

CUPLA

General Catalog

CUPLA enables flexible and fast connections in various fluid lines.

Nitto Kohki's unique technologies and dedicated research have been proven by numerous patents, which led to the development of 25000 different CUPLA variations.

CUPLA

Quick Connect Couplings

- Applications diversify from general household to high-tech industries such as in oceanic and space development.
- Numerous sizes are available for various needs.
- Wide varieties of body materials such as steel, brass, plastic, aluminum or stainless steel are available.

Quick Connect Couplings

Nitto Kohki's quick connect couplings, "CUPLA" enables speedy connections/disconnections of various pipings, such as air, water, oil and gas.

They are active in various industrial fields, thanks to the experience in development of 25000 different variations.

Wide varieties of body materials such as steel, brass, aluminum, stainless steel and plastic are available to match every customer's needs.

For easy replacements	Replacements of pneumatic/hydraulic tools, pneumatic/hydraulic cylinders, mold attachments, etc.
For temporary installation in test line	Vacuum tests, pressure durability tests, leakage tests, running tests, etc.
For filling	For filling up various industrial gases, including inert gases, nitrogen, LPG, carbon dioxide, oxygen, fuel gas, etc.
For maintenance services	For computer cooling system, hydraulic cylinders in die-casting machines.
As joints	Applications other than fluid transfer covering connections for holding works while anchored or carried around.

A profusion of patented technology crystallized in global users recognition of high quality.

ISO 9001 and ISO 14001 Certification Award

"CUPLA" quick connect couplings are produced as the crystallization of high-grade know-how nurtured in the fields of fluid engineering and materials engineering, and top level precision machining technology. Having assessed Nitto Kohki consistent quality assurance and control system ranging from design and development through procurement of material, manufacture, assembly, and shipping, the Japan Quality Assurance Organization, authority for inspection and registration, awarded us "ISO 9001", international standard for quality management systems, and "ISO 14001", international standard for environment management systems intended to perform global environment preservation and pollution control. High reliability built on unparalleled "high quality" and accumulated history of "productivity" for stable supply. CUPLA is receiving overwhelming support from many users spread all over the world as the top brand for fluid energy transmission and control.

CUPLA

CUPLA enables flexible and fast connections in various fluid lines.

⚠ Beware of imitations

Recently on the market, there have appeared similar products that invite misidentification or confusion with Nitto Kohki couplings, or such products that claim to have compatible mating parts. Nitto Kohki cannot accept responsibility for any accident that may result by mixed use with a coupling of another brand that seems connectable to a Nitto Kohki coupling. CUPLA is produced with their own unique tolerances and precision under strict quality control, and are not interchangeable with other couplings that are not under such tolerances. Therefore, connection to other brand of coupling may end up with abrupt breakdown or personal injury. Please be sure to check for our marks below, which are always inscribed on CUPLA products, when you order and purchase.

NEW

The flow of cooling water can be checked at a glance.

For checking the water flow of mold cooling water pipes

FLOW MONITOR Replaceable Flow Vane type

- Fluid flow from low flow rate (2 L/min) water pipes can be visually checked with the rotating two-colored impeller.
- Flow Vane ASSY can be replaced without removing it from the piping.
- The stopper prevents unintended removal of the plastic parts.
- Installation and replacement is easy since the screw part of the T2 side rotates freely to the left and right.

Check the flow with the rotating two-colored impeller.

Can be replaced when dirty.

Nitto Kohki's environmentally-friendly Manufacturing

The coexistence of mankind and nature. Each company is now asked for a global level environmental conservation and improvement as important themes. As a part of the environmental improvement activities, we are offering various products such as "couplings", "machines and tools", "screwdrivers", "air compressors and vacuum pumps", and "door closers" as green procurement products.

"CUPLA" active in the widespread field of the manufacturing industry.

Coupling for fuel cell vehicles.

HHV CUPLA

HHV CUPLA

CUPLA for fueling high pressure hydrogen

Fuel cell vehicles are one of the remarkable environmental conservation solutions. In order to respond quickly to environmental problems, Nitto Kohki has developed the first coupler in Japan to supply and fill its fuel source, high-pressure pure hydrogen.

HHV CUPLA
70 MPa

Nitto Kohki's environmentally-friendly Manufacturing Green Procurement

Nitto Kohki has made every effort in developing "Environmental Improvement Plans" through the implementation of ISO14001, to execute environmentally conscious business activities on a company-wide basis. As a part of our ongoing commitment to the environment, we are also committed to reduce and/or exclude restricted chemical substances from our products as designated by RoHS directives, laws and regulations of chemical substances. Some products may not be compliant, so please check our corporate website for the latest status.

All couplings except for the following products have been switched to green procurement compliant products.

- LEVER LOCK CUPLA
 - All CUPLA products with Tube Fitter
 - CUPLA CONNECTING JIG
- Non compliant

Please visit our website for applicable products.

CUPLA

Products using regulated substances and the countermeasures taken

Products
(Standard CUPLA)

Major countermeasures

Products using brass material

Low cadmium contained material used
(RoHS directive compliant material)

Zinc chrome plated couplings

Hexavalent chromium-free plated
(Such as nickel plated)

Note: Color of plating

The color of the zinc chrome plating is yellow, while nickel plating is silver. Some products may look different in appearance when changed.

Select Appropriate CUPLA for the Job

Nitto Kohki has the wide range of CUPLA products covering almost every application and feature you need. In order to select an appropriate CUPLA for your job, you need to realize the following specifications.

Specifications to Be Checked When Selecting CUPLA

Fluid and the Temperature	Select CUPLA with body and seal materials that suit the fluid and its temperature.	There are different body and seal materials to suit different fluids. For example, we recommend steel HI CUPLA for air, and brass or stainless steel for water. Please refer to Body Material Selection Table and Seal Material Selection Table at the end of this catalog for details about the correspondence between fluids and materials.
Fluid Pressure	Select CUPLA suitable for the actual maximum fluid pressure.	Fluid pressure is also a key to CUPLA selection. Each series of hydraulic CUPLA have different structures to cope with each pressure resistance ranges up to 68.6 MPa (700 kgf/cm ²).
Automatic Shut-off Valve	Select CUPLA with a valve structure that suits the piping application.	Valve combinations are two-way shut-off, one-way shut-off, or straight through types. Choose carefully. Unless it is a two-way shut-off type, the internal fluid will flow out when it is disconnected.
Operating Environment	Select CUPLA with design and materials that suit each operating environment.	In choosing the type of CUPLA, body material and seal material, consider the temperature range, and/or corrosive atmosphere in the operating environment.
Size and Type of End Configurations	Finally and critically specify the size and type of end configurations.	Having checked the type and materials for CUPLA, now specify the size and type of end configurations to suit the type of piping. Choose carefully, as the size affects the fluid flow rate. <small>Note: End configuration and size may be limited by the type of CUPLA.</small>

Hose barb		Female thread	
Male thread		Nut	

You can search "CUPLA" at our web site. (www.nitto-kohki.co.jp/e/) Please take a visit.

If you cannot find a suitable CUPLA product, please contact us via our web site or enter the above details in the "CUPLA Inquiry Form" at the end of this catalog and send it to us by fax or post.

Semi-standard CUPLA Series

"Semi-standard CUPLA Series" are products with an already established record but are not standard stock items.

CUPLA Safety Mechanism

CUPLA with Single Lock (BL/PL)

P157

Accidental disconnection prevention mechanism

CUPLA with Safety Lock (SL)

P157

Accidental disconnection prevention mechanism

For High Pressure

HSP-DC CUPLA

P158

For hydraulic pressure up to 20.6 MPa (210 kgf/cm²)

Working pressure : 20.6 MPa (210 kgf/cm²)
Body material : Special steel (Nickel plated)
Application : 1/4" to 1"
Seal material : NBR

TSP-HP CUPLA (for High Pressure)

P162

High pressure and general purpose type

Working pressure : 9.0 MPa (92 kgf/cm²)
Body material : Stainless steel
Application : 1/4" to 1/2"
Seal material : NBR, EPDM

For Temperature Controllers

HI FLOW CUPLA

P159

For piping to control temperatures
Applicable fluid: Water, Heat transfer fluids

Working pressure : 1.0 MPa (10 kgf/cm²)
Body material : Stainless steel, Brass
Application : 1/4" to 1/2"
Seal material : EPDM, FKM

HI FLOW CUPLA BI Type

P160

HI FLOW CUPLA with ferrule flange mount
Applicable fluid: Water, Heat transfer fluids

Working pressure : 1.0 MPa (10 kgf/cm²)
Body material : Stainless steel
Application : 1/8" to 1/2"
Seal material : EPDM, FKM

For Medium Pressure

SP CUPLA Type A PV Type

P161

Connectable with residual pressure with Purge Valve

Working pressure : 2.0 to 4.5 MPa (20 to 46 kgf/cm²)
Body material : Brass, Stainless steel
Application : Rc 3/4 to Rc 1 1/2
Seal material : NBR

For Low Pressure (air)

PLASTIC CUPLA BC Type

P162

Valveless type for low pressure air piping

Working pressure : 0.07 MPa (0.7 kgf/cm²)
Body material : Plastic
Application : 1/4", 3/8"
Seal material : NBR

When placing your order

Please select your appropriate combination from the column in each product page (on the right beside the product name) then decide the seal and body materials from the selection tables listed at the end of the catalog.

Accessories

Accessories

DIP MOLD DUST CAP

P163

DUST CAPS for HI CUPLA, SP CUPLA Type A, TSP CUPLA, ZEROSPILL CUPLA and HYDRAULIC CUPLA

SAFETY CAP

P163

Metal caps for HI CUPLA Series, SP CUPLA Type A, TSP CUPLA and HYDRAULIC CUPLA

Semi-standard

DUST CAP

P164

DUST CAP Plastic Cap for HI CUPLA Series and FULL BLOW CUPLA

For FULL BLOW CUPLA

For HI CUPLA Series

DUST CAP

P164

Dedicated polyethylene cap for HYGIENIC CUPLA

SLEEVE COVER

P164

Plastic cover for FULL BLOW CUPLA

PROTECTION COVER

P164

Plastic Cover for NUT CUPLA and FULL BLOW CUPLA Nut Type

SLEEVE STOPPER

P165

Sleeve Stopper for SP CUPLA Type A

ACCESSORIES FOR O-RING MAINTENANCE

P165

Jigs & grease for replacement of O-rings for couplings For SP CUPLA Type A, TSP CUPLA, HOT WATER CUPLA, ZEROSPILL CUPLA, HSP CUPLA, HSU CUPLA and HYGIENIC CUPLA

RESIDUAL PRESSURE RELEASE JIG

P166

Residual Pressure Release Jig for SP CUPLA and HYDRAULIC CUPLA

Semi-standard

CUPLA ADAPTER for Braided Hose Connection

P166

Mounts on CUPLA plug / socket with female thread

FLOW MONITOR Replaceable Flow Vane type

P167

For checking the water flow of mold cooling water pipes

NEW

FLOW METER

P168

Flow meter with special valve for mold cooling line

PURGE ADAPTER

P169

Residual Pressure Purge Adapter for Hydraulic Lines

CUPLA CONNECTING JIG

P170

Connecting Jig for large CUPLA

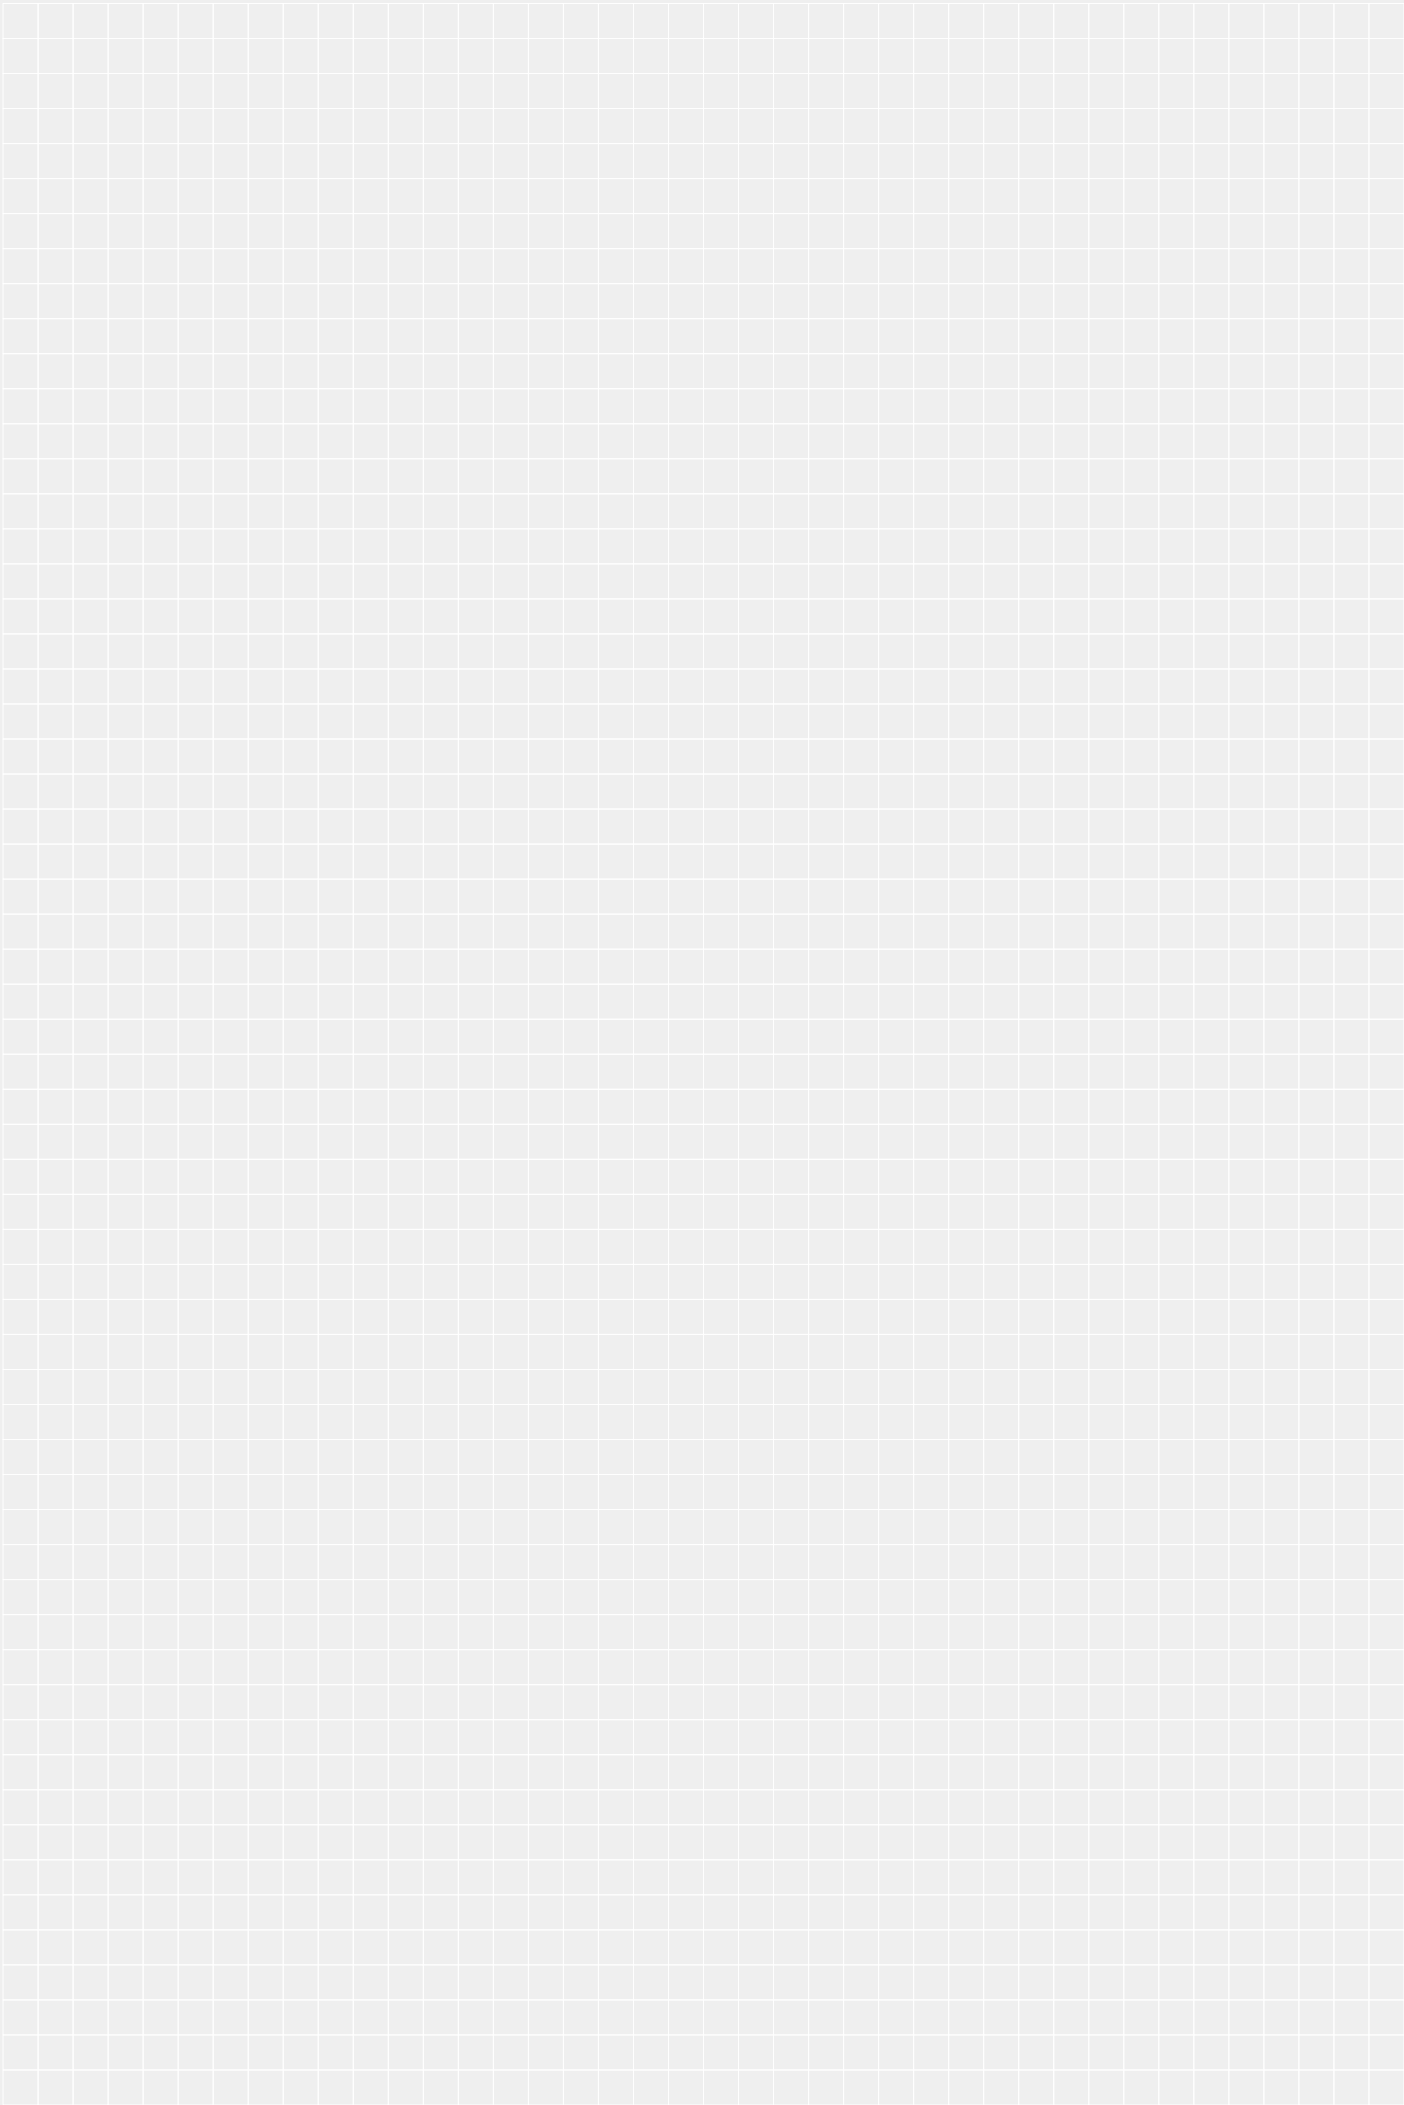

Special Made-to-Order CUPLA

Nitto Kohki is developing couplings with various functions and specifications to suit respective user's applications. CUPLA products on this page are examples of such.

Special made-to-order couplings are supplied based upon the specific instructions / specifications detailed by the customer. Once written acceptance of our final drawing / specifications of CUPLA is received from the customer we formally accept this as a final order. It is essential, as the customer, to carry out a performance test of the special made-to-order CUPLA, in its specific usage conditions, for assurance of safety and adaptability to the hoses, pipes or devices used in the application. Use of the made-to-order CUPLA in any application or condition other than those specified in the design drawing, will exclude Nitto Kohki from any liabilities for any special, indirect or consequential loss or damages.

For Inert Gases	For Gases and Liquids (PIPE CUPLA Series)	For Inert Gas and Vacuum	For High Purity Chemicals	Automatic MULTI CUPLA
CHARGE CUPLA cs Type For industrial gases Connectable to SP-V CUPLA plugs Valve structure Two-way shut-off Working pressure : 3.0 MPa (31 kgf/cm ²) Body material : Stainless steel (part Aluminum alloy and Brass) Application : 1/4" Seal material : CR, HNBR	PCB CUPLA For expanded pipes Valve structure Straight through Working pressure : To be defined after consultation. Body material : Brass (part Stainless steel) Pipe sizes : To be complied with your requirements. Seal material : CR, FKM, NBR	PCA CUPLA Pipes for high pressure line Valve structure Straight through Working pressure : To be defined after consultation. Body material : Brass (part Stainless steel and Steel) Pipe sizes : To be complied with your requirements. Seal material : CR, FKM, NBR	SEMICON CUPLA SML Type For semiconductor manufacturing equipment Valve structure Two-way shut-off Working pressure : 0.2 MPa (2 kgf/cm ²) Body material : Stainless steel Application : 1/8", 1/4" Seal material : FKM, EPDM, others	MULTI CUPLA AMCS-FA Type Full automatic operation type Valve structure Two-way shut-off Working pressure Body material Application Seal material To be decided after consultation.
CHARGE CUPLA CNR Type For industrial gases Connectable to SP-V CUPLA plugs Valve structure Two-way shut-off Working pressure : 4.5 MPa (46 kgf/cm ²) Body material : Stainless steel (part Aluminum alloy and Brass) Application : 1/4", 3/8", 1/2" Seal material : CR, HNBR	PCBW CUPLA For bulged pipes and spool pipes Valve structure Straight through Working pressure : To be defined after consultation. Body material : Brass (part Stainless steel) Pipe sizes : To be complied with your requirements. Seal material : CR, FKM, NBR	PCIO CUPLA For pipes that have inner locking system Valve structure Straight through Working pressure : To be defined after consultation. Body material : Stainless steel (part Brass) Pipe sizes : To be complied with your requirements. Seal material : CR, FKM, NBR	SEMICON CUPLA scf Straight Type For semiconductor manufacturing equipment •see page 148 Valve structure Two-way shut-off Working pressure : 0.2 MPa (2 kgf/cm ²) Body material : Fluorine contained resin Application : 3/8", 1/2" Seal material : FEP-coated FKM, Fluoro-resin	MULTI CUPLA AMCS-SA Type Semi-automatic type Valve structure Two-way shut-off Working pressure Body material Application Seal material To be decided after consultation.
AUTO CUPLA AC Type For industrial gases Connectable to SP-V CUPLA plugs Valve structure Two-way shut-off Working pressure : 3.0 MPa (31 kgf/cm ²) Body material : Stainless steel (part Aluminum alloy and Brass) Application : 1/4", 3/8" Seal material : CR, HNBR, NBR	PCP CUPLA For bulged pipes and spool pipes Valve structure Straight through Working pressure : To be defined after consultation. Body material : POM (Polyacetal), part Stainless steel Pipe sizes : To be complied with your requirements. Seal material : CR, FKM, NBR	PCD CUPLA For pipes of special shapes Valve structure Straight through Working pressure : To be defined after consultation. Body material : Stainless steel (part Aluminum alloy) Pipe sizes : To be complied with your requirements. Seal material : CR, FKM, NBR	For Water	
AUTO CUPLA acv Type For industrial gases Connectable to SP-V CUPLA plugs Valve structure Two-way shut-off Working pressure : 3.0 MPa (31 kgf/cm ²) Body material : Stainless steel (part Aluminum alloy and Brass) Application : 1/4", 3/8" Seal material : CR, HNBR, NBR	PCBL CUPLA For straight pipes Valve structure Straight through Working pressure : To be defined after consultation. Body material : Stainless steel (part Brass) Pipe sizes : To be complied with your requirements. Seal material : CR, FKM, NBR	AUTO CUPLA For copper pipes Valve structure Straight through Working pressure : To be defined after consultation. Body material : Stainless steel (part Brass) Pipe sizes : To be complied with your requirements. Seal material : CR, FKM, NBR	AIRLESS CUPLA For physical and chemical devices Valve structure Two-way shut-off Working pressure : 3.0 MPa (31 kgf/cm ²) Body material : Stainless steel Application : 3/8", 1/2" Seal material : FKM, EPDM	
AIRLESS CUPLA cna Type For industrial gases Valve structure Two-way shut-off Working pressure : 3.0 MPa (31 kgf/cm ²) Body material : Stainless steel Application : 3/8" Seal material : CR, HNBR	PCL CUPLA For straight pipes Valve structure Straight through Working pressure : To be defined after consultation. Body material : Brass (part Steel) Pipe sizes : To be complied with your requirements. Seal material : CR, FKM, NBR	SCREW CUPLA pcs Type For vacuum and pressure testing Please consult with us for larger sizes. Valve structure Straight through Working pressure : 3.0 MPa (31 kgf/cm ²) Body material : Steel (part Stainless steel) Application : 7/16" to 7/8" Seal material : CR, NBR, FKM	For Manipulators	
PCW CUPLA For straight pipes Valve structure Straight through Working pressure : To be defined after consultation. Body material : Brass (part Stainless steel and Steel) Pipe sizes : To be complied with your requirements. Seal material : CR, FKM, NBR	For Pneumatics and Hydraulics		MP CUPLA For manipulators Valve structure Two-way shut-off Working pressure : 5.0 MPa (51 kgf/cm ²) Body material : Stainless steel Application : 1/4" to 1" Seal material : FKM, others	AUTOMATIC DISCONNECTION CUPLA For fail safe system and automatic connection/disconnection applications Valve structure Two-way shut-off Working pressure Body material Application Seal material To be decided after consultation.
SCREW CUPLA ncm Type For connecting pneumatic/hydraulic lines Valve structure Straight through Working pressure : 14.0 MPa (142 kgf/cm ²) Body material : Steel (Plated) Application : 1/8" to 1" Seal material : NBR			When placing your order Please ask about the details, since CUPLA products in this group are special made-to-order items.	

HI CUPLA Series Interchangeability

Following plugs and sockets can be connected with each other

Examples of air line connections using HI CUPLA group models

Air distribution is one of the typical piping systems. Various HI CUPLA Series models meet all needs of air piping from main supply, relays in factories, pipe end connections to pneumatic tools, and those of air piping within equipment. The following sketch gives you some examples of air piping using HI CUPLA Series and may serve as a good reference in selecting appropriate CUPLA products.

For Low Pressure

MICRO CUPLA

For piping in pneumatic control devices

Working pressure

1.0 MPa
{10 kgf/cm²}

Valve structure

One-way shut-off

Applicable fluids

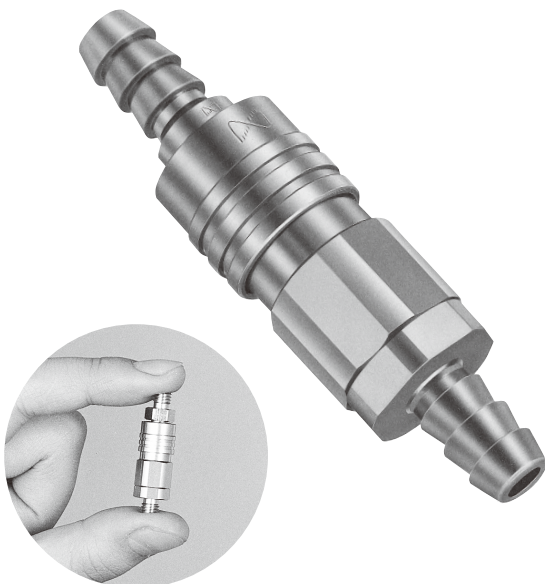

Air

Water (Tube Fitter type is unsuitable for water.)

Compact, lightweight CUPLA with only 9.5 mm outer diameter. Push-to-connect operation. Tube Fitter type for even easier tube insertion.

- Even though the valve is built in the socket, the sleeve outer diameter is confined to 9.5 mm.
- Push-to-connect design.
- Compact design for piping in narrow spaces.
- Plated brass and stainless steel bodies are available for excellent corrosion resistance.
- Available in various end configurations to satisfy a wide range of pneumatic applications.

Note: Fluid will flow out from the plug side when disconnected.
Take necessary precaution if the fluid is water.

Specifications

Body material		CUPLA : Brass (Plated), Stainless steel (SUS304) Tube Fitter Part : Brass (Plated) , Plastic			
Size	Thread	1/8" , M5×0.8			
	Tube barb	Tube ID ø3, ø4			
	Tube barb (Tube fitter) *1	Polyurethane tube: Outside Dia. ø4 ± 0.1, ø6 ± 0.1 Polyamide tube: Outside Dia. ø4 ^{+0.05} _{-0.08} , ø6 ^{+0.05} _{-0.08} Fluorine contained resin tube: Outside Dia. ø4 ± 0.05, ø6 ± 0.07			
Pressure unit		MPa	kgf/cm ²	bar	PSI
Working pressure		1.0	10	10	145
Seal material *2		Seal material	Mark	Working temperature range	Remarks
Working temperature range *3		Nitrile rubber	NBR	-20°C to +80°C	Standard material
		Fluoro rubber	FKM	-20°C to +180°C	Made-to-order item

- Above specifications apply only to CUPLA. Maximum working pressure and working temperature range may vary depending on tube materials you use with and the working temperature.

*1: When connecting an extremely soft tube such as soft polyurethane or soft nylon, attach the insert ring specified by the tube manufacturer to the inner diameter of the tube to be connected.

*2: Combinations of the seal material and the valve material are as follows (Seal material/Valve material: NBR/ Resin, FKM/Metal). For tube fitter type, the seal material is NBR only.

*3: The operable temperature range depends on the operating conditions.

Maximum Tightening Torque

Nm {kgf·cm}

Size (Thread)		M5×0.8	R 1/8
Torque	Brass	1.3 {13}	5 {51}
	Stainless steel		7 {71}

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Interchangeability

Sockets and plugs can be connected regardless of end configurations.

Minimum Cross-Sectional Area

(mm²)

For Low Pressure

SMALL CUPLA

Lightweight and compact for use on air lines and scientific equipment

Working pressure

1.0 MPa
(10 kgf/cm²)

Valve structure

One-way shut-off

Applicable fluids

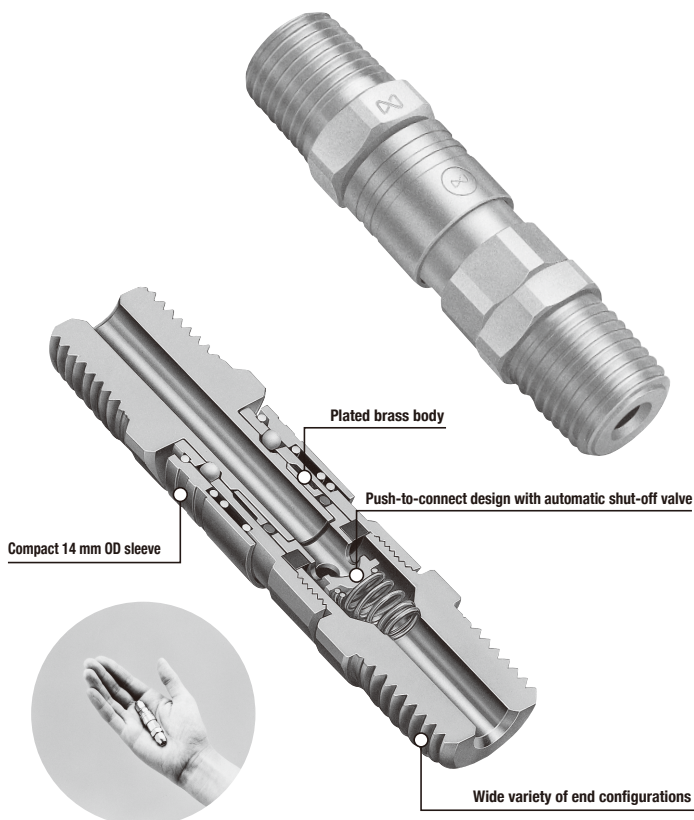

Air

Water (Tube Fitter type is unsuitable for water.)

Lightweight and compact push-to-connect operation. Responding to requirements of modular combinations.

- Compact socket with built-in valve and 14 mm OD sleeve.
- Suits applications calling for compact and modular components.
- Just push in the plug to the socket for connection by easy one hand operation.
- Plated brass for corrosion resistance adopted for the body.
- Stable performance for long life.
- A wide line-up of end configurations (female and male threads, hose barbs, manifolds) enables suitability with a wide range of piping applications such as pneumatic, scientific and medical equipment.
- Also available with quick connect/disconnect Tube Fitter type.

Note: Fluid will flow out from the plug side when disconnected.
Take necessary precaution if the fluid is water.

For Low Pressure

COMPACT ZERO SPILL CUPLA

Small, high flow type for coolant piping

Working pressure

1.0 MPa
(10 kgf/cm²)

Valve structure

Two-way shut-off
(Spill Reduction)

Applicable fluids

Air

Water

For coolant piping of electronic equipment for supercomputers, data centers and other non-spill environments. Small but high flow rate for efficient cooling.

- Compact size saves space.
Outer diameters of 16 mm (CZL-1SM) and 18.5 mm (CZL-2SM)
- High flow rate for efficient cooling.
- Easy operation, push-to-connect function.
- Valve structure reduces air inclusion on connection and liquid spillage when disconnecting.

CZL-2SM	Rc 1/4	49	(55.5)	18.5	Hex.16	R 1/4

Applications

Compact

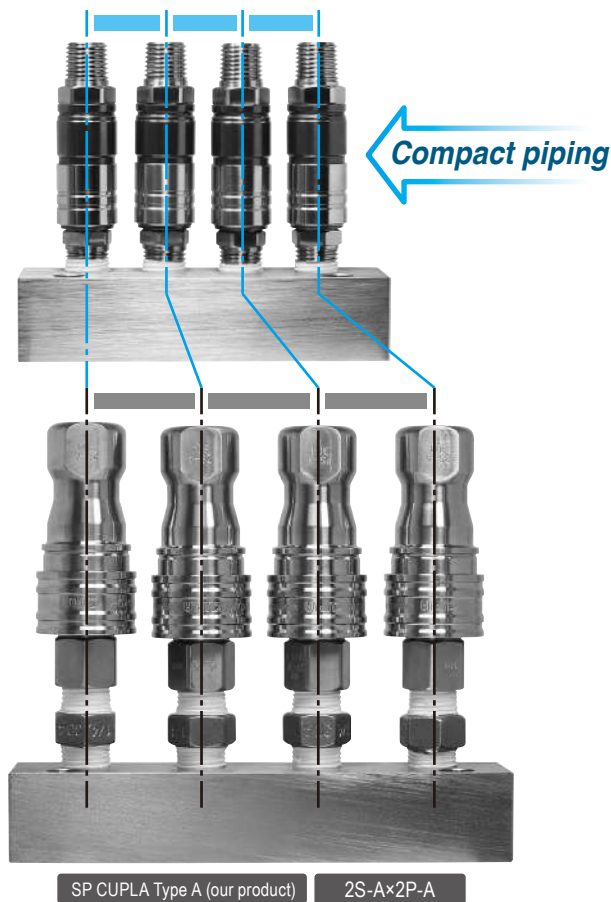

Piping in tight space is possible.
For compact piping.

High flow

Small but high flow rate.
For efficient cooling.

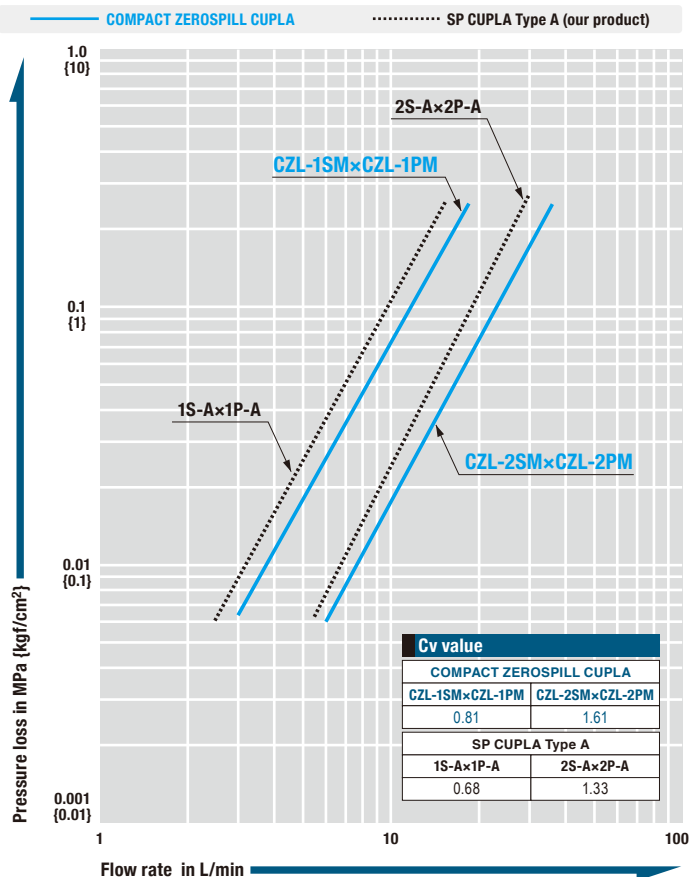

COMPACT ZERO SPILL CUPLA

CZL-2SM×CZL-2PM

Flow Rate - Pressure Loss Characteristics

[Test conditions] - Fluid: Water - Temperature: 23°C to 26°C

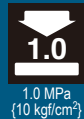

For Low Pressure

COMPACT CUPLA

Small multipurpose type for low pressure lines

Working pressure

Valve structure

Applicable fluids

Compact 17.5 mm outer diameter, yet socket and plug have built-in automatic shut-off valves.

- Both socket and plug have built-in automatic shut-off valves.
- Compact size with maximum outer diameter 17.5 mm.
- For small bore piping from temperature control piping to scientific equipment.
- Body materials in stainless steel (SUS304) or brass, excellent in corrosion resistance.
- Four types of end configuration enable suitability with a wide range of piping applications.

Specifications

Body material		Brass, Stainless steel (SUS304)			
Size	Thread	1/8"			
	Tube barb	Polyamide tube : $\phi 4 \times \phi 6$, $\phi 6 \times \phi 8$ Polyolefin tube : $\phi 4 \times \phi 6$, $\phi 6 \times \phi 8$ Fluorine contained resin tube : $\phi 4 \times \phi 6$, $\phi 6 \times \phi 8$			
Pressure unit		MPa	kgf/cm ²	bar	PSI
Working pressure		1.0	10	10	145
Seal material		Seal material	Mark	Working temperature range	Remarks
Working temperature range *1		Fluoro rubber	FKM	-20°C to +180°C	Standard material
		Ethylene-propylene rubber	EPDM	-40°C to +150°C	Available on request

- Maximum working pressure and working temperature range of nut type depend on the tube material and its dimensional tolerance.

*1: The operable temperature range depends on the operating conditions.

Maximum Tightening Torque

N m {kgf·cm}

Size (Thread)		1/8"	Tube barb
Torque	Brass	5 {51}	5 {51}
	Stainless steel	9 {92}	7 {71}

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Interchangeability

Sockets and plugs can be connected regardless of end configurations.

Minimum Cross-Sectional Area

(mm²)

Model	CO-1SM×CO-1PM	CO-1SF×CO-1PF	CO-40SN×CO-40PN	CO-60SN×CO-60PN
Minimum cross-sectional area	8.8	8.8	4.9	8.8

Suitability for Vacuum

1.3×10^{-1} Pa { 1×10^{-3} mmHg}

Socket only	Plug only	When connected
—	—	Operational

Admixture of Air on Connection

May vary depending upon the usage conditions.

(mL)

Volume of air admixture	0.34
-------------------------	------

Volume of Spillage per Disconnection

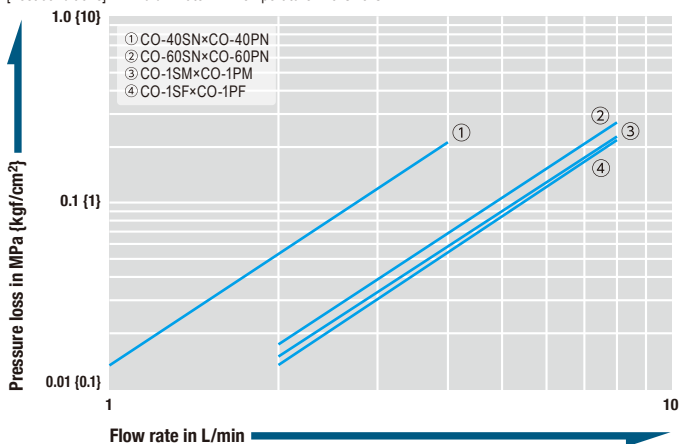

May vary depending upon the usage conditions.

(mL)

Volume of spillage	0.23
--------------------	------

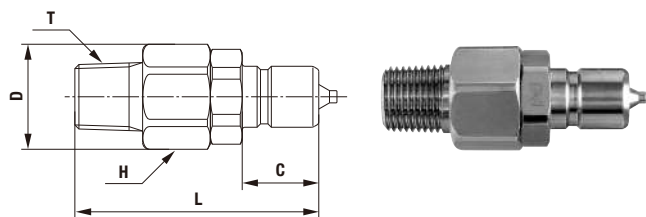

Flow Rate – Pressure Loss Characteristics

[Test conditions] - Fluid : Water - Temperature : 23°C±5°C

Application Example

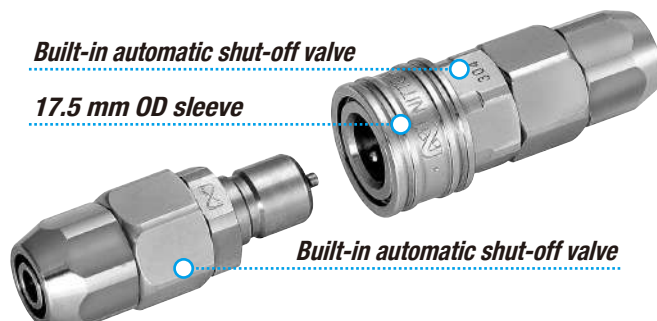

For branch piping

For branch piping

Built-in automatic shut-off valve

17.5 mm OD sleeve

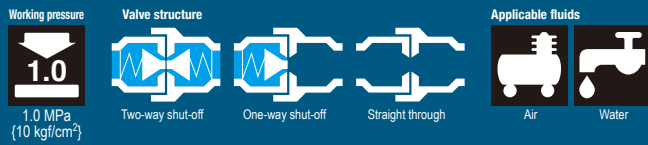

Built-in automatic shut-off valve

For Low Pressure

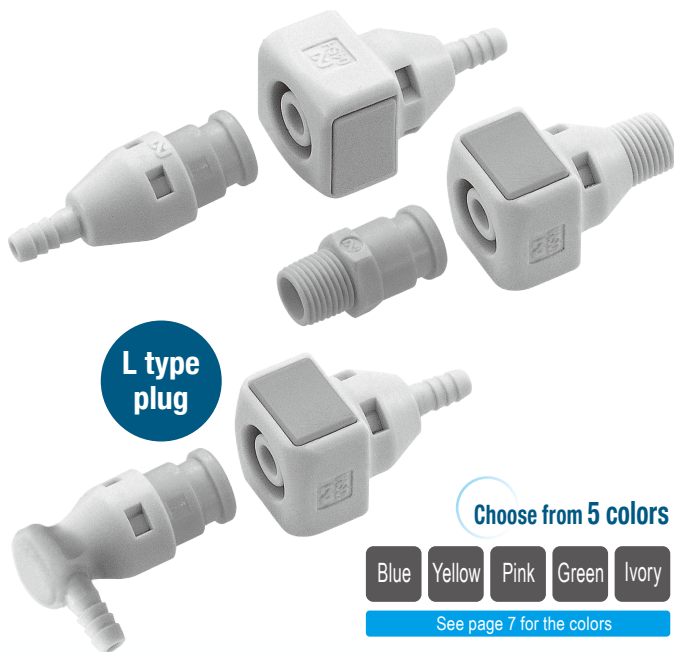

CUBE CUPLA

Small and lightweight coupling for air supply lines.

Both socket and plug have built-in valve types and valveless types. Simple one action for connection or disconnection. Lightweight plastic coupling.

- In all five color variations to prevent piping mistakes.
- Ultra-lightweight, made of polyacetal resin. Compact design for space saving.
- Just push plug into socket for connection. Simply press the button on the socket for disconnection.
- Two-way shut-off type with valve on both sides and straight through type with low pressure loss are available.
- L type plug is suitable for piping in narrow spaces are available.
- Socket and plug cannot be disconnected unless two buttons on the socket are pressed simultaneously.

Push the buttons for quick disconnection

Push button for disconnection

Simple operation to push the buttons on the socket.

Specifications

Body material	Polyacetal resin (POM)			
Size	4 mm and 6 mm ID tube, 1/8"			
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	1.0	10	10	145
Seal material	Seal material	Mark	Working temperature range	Remarks
Working temperature range *1	Nitrile rubber	NBR	-20°C to +60°C	Standard material

*1: The operable temperature range depends on the operating conditions.

Tightening Torque Range

Nm {kgf·cm}

Size (Thread)	R 1/8
Torque	0.9 to 1.1 {9.2 to 11}

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Interchangeability

Sockets and plugs can be connected regardless of end configurations.

*Do not use in the combination of valved sockets and valveless plugs.

The valve in the socket will not open and the fluid will not flow.

Connection capability

Select the combination of models suitable to your applications

Connection capability		Plug	
Socket	Valve	With	Without
	With	 Two-way shut-off	Not connectable
	Without	 One-way shut-off	 Straight through

Note: When disconnected, the fluid from the valveless side will flow out. Take care if the fluid is water.

Minimum Cross-Sectional Area (-VL means Valve less type) (mm²)

Applicable fluid

The lightweight design is suitable for power tools!
Push-to-connect for easy operation.

- Lightweight design suits direct connection to power tools. Aluminum body is adopted for some models to reduce the weight.
- Just push the plug into socket for easy one hand connection.
- Available in various end configurations for a wide range of pneumatic applications.
- Model 02S20P can be connected with sockets of HI CUPLA Models 10, 17, 20, 30, 40 and 60.
- Also available with quick connect/disconnect Tube Fitter type.

PN Type, SN Type
9 to 11 {92 to 112}

To mount on urethane hose, slide it over to the hose barb and tighten the nut until it is flush against the hose barb base. It is recommended that grease GRE-M1 is applied to the inside of the nut (threaded part and hose contact part) for easy tightening.

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Interchangeability

Sockets and plugs can be connected regardless of end configurations and sizes.

*Interchangeable with MOLD CUPLA.

*Sockets of HI CUPLA models 10, 17, 20, 30, 40, and 60 can be connected when 02S20P is used.

For Low Pressure

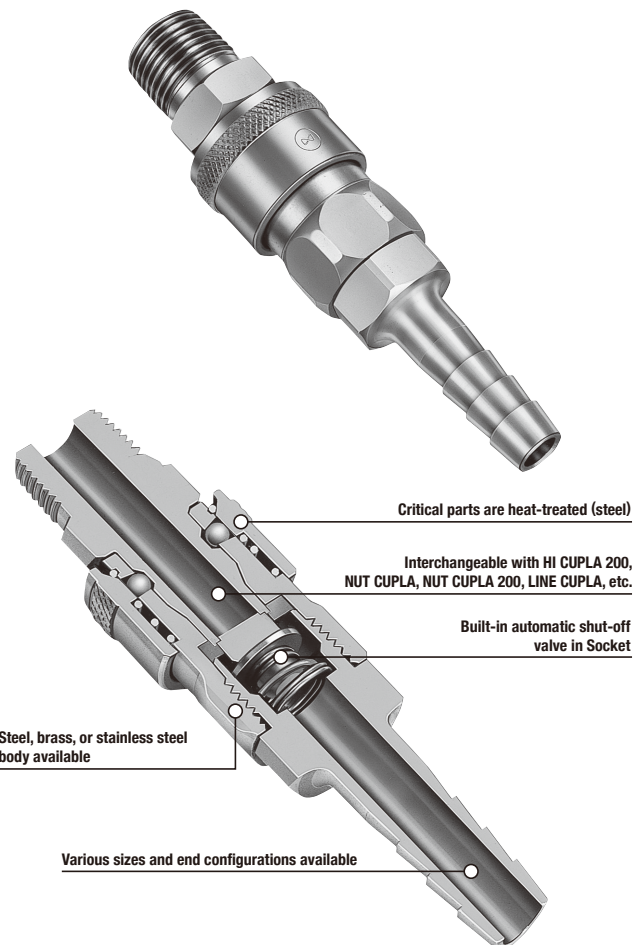

HI CUPLA

Universal purpose couplings for air lines

From factory air line to pneumatic tool connection, available in various body materials, sizes and end configurations. Excellent durability.

- An excellent general purpose coupling for connecting factory air supply to pneumatic tools.
- Steel coupling is suitable for air. Brass or stainless steel is suitable for water. Note that fluid will come out from the plug when disconnected.
- Critical structural parts of steel models are heat-treated for increased strength giving greater durability and resistance to wear.
- Available in various body materials, sizes and end configurations applicable to a wide range of applications.

Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

*1 : D = 25.4 for brass and stainless steel models.

*2 : H = Hex. 22 for brass and stainless steel models.

*3 : H = Hex. 17 for brass and stainless steel models.

*4 : B = 9 for brass and stainless steel models.

Plug and tube can be connected in one push-to-connect operation.

Just push the tube into CUPLA and then it is locked.

Polyurethane, Polyamide and Fluorine contained resin tubes.

PC type
(Tube Fitter)

For Low Pressure

HI CUPLA BL

Universal purpose couplings with separation prevention mechanism for air lines

Working pressure

1.5 MPa
(15 kgf/cm²)

Valve structure

One-way shut-off

Applicable fluids (Steel applies to air only)

Air

Water

Separation prevention mechanism is easily locked by turning the sleeve after connection.

- Separation prevention mechanism prevents accidental disconnection.
- An excellent general purpose coupling for connecting factory air supply to pneumatic tools.
- Steel coupling is suitable for air.
- Stainless steel is suitable for water.
- Note that fluid will come out from the plug when disconnected.
- Critical structural parts made of steel are heat-treated for increased strength giving greater durability and resistance to wear.
- Various body materials, sizes, and end configurations are available.
- SN-BL type for connection to urethane hose requires no hose clamp.

Specifications

Unlocked

Align the cutout in the sleeve with the ball stopper, and pull the sleeve to connect the plug.

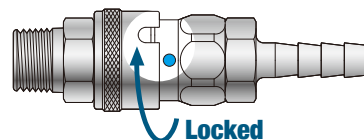

The stopper is marked with blue for visual understanding.

Locking the sleeve

Without alignment of the cutout with the ball stopper disconnection cannot be made.

Accidental disconnection is prevented.

Align the cutout in the sleeve with the ball stopper, and pull the sleeve for disconnection.

For Low Pressure (Air)

HI CUPLA 200

Push-to-connect type for air lines

Working pressure

1.5 MPa
(15 kgf/cm²)

Valve structure

One-way shut-off

Applicable fluid

Air

Simple and secure push-to-connect type! Big flow rate! End-face seal design. Gives excellent handling touch.

- Just push the plug into the socket for simple and secure connection. This reduces connection time and improves efficiency.
- New valve design for low pressure loss to achieve flow rate increase (15% up over the conventional model).
- End-face seal is achieved when connected.
- Enhanced operability with low connection resistance.
- End-face seal design is superior to external seal with an O-ring due to no seal damage caused by exhausted lubrication.
- Available only with steel body. Not suitable for water or oil.
- Also available with quick connect/disconnect Tube Fitter type.

▼ With Tube Fitter

Specifications

Body material		Steel (Chrome plated)			
Size	Thread and hose barb	1/4", 3/8", 1/2"			
	Tube barb (Tube fitter) *1	Polyurethane tube: Outer dia. $\phi 6 \pm 0.1$, $\phi 8 \pm 0.15$, $\phi 10 \pm 0.15$			
		Polyamide tube: Outer dia. $\phi 6^{+0.05}_{-0.08}$, $\phi 8^{+0.05}_{-0.1}$, $\phi 10^{+0.05}_{-0.1}$			
		Fluorine contained resin tube: Outer dia. $\phi 6 \pm 0.07$, $\phi 8 \pm 0.07$, $\phi 10 \pm 0.07$			
Pressure unit		MPa	kgf/cm ²	bar	PSI
Working pressure		1.5	15	15	218
Seal material		Seal material	Mark	Working temperature range	Remarks
Working temperature range *2		Nitrile rubber	NBR	-20° C to +60° C	Standard material

- Above specifications apply only to CUPLA. Maximum working pressure and working temperature range may vary depending on tube materials you use with and the working temperature.

*1: When connecting an extremely soft tube such as soft polyurethane or soft nylon, attach the insert ring specified by the tube manufacturer to the inner diameter of the tube to be connected.

*2: The operable temperature range depends on the operating conditions.

Maximum Tightening Torque

Nm {kgf·cm}

Size (Thread)	1/4"	3/8"	1/2"
Torque	14 {143}	22 {224}	60 {612}

Flow Direction

Fluid must run from socket to plug.

Interchangeability

Interchangeable with plugs of HI CUPLA models 10, 17, 20, 30 and 40.

Interchangeable with each models of NUT CUPLA series and HI CUPLA series (except models 400, 600, and 800). Please see [page 21](#) for "HI CUPLA Series Interchangeability".

Model	Application (Tube)	Mass (g)	Dimensions (mm)	
			L	øB
200-60SC	For 6 mm OD tube	100	(64)	5
200-80SC	For 8 mm OD tube	105	(67.5)	6.5
200-100SC	For 10 mm OD tube	123	(70.5)	8.5

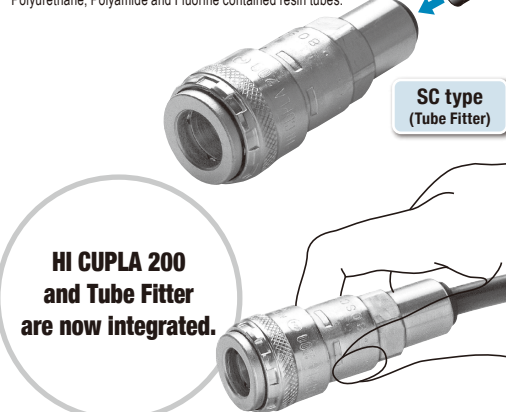

* The outer dimensions of Model 200-100SC are a little bit different from those of other models.

Application example

Socket and tube can be connected in one push-to-connect operation.

Just push the tube into CUPLA and then it is locked.
Polyurethane, Polyamide and Fluorine contained resin tubes.

Major applications: miniature pneumatic equipment, automatic control equipment, physicochemical equipment and medical devices.

Just push in for quick connection.

For Low Pressure (Air)

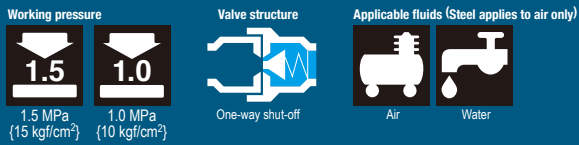

HI CUPLA for Connection to Braided Hoses

NUT CUPLA

NUT CUPLA 200

ROTARY NUT CUPLA

For connection to urethane hose, braided hose

No hose clamp required!
Fitted with hose guard nut to prevent possible kinking.
HI CUPLA for connection to braided hoses is now available.

- Nut types are available in HI CUPLA Series and HI CUPLA 200 Series. Hose guard nut type available to prevent hose kinking.
- To mount on hose, simply slide it over the nipple and tighten the nut.
- The design to tighten outside of hose reduces hose slip away or fluid leaks.
- Also available are ROTARY NUT CUPLA equipped with ball bearing swivel mechanism to prevent and relieve tension on operator's hands.

Specifications (NUT CUPLA / NUT CUPLA 200 / ROTARY NUT CUPLA)

Body material	Steel (Chrome plated), Stainless Steel (SUS304)			
Urethane hose size	For ø5 mm×ø8 mm, ø6 mm×ø9 mm hose For ø6.5 mm×ø10 mm, ø8 mm×ø12 mm hose For ø8.5 mm×ø12.5 mm, ø11 mm×ø16 mm hose			
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	1.5	15	15	218
Seal material	Seal material	Mark	Working temperature range	Remarks
Working temperature range *1	Nitrile rubber	NBR	-20°C to +60°C	Standard material

*1: The operable temperature range depends on the operating conditions.

Specifications (HI CUPLA for Connection to Braided Hoses)

Body material		Steel (Chrome plated)		Brass	
Braided hose size		For ø9 mm×ø15 mm hose			
Working pressure	MPa	1.5		1.0	
	kgf/cm ²	15		10	
	bar	15		10	
	PSI	218		145	
Seal material		Seal material	Mark	Working temperature range	Remarks
Working temperature range *1		Nitrile rubber	NBR	-20°C to +80°C	Standard material

- Maximum working pressure and temperature range of PN/SN type for braided hoses depends upon the specification of the braided hose to be used.

*1: The operable temperature range depends on the operating conditions.

Tightening Torque Range

Nm {kgf·cm}

Model	SN, PN, SNR Type	65SNG, PNG, SNRG Type	85SNG, PNG, SNRG Type
Torque	9 to 11 {92 to 112}	5 to 6 {51 to 61}	7 to 8 {71 to 82}

To mount on braided hose or urethane hose, slide it over to the hose barb and tighten the nut until it is flush against the hose barb base. It is recommended that grease is applied to the inside of the nut (threaded part and hose contact part) for easy tightening.

Flow Direction

Fluid must run from socket to plug.

Interchangeability

Interchangeable with HI CUPLA models 10, 17, 20, 30, 40, and 60.

Interchangeable with each models of NUT CUPLA series and HI CUPLA series (except models 400, 600, and 800). Please see [page 21](#) for "HI CUPLA Series Interchangeability".

For Low Pressure (Air)

LOCK CUPLA 200

Air line coupling with separation prevention mechanism

Working pressure

Valve structure

Applicable fluid

Push-to-connect operation. Added easy lock design for safety!

- Separation prevention mechanism prevents accidental disconnection after connection. Good for connections between hoses.
- Simple one push of plug and socket to each other for connection. Easy handling improves job efficiency.
- Ball bearing swivel mechanism prevents hose twists and relieves load on holding hands (SNRG type).
- To mount on hose, simply slide it over the nipple and tighten the nut (SNRG type).
- Hose guard nut to prevent hose from kinking as a standard feature (SNRG type).
- Low pressure loss valve design gives improved flow rate.

Suitability for Vacuum

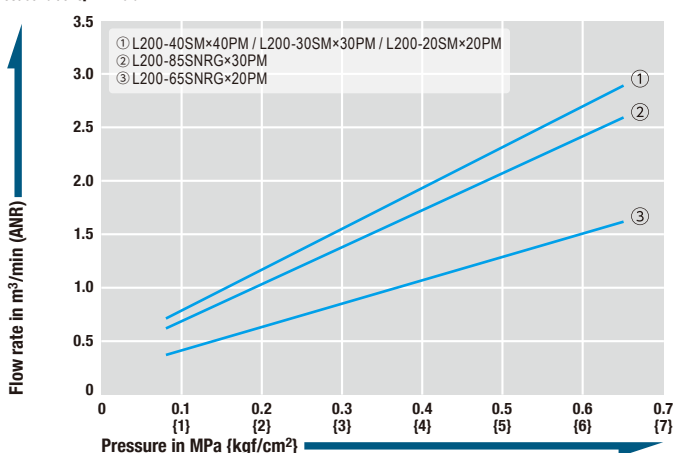

Not suitable for vacuum application in either connected or disconnected condition.

For Low Pressure (Air)

HI CUPLA Two Way Type

For bi-directional compressed air flow

Working pressure
1.5
1.5 MPa
{15 kgf/cm²}

Valve structure
One-way shut-off

Applicable fluid
Air

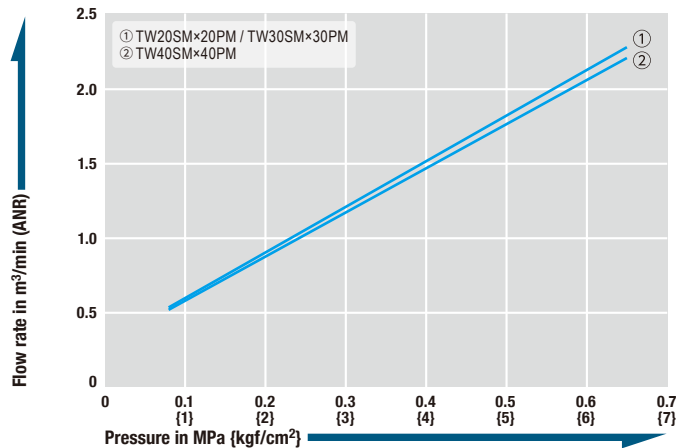

Air flows in either direction from plug or from socket side when coupled.
Ideal for connection of factory air supply lines to pneumatic devices.

- Can be connected with plugs for HI CUPLA Models 10, 17, 20, 30 and 40 and allows fluid to flow from either plug or socket side when coupled.
- Wide range of connections such as from ports on air pipes in factory to individual pneumatic devices.
- Critical structural parts are heat-treated for increased strength giving greater durability and resistance to wear.
- Available in various sizes and end configurations to suit a wide range of applications.

Pressure - Flow Characteristics

[Test conditions] -Fluid : Air

Specifications		Body material of brass or stainless steel is available as made-to-order item.			
Body material		Steel (Chrome plated)			
Size	Thread	1/4", 3/8", 1/2"			
	Hose barb	For ø6.5 mm×ø10 mm, ø8.5 mm×ø12.5 mm hose

For Low Pressure (Air)

FULL BLOW CUPLA

Air line coupling with low pressure loss, high flow rate, and built-in purge function

Working pressure

1.5 MPa
(15 kgf/cm²)

Valve structure

One-way shut-off

Applicable fluid

Air

Unique full-open gate type valve mechanism realizes low pressure loss and high flow rate, which reduces required source air volume.

- The flow rate is increased by up to 40% more than that of HI CUPLA.
- During connection and disconnection, the valve is closed, enabling connection/disconnection under zero line pressure.
- When the sleeve of socket is returned to its original position, the purge mechanism releases the residual air pressure in the plug, eliminating unpleasant popping noise and hose whip motion on disconnection.
- Separation prevention mechanism prevents accidental disconnection of CUPLA, ensuring safe operation.
- The valve can be opened and closed while the socket and plug are connected.
- The weight is reduced by 30 to 45% compared with that of conventional CUPLA.
- Plug and socket with hose guard nut are also available (see [page 68](#) of NK CUPLA HOSE for details).

Note: Direct mounting of FULL BLOW CUPLA to percussive and vibrating tools should be avoided.

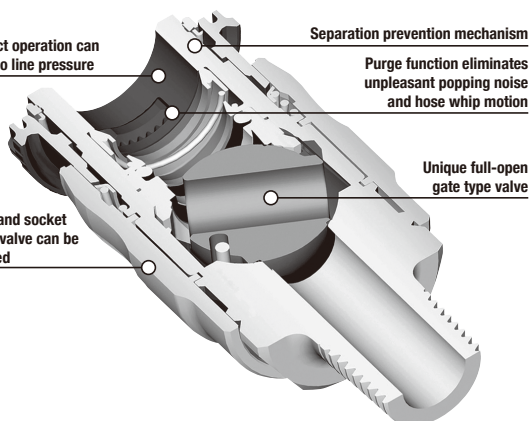

Push-to-connect operation can be made with no line pressure

Separation prevention mechanism

Purge function eliminates unpleasant popping noise and hose whip motion

Unique full-open gate type valve

While the plug and socket are connected, valve can be opened or closed

Specifications

Body material		Aluminum alloy			
Size	Thread and hose barb	1/4", 3/8", 1/2"			
	SN type for urethane hose	For ø6.5 mm×ø10 mm, ø8 mm×ø12 mm polyurethane hose For ø8.5 mm×ø12.5 mm, ø11 mm×ø16 mm polyurethane hose			
Pressure unit		MPa	kgf/cm ²	bar	PSI
Working pressure		1.5	15	15	218
Seal material		Seal material	Mark	Working temperature range	Remarks

Features of FULL BLOW CUPLA

Up to about 40% increase in flow rate.

Pressure loss is reduced to the ultimate level.
Up to about 40% increase in flow rate compared with conventional CUPLA.

The fluid passage is opened in full.

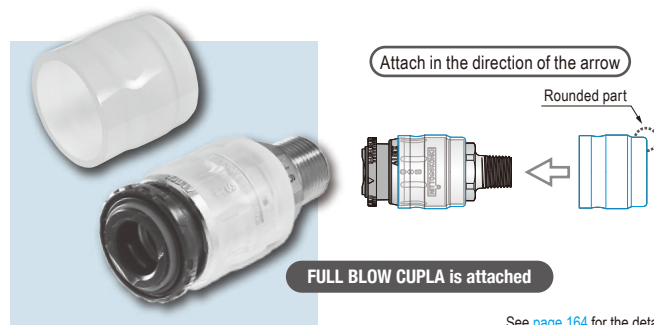

Accessory

Soft plastic cover for FULL BLOW CUPLA

SLEEVE COVER

- Easier sliding operation is achieved by attaching an additional plastic cover over the socket sleeve of FULL BLOW CUPLA.
- Plastic covers reduce the risk of damage if CUPLA strikes other components or products.

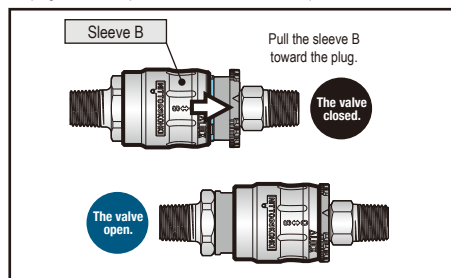

See page 164 for the details.

How It Works

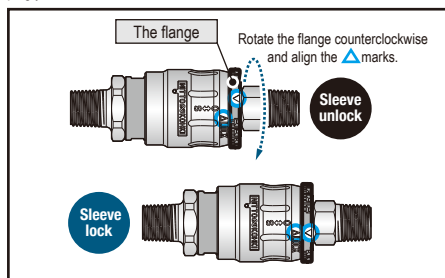

1. Open the valve

Only after connection with the plug, you can slide the socket sleeve B toward the plug in order to open the built-in valve. Full flow path is then obtained.

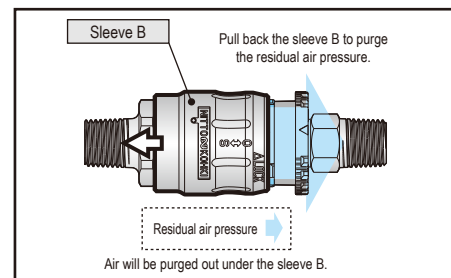

2. Lock the sleeve

Rotate the flange counterclockwise to lock the sleeve B. Without unlocking the plug you cannot disconnect.

3. Purge the residual air

To disconnect the plug, first turn the flange back to its original position for unlocking and then pull the sleeve B back to the original position. The built-in valve will be closed to purge the residual air pressure.

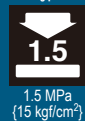

For Low Pressure (Air)

PURGE HI CUPLA

PVR Type

Air line coupling with built-in residual air pressure release function

Working pressure

Valve structure

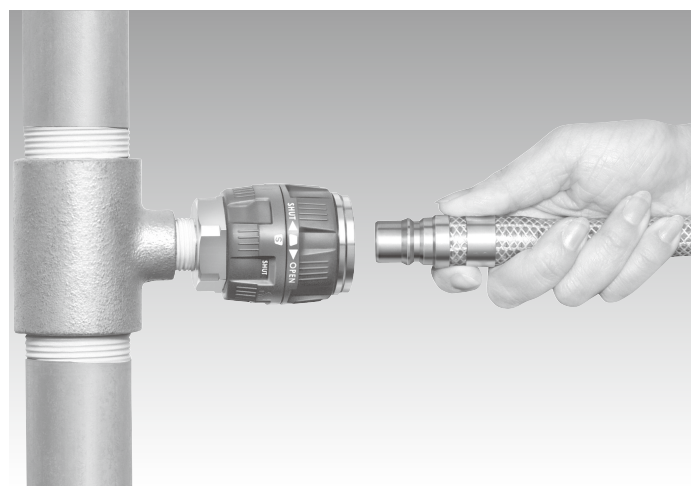

Applicable fluid

Connection can be made smoothly regardless of the existing pressure inside the socket.

- Push-to-connect operation. Easy one-hand operation.
- Built-in separation prevention mechanism prevents accidental disconnection of CUPLA, ensuring safe operation.
- Upon completion of sleeve locking the valve will open to supply air.
- When the sleeve is turned back to its original position, the valve is closed and purges residual air pressure in the plug without unpleasant popping noise and hose whip motion on disconnection.
- Even after connection, valve opening/closing control is possible.
- Flow rate increases by approximately 20% over that of HI CUPLA Model 400SM.
- Can be connected with plugs for HI CUPLA Models 400, 600 and 800.

Function of PURGE HI CUPLA PVR Type

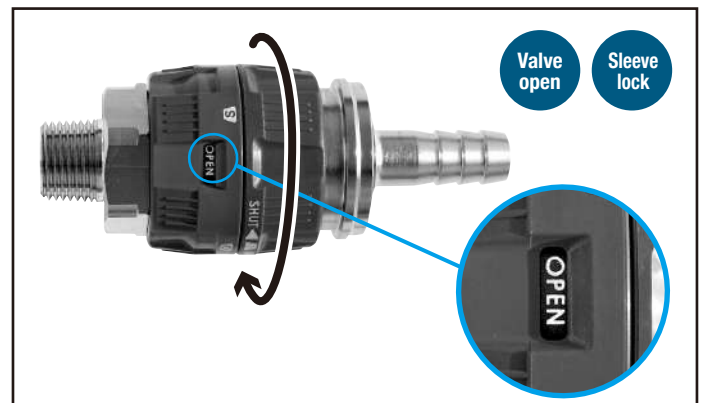

1. Connection

Valve opening/closing operation and plug connection to socket can be made independently. Push-to- connect operation is achieved regardless of existing pressure inside the pipe.

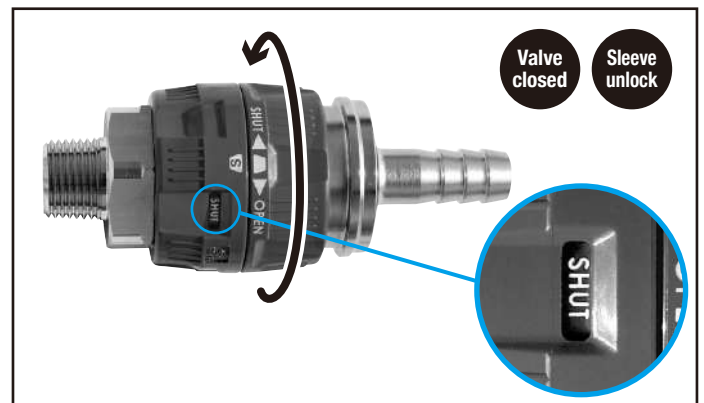

2. Open the valve and lock the sleeve.

Turning the operation ring will open the valve in the socket to supply air and lock the sleeve to prevent accidental disconnection.

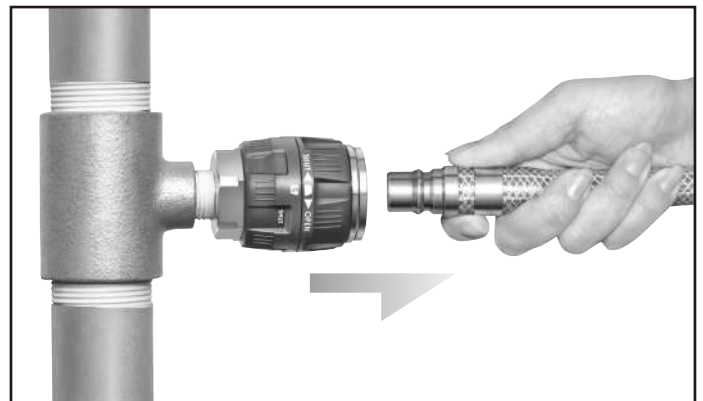

3. Close the valve and unlock the sleeve

Turning the operation ring back to its original position will close the valve and stop air flow, release the residual air pressure in the plug, and unlock the sleeve.

4. Disconnection

Disconnection can be made without unpleasant popping noise and hose whip motion due to no residual air pressure inside the plug.

For Low Pressure (Air)

PURGE HI CUPLA

Air line coupling with residual pressure release function

Working pressure

Valve structure

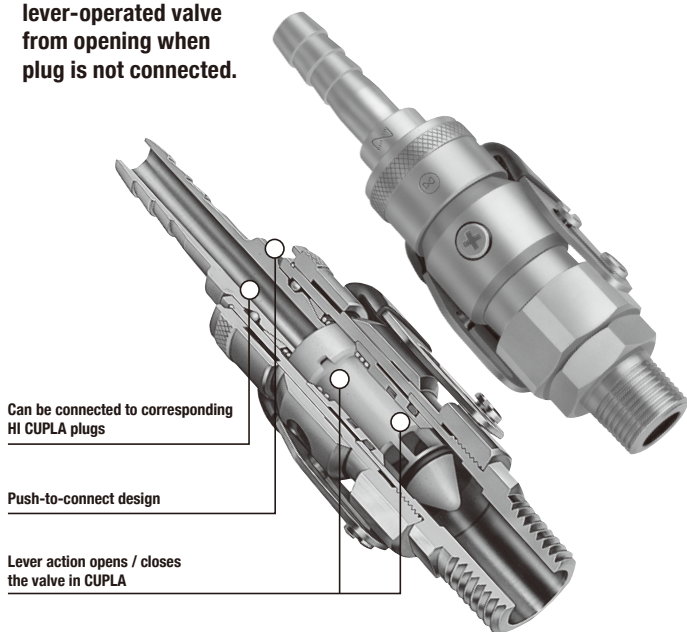

Applicable fluid

Push-to-connect operation even with existing internal pressure! Eliminates unpleasant popping noise and hose whip motion on disconnection.

- Just push in the plug for connection regardless of internal pressure in socket.
- Even after connection, lever operation gives perfect control over valve opening/closing.
- In disconnection, lever action releases residual air pressure in the plug without unpleasant popping noise and hose whip motion.
- Safe design prevents lever-operated valve from opening when plug is not connected.

How to Operate

	<p>1 Just push the plug into socket. (In this stage the valve of the socket is not open.)</p>
	<p>2 Turning down the lever opens the valve and allows the fluid flow. (The turned-down lever works as a sleeve stopper and prevents disconnection.)</p>
	<p>3 When the lever is pulled up, residual air pressure in the plug is purged without unpleasant popping noise and hose whip motion on disconnection. In this stage, the socket valve is still closed.</p>

Specifications

For Low Pressure (Air)

PURGE LINE CUPLA

Simple air line coupling manifold with residual pressure release function

Working pressure

Valve structure

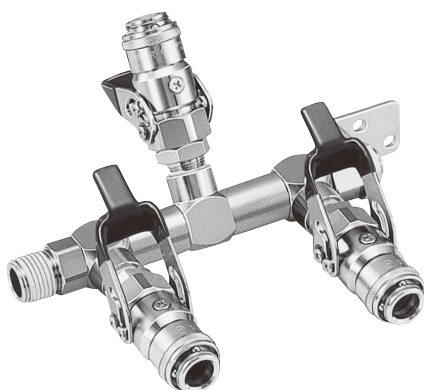

Applicable fluid

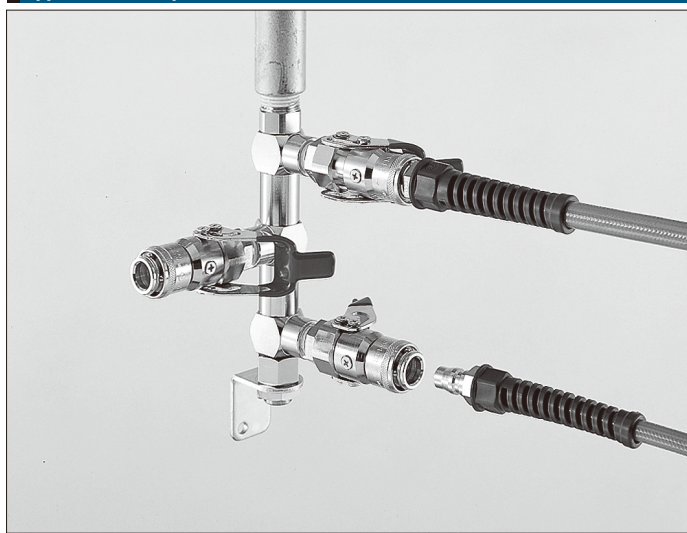

Residual pressure can be released by a mere lever turn. Very smooth connection/disconnection!

- Single action, just push in the plug to connect regardless of internal pressure in socket.
 - No unpleasant noise of air pressure discharge and no hose whip motion on disconnection for safety operation.
 - Safe design – socket valve will not open or close unless plug is connected.
 - Even after connection, a lever turn will open/close valve with perfect control of air flow or line shut-off.
 - Enables simultaneous air supply to three outlets from a single air line.
- (A single outlet PURGE HI CUPLA is also available - see the pages of PURGE HI CUPLA for details.)

Application Example

For Low Pressure (Air)

LINE CUPLA

200T Type, 200L Type, 200S Type

Simple design air line coupling on manifold

Working pressure

Valve structure

Applicable fluid

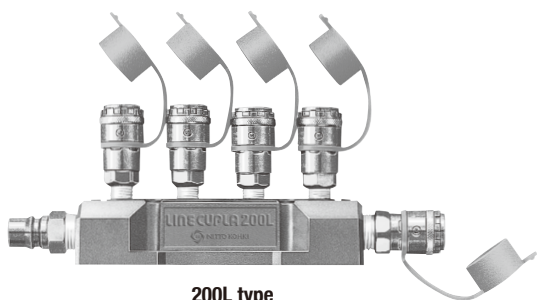

Enables several air lines to be taken simultaneously from one supply line!

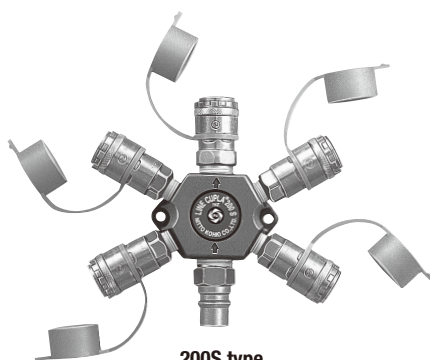

- Just push in the plug into socket for simple and secure connection.
- Multiple outlets are available from single air supply source.
- Choose from the 2-outlet type (Model 200T), the 5-outlet straight type (Model 200L) and the 5-outlet star type (Model 200S) to suit your application.

200T type
(comes with dust caps)

200L type
(comes with an accessory 400SH and dust caps)

200S type
(comes with an accessory 400SH and dust caps)

Specifications

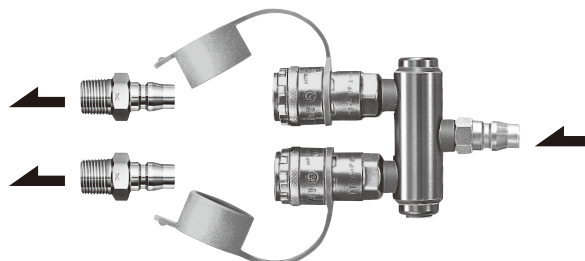

Body material	Body : Aluminum alloy, CUPLA : Steel (Chrome plated)			
Size	Inlet	200T Type : 20PM 200L Type / 200S Type : 400PM		
	Outlet	200T Type : 200-20SM 200L Type / 200S Type : 200-20SM, 200-40SM		
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	1.5	15	15	218
Seal material	Seal material	Mark	Working temperature range	Remarks
Working temperature range *1	Nitrile rubber	NBR	-20°C to +60°C	Standard material

- The products come with dustproof caps.

*1: The operable temperature range depends on the operating conditions.

Flow Direction

Fluid must run from the inlet port to the outlet ports.

Interchangeability

Interchangeable with plugs of HI CUPLA models 10, 17, 20, 30 and 40.

Interchangeable with each models of NUT CUPLA series and HI CUPLA series.

Please see [page 21](#) for "HI CUPLA Series Interchangeability".

Minimum Cross-Sectional Area

(mm²)

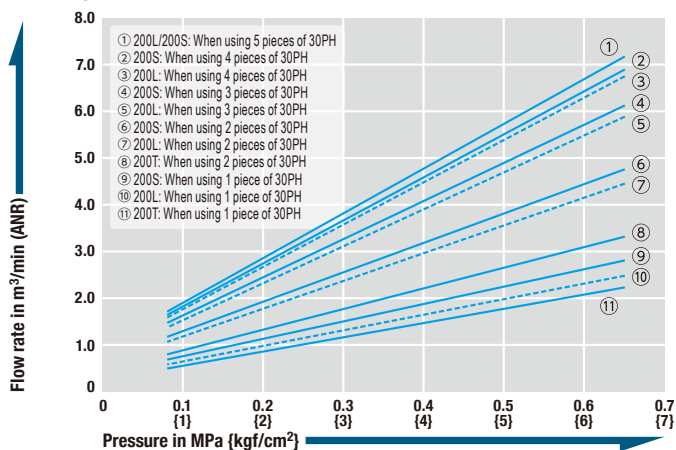

Model	200T type, 200L type, 200S type
Minimum cross-sectional area	19

Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

Pressure - Flow Characteristics

[Test conditions] - Fluid : Air

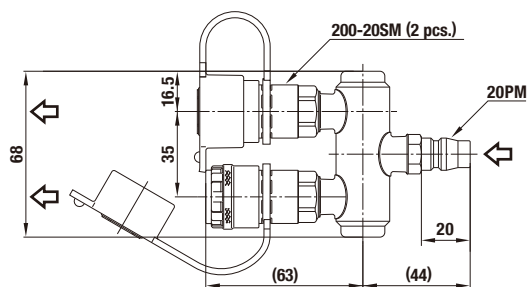

Models and Dimensions

Socket 200T type (For two outlets)

Mass : 272 g

- Fluid must run in the direction of the arrow.
- The product comes with dust caps.

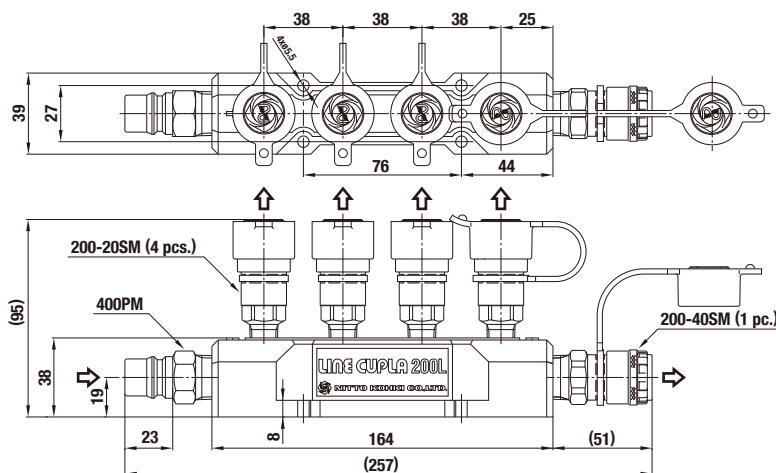

Dimensions (mm)

Socket 200L type (For five outlets, in-line type)

Mass : 890 g

- Fluid must run in the direction of the arrow.
- The product comes with dust caps.
- Accessory : 400SH

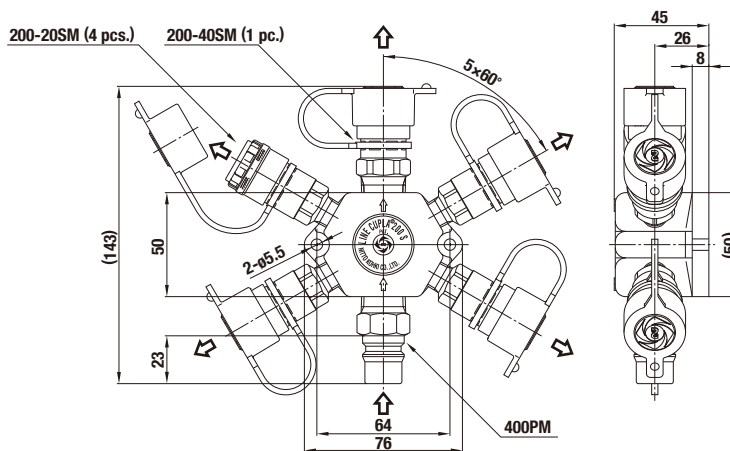

Dimensions (mm)

Socket 200S type (For five outlets, star type)

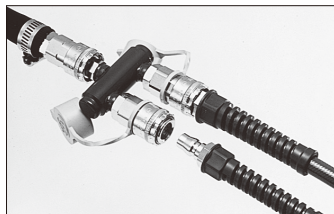

Mass : 769 g

- Fluid must run in the direction of the arrow.
- The product comes with dust caps.
- Accessory : 400SH

Dimensions (mm)

Application Example

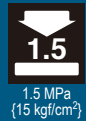

For Low Pressure (Air)

ROTARY FULL BLOW LINE CUPLA

Free rotating branch air line coupling with low pressure loss & high flow rate

Working pressure

Valve structure

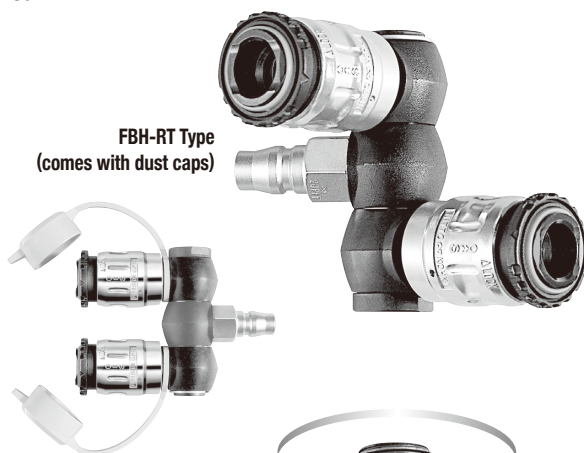

Applicable fluid

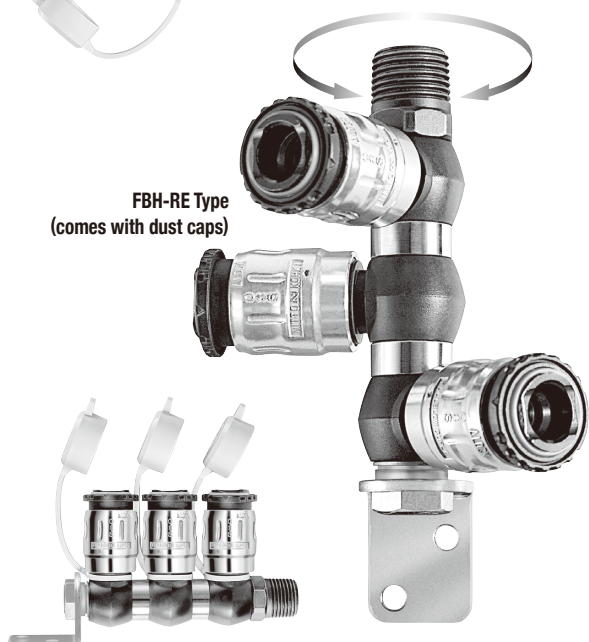

Each air outlet can be turned freely to any angle independently.

- Multiple outlets are available from single air supply source.
- Sideway air outlets are rotatable to any angle.
- Choose either RT type (2 outlets) or RE type (3 outlets) to suit your application.
- The flow rate increases by 40% to 50% over that of ROTARY LINE CUPLA RT type/RE type.
- During connection and disconnection, the valve is closed, enabling connection/disconnection under zero line pressure.
- When the sleeve of socket is returned to its original position, the purge mechanism releases the residual air pressure in the plug, eliminating unpleasant popping noise and hose whip motion on disconnection.
- Built-in separation prevention mechanism prevents accidental disconnection of CUPLA, ensuring safe operation.
- The valve can be opened and closed while the socket and plug is connected.

FBH-RT Type
(comes with dust caps)

FBH-RE Type
(comes with dust caps)

Specifications

Body material	Zinc alloy			
Size	RT type (For two outlets)		RE type (For three outlets)	
	Inlet	Plug (20PFF)	Inlet	R 1/2
	Outlet	FULL BLOW CUPLA	Outlet	FULL BLOW CUPLA
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	1.5	15	15	218
Seal material	Seal material	Mark	Working temperature range	Remarks
Working temperature range *1	Nitrile rubber	NBR	-20 °C to +60 °C	Standard material

- The products come with dustproof caps.

*1: The operable temperature range depends on the operating conditions.

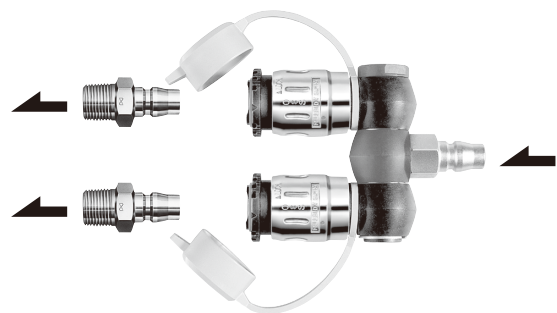

Maximum Tightening Torque (FBH-RE Type)

Nm {kgf·cm}

Size (Thread)	1/2"
Torque	30 {306}

Flow Direction

Fluid must run from the inlet port to the outlet ports.

Interchangeability

Interchangeable with plugs of HI CUPLA models 10, 17, 20, 30 and 40.
Interchangeable with each models of NUT CUPLA series and HI CUPLA series.
Not interchangeable with some plugs of plastic HI CUPLA 250 (discontinued product).
Please see [page 21](#) for "HI CUPLA Series Interchangeability".

Minimum Cross-Sectional Area

(mm²)

Model	FBH-RT	FBH-RE
Minimum cross-sectional area	44	44

Suitability for Vacuum

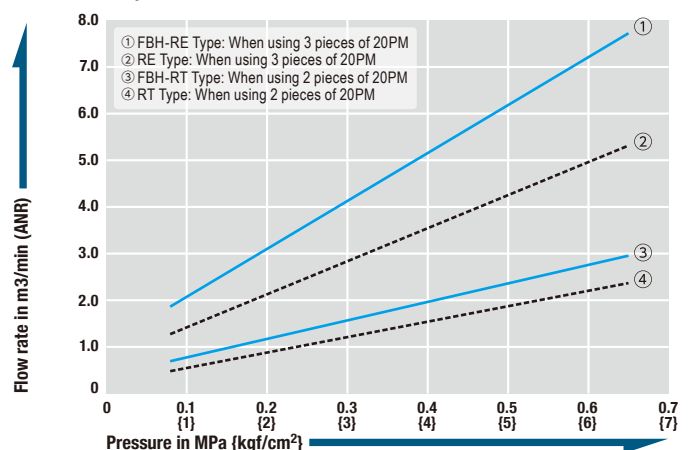

Not suitable for vacuum application in either connected or disconnected condition.

Pressure - Flow Rated Characteristics (Comparison with ROTARY LINE CUPLA)

[Test conditions]

- Fluid : Air
- Plug : 20PM

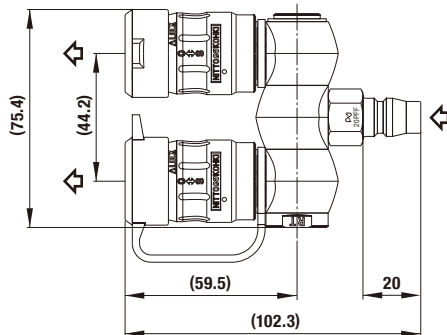

— ROTARY FULL BLOW LINE CUPLA ROTARY LINE CUPLA

Models and Dimensions

Socket FBH-RT type (For two branch lines)

- Inlet : 1/4" HI CUPLA (20PFF)
- Outlet : FULL BLOW CUPLA (2 pcs.)
- Mass : 358 g
- Fluid must run in the direction of the arrow.

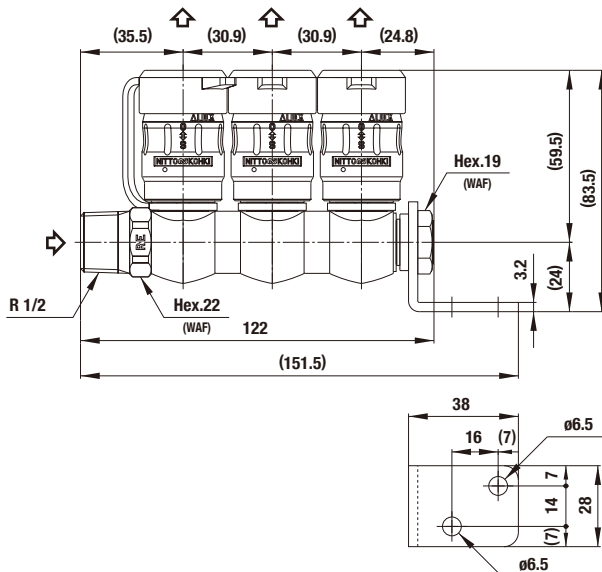

• The product comes with dust caps.

Dimensions (mm)

Socket FBH-RE type (For three branch lines)

- Inlet : R 1/2
- Outlet : FULL BLOW CUPLA (3 pcs.)
- Mass : 527 g
- Fluid must run in the direction of the arrow.

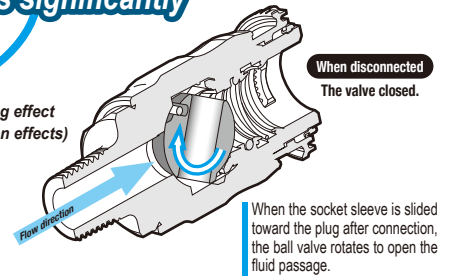

- The product comes with dust caps.

Dimensions (mm)

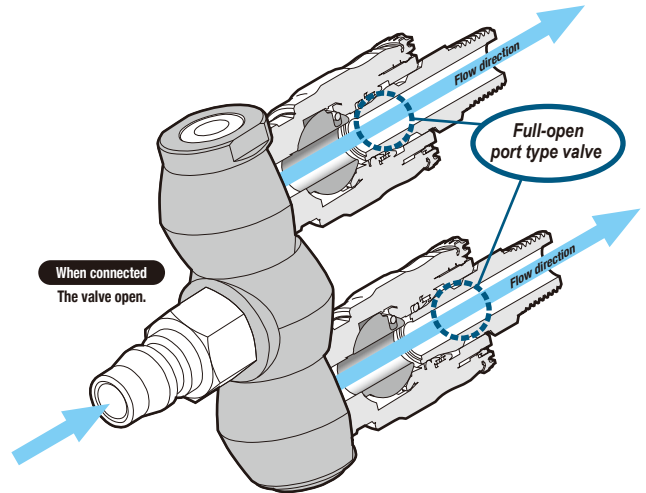

Features of ROTARY FULL BLOW LINE CUPLA

Flow rate is significantly increased.

Significant energy saving effect
(Source pressure reduction effects)

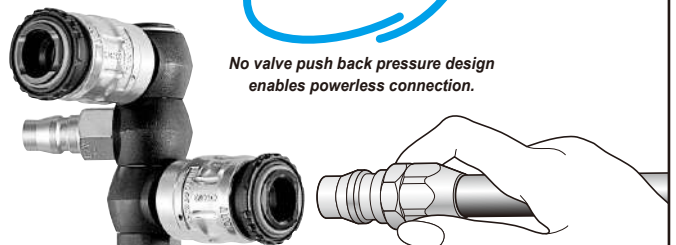

When the socket sleeve is slid toward the plug after connection, the ball valve rotates to open the fluid passage.

Far easier operation

No valve push back pressure design
enables powerless connection.

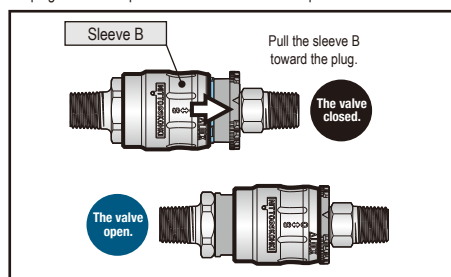

Increased safety operation

Purge function eliminates unpleasant
popping noise and hose whip motion.

How It Works

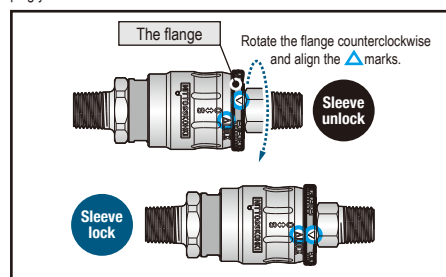

1. Open the valve

Only after connection with the plug, you can slide the socket sleeve B toward the plug in order to open the built-in valve. Full flow path is then obtained.

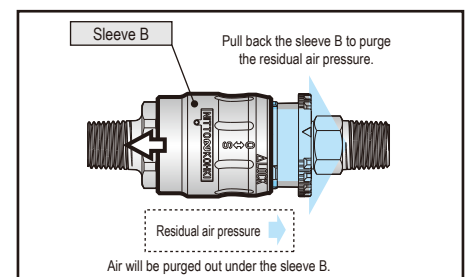

2. Lock the sleeve

Rotate the flange counterclockwise to lock the sleeve B. Without unlocking the plug you cannot disconnect.

3. Purge the residual air

To disconnect the plug, first turn the flange back to its original position for unlocking and then pull the sleeve B back to the original position. The built-in valve will be closed to purge the residual air pressure.

For Low Pressure

HI CUPLA ACE

Lightweight plastic coupling with separation prevention mechanism for air line applications

Working pressure

1.5 MPa
(15 kgf/cm²)

Valve structure

One-way shut-off

Applicable fluids

Air

Water

The weight is merely a quarter of steel HI CUPLA's and smooth push-in connection is achieved. Separation prevention mechanism for safety operation.

- Pressure ratings comparable to steel CUPLA.
- A built-in separation prevention mechanism locks the sleeve upon connection, thus prevents accidental disconnection.
- Just push plug into socket for simple connection.
- The weight is a quarter of steel HI CUPLA for easy handling.
- Can be used for air and water.
- Air flows in either direction from plug or from socket side when coupled.
- Plug and socket with hose guard nut are also available (see [page 68](#) of NK CUPLA HOSE/NK CUPLA COIL HOSE for details).

Specifications

For Low Pressure (Air)

ROTARY PLUG

For pneumatic tools and devices

Working pressure

Valve structure

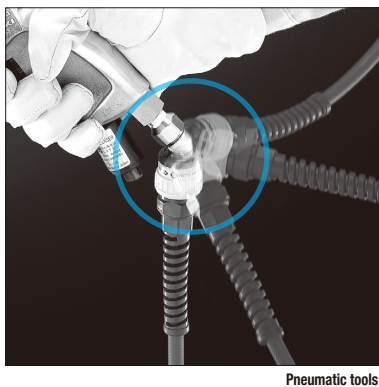

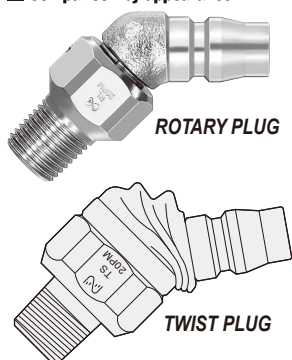

Applicable fluid

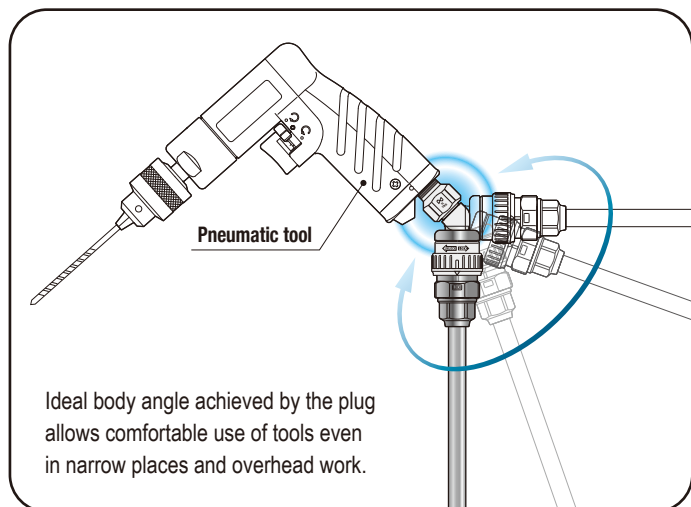

Rotary function allows 360° swivelling!
Big improvement for handling of pneumatic tools!

- Rotary neck plug for hose connection to pneumatic tools and pneumatic devices.
- Fits at 45° angle to the tool eliminating annoying offset load caused by connected hose.
- Ideal compact design enables optimum workability by simple body structure. Now far lighter and smaller than conventional models.
- New dust-proof design for increased durability.
- For air tackers, nailers, impact wrenches and other pneumatic tools.

Comparison by appearance

Pneumatic tools

Ideal body angle achieved by the plug allows comfortable use of tools even in narrow places and overhead work.

Specifications

Body material	Steel (Nickel plated)			
Size (Thread)	1/4", 3/8"			
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	1.5	15	15	218
Seal material	Seal material	Mark	Working temperature range	Remarks
Working temperature range *1	Nitrile rubber	NBR	-20°C to +80°C	Standard material

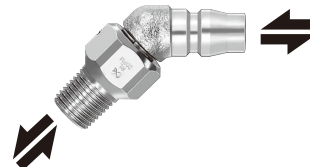

*1: The operable temperature range depends on the operating conditions.

Maximum Tightening Torque

	Nm {kgf·cm}
Size (Thread)	1/4" 3/8"
Torque	14 {143} 22 {224}

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Interchangeability

Interchangeable with sockets of HI CUPLA models 10, 17, 20, 30, 40 and 60.
 Interchangeable with each models of NUT CUPLA series and HI CUPLA series (except models 400, 600, and 800).
 Please see page 21 for "HI CUPLA Series Interchangeability".

Minimum Cross-Sectional Area

	(mm ²)
Model	RL-20PM RL-30PM RL-20PFF
Minimum cross-sectional area	28 28 28

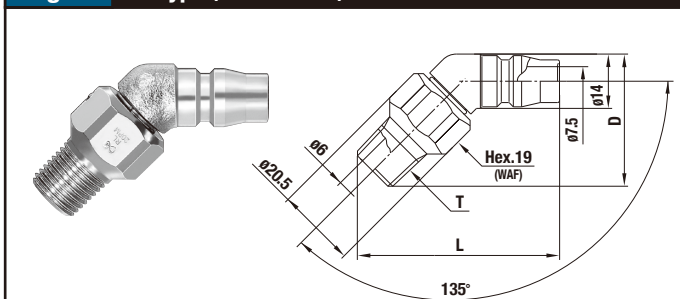

Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

Models and Dimensions

Dimensions (mm)

For Low Pressure (Air)

TWIST PLUG

For pneumatic tools and devices

Working pressure
1.0
1.0 MPa
{10 kgf/cm²}

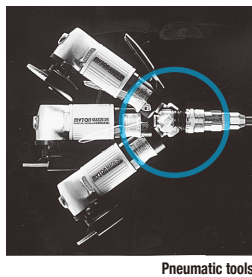

Valve structure

One-way shut-off

Applicable fluid

Air

Eliminates hose twisting, kinking, or bending! Greatly improves working efficiency!

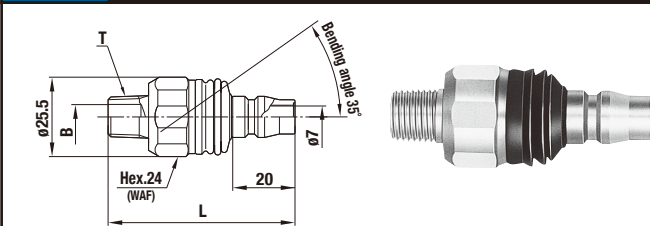

- A plug with a free twisting neck for hose connections to pneumatic tools and devices.
- Free angle control (max.70° flexible) provides comfortable job positions, even in narrow spaces or with overhead works.
- The flexible part is reinforced with self-lubricating plastics to give smooth bending action and excellent durability.
- Dust protector over the flexible part prevents dirt and swarf from entering.

Models and Dimensions

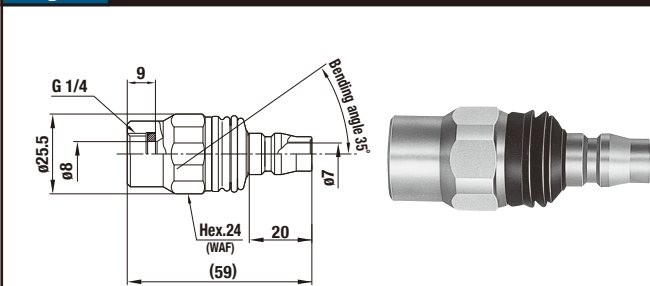

WAF : WAF stands for width across flats.

Plug PM type (Male thread)

Min. cross-sectional area	12.5	38.5	38.5	38.5

Pressure - Flow Characteristics

[Test conditions] - Fluid : Air

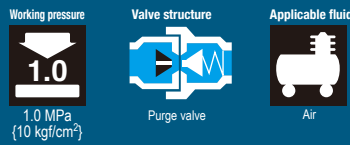

(S) is a state of straight.
(B) is a state of bending.

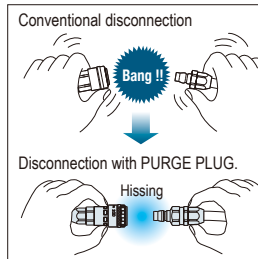

For Low Pressure (Air)

PURGE PLUG

For air lines with purge mechanism

Eliminates unpleasant popping noise and hose whip motion when CUPLA is disconnected.

- When CUPLA is disconnected, the pressure left in the plug side hose is released gradually without unpleasant popping noise and hose whip motion.
- Unique design of air purge system enables the residual pressure release quickly and quietly.
- A unique but simple purge valve design is good for long and repeated use.
- The function is assured even under a high supply pressure or with a long hose.

Note: This product is not a check valve to totally stop the air flow.

Specifications

Body material	Steel (Chrome plated)			
Size	1/4", 3/8", 1/2" / $\phi 6.5 \text{ mm} \times \phi 10 \text{ mm}$, $\phi 8.5 \text{ mm} \times \phi 12.5 \text{ mm}$ hose

For Low Pressure (Air)

ANTI-VIBRATION PLUG HOSE

Plug hose for vibrating and percussive air tools

Protects CUPLA from shock generated by vibrating tools and impact tools.

- Optimizes life and prevents wear of “CUPLA” by absorbing strong shocks generated by connected vibrating tools.
- Prevents hard-to-notice flow reduction caused by “CUPLA” wear under continuous vibration.
- Flexible rubber hose allows free and wide range of tool motion.

Specifications				
Applicable fluid	Air			
Model	SHA-3-2R		SHA-3-3R

Torque	14 {143}	22 {224}	

Interchangeability

Interchangeable with sockets of HI CUPLA models 10, 17, 20, 30, 40 and 60.
Interchangeable with each models of NUT CUPLA series and HI CUPLA series (except models 400, 600, and 800).
Please see [page 21](#) for “HI CUPLA Series Interchangeability”.

Application

Suitable for air tools such as impact wrenches used in car maintenance or metalworking industries, and tackers, nailers or concrete breakers in the construction industry, that commonly cause incessant vibrations.

As an intermediate connection hose between “CUPLA” and a vibrating air tool.

For Low Pressure (Air)

DUSTER CUPLA

Air line coupling with air blower function

Working pressure

Valve structure

Applicable fluid

Three functions in one: connection, air blow, hose twist release! Dust blow without detaching the tool!

- HI CUPLA comes with compact air blow function.
- Improves job efficiency by air blow with tool still connected to hose.
- Ball bearing swivel mechanism prevents hose twist and relieves tension on operator's hand.
- Special design of air blow button switch is free from in line air pressure - no hard press down required.
- Also simple is routine water drain from air line before starting daily work.

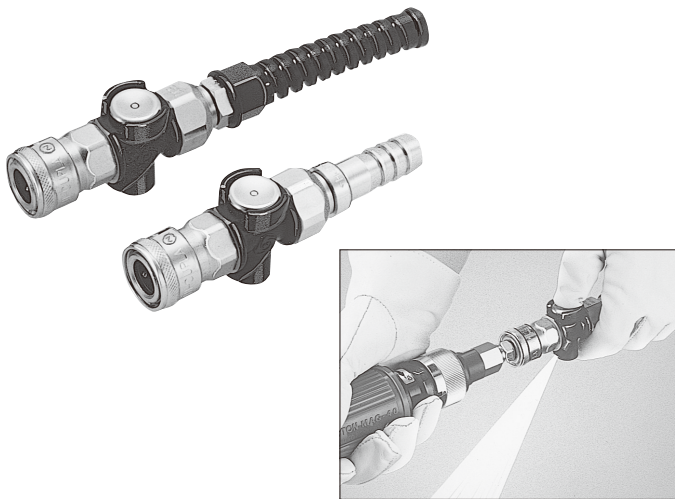

Photo shows simulated air flow.

For Low Pressure (Air)

NK CUPLA HOSE with HI CUPLA ACE / FULL BLOW CUPLA NK CUPLA COIL HOSE with HI CUPLA ACE / FULL BLOW CUPLA

Couplings with polyurethane hose for air lines

Working pressure

Valve structure

Applicable fluid

One-way shut-off

Air

HI CUPLA ACE and FULL BLOW CUPLA sockets with polyurethane hoses are now standard stock items. Push-to-connect design for quick piping.

- Sockets of HI CUPLA ACE and FULL BLOW CUPLA comes with a spring nut that prevents hose bending and urethane hose with excellent flexibility, durability and wear resistance.
- Built-in separation prevention mechanism locks the sleeve upon connection, thus prevents accidental disconnection.
- Just push the plug into the socket for simple connection.
- Spiral polyurethane coil hoses processed from straight tube have self-recoiling feature.
- A Sleeve Cover is attached to "NK CUPLA HOSE/NK CUPLA COIL HOSE with FULL BLOW CUPLA", which reduces the impact on CUPLA and improves operability.

Seal material		Seal material	Mark	Working temperature range	Remarks
Working temperature range ^{*1}		Nitrile rubber	NBR	-5℃ to +60℃	Standard material

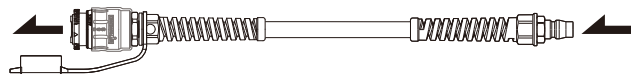

*1: The operable temperature range depends on the operating conditions.

Flow Direction

- With HI CUPLA ACE: Fluid flow can be bi-directional when socket and plug are connected.

- With FULL BLOW CUPLA: Fluid must run from socket side to plug side of the hose.

Interchangeability

Interchangeable with HI CUPLA models 10, 17, 20, 30, 40 and 60.

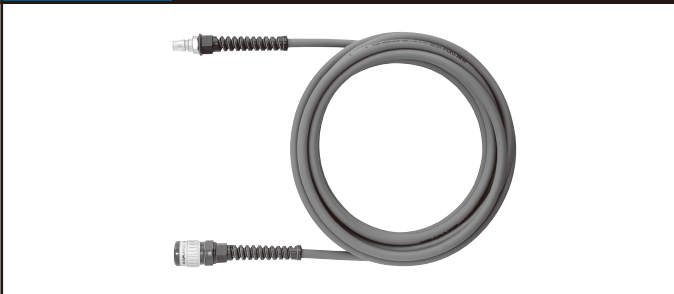

Interchangeable with each models of NUT CUPLA series and HI CUPLA series (except models 400, 600, and 800). Please see [page 21](#) for "HI CUPLA Series Interchangeability".

Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

For Low Pressure

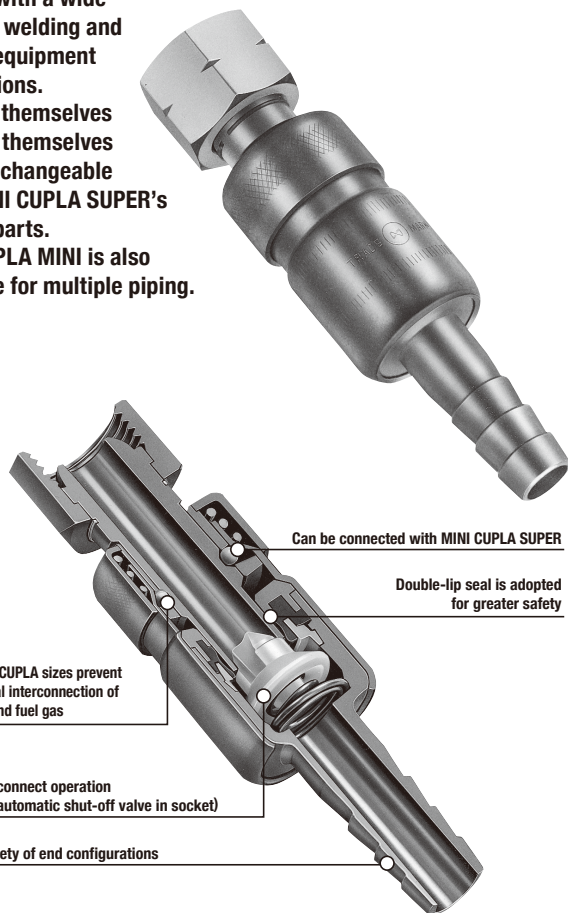

MINI CUPLA

Standard type for use on equipment for welding and gas cutting, etc.

Exclusively for oxyacetylene equipment. Many variations with higher flow rates!

- From cylinders to torches, all piping connections associated with welding and cutting equipment are push-to-connect operations.
- Double-lip seal prevents minor leak during connection. Oxygen and fuel gas CUPLA have different sizes to prevent accidental interconnection.
- Pressure loss is minimized to achieve higher flow rate.
- Various types of end configurations have been standardized to comply with a wide range of welding and cutting equipment applications. Sockets themselves or plugs themselves are interchangeable with MINI CUPLA SUPER's counterparts.
- LINE CUPLA MINI is also available for multiple piping.

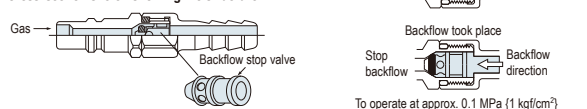

Structure and Principle of Backflow Prevention

Plug with backflow stop valve (22PHB, 25PHB, 22PFB, 33PHB, 35PHB, 33PFB)

Plugs with backflow stop valve in MINI CUPLA are designed exclusively for gas welding/cutting to prevent occurrence of gas mixing. Possible backflow of gas during operation can be stopped by cutting the back flow into the cylinder or line.

Such valve is adopted in both fuel gas and oxygen plug.

Cross-section sketch showing the structure

Specifications

Body material	Brass			
Size	Thread	1/8", 1/4", 3/8" / M16, W12.5-20		
	Hose barb	1/4", 5/16", 3/8"

Socket LINE CUPLA MINI LM-32 (For three port branch piping)

Mass : 4,300 g

- Dust caps come with the product as standard.

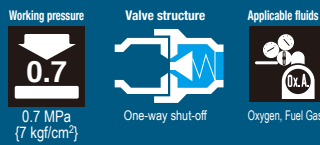

Dimensions (mm)			
LINE CUPLA MINI contains:	For Oxygen	For Fuel Gas	Qty
Supply port	1/4"	3/8"	Each 1 pc.
Gas outlets	22SM	33SM	Each 3 pc.
Accessories (Plug with backflow stop valve)	22PHB	33PHB	Each 3 pc.

For Low Pressure

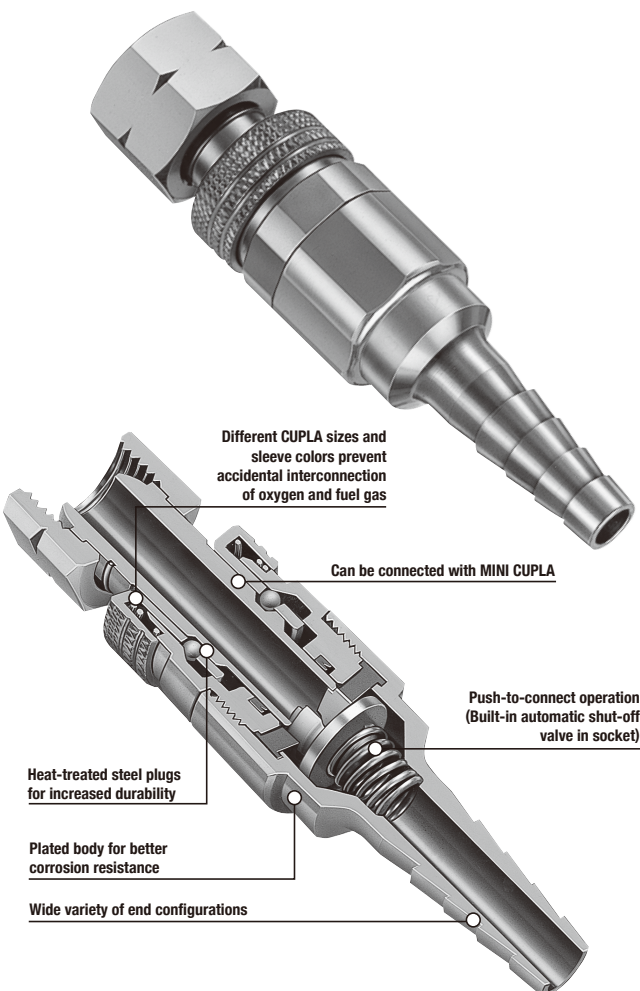

MINI CUPLA SUPER

Heavy-duty push-to-connect type for oxyacetylene piping

Exclusively for welding and cutting equipment.

- From cylinders to torches, all piping connections associated with welding and cutting equipment are push-to-connect operations.
- Plated body for better corrosion resistance.
- Heat-treated plugs for better durability.
- Oxygen and fuel gas CUPLA have different configuration sizes with sleeves in different appearances, silver colored plating for oxygen and copper colored plating for fuel gas, to prevent accidental interconnection.
- Smaller diameter design enables wider range of applications.
- Various types of end configurations have been standardized to comply with a wide range of welding and cutting equipment applications. Sockets themselves or plugs themselves are interchangeable with MINI CUPLA's counterparts.

For Low Pressure

MOLD CUPLA

General purpose and mold coolant port coupling

Working pressure

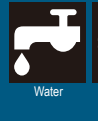

Valve structure

Applicable fluids

Water

Heated oil

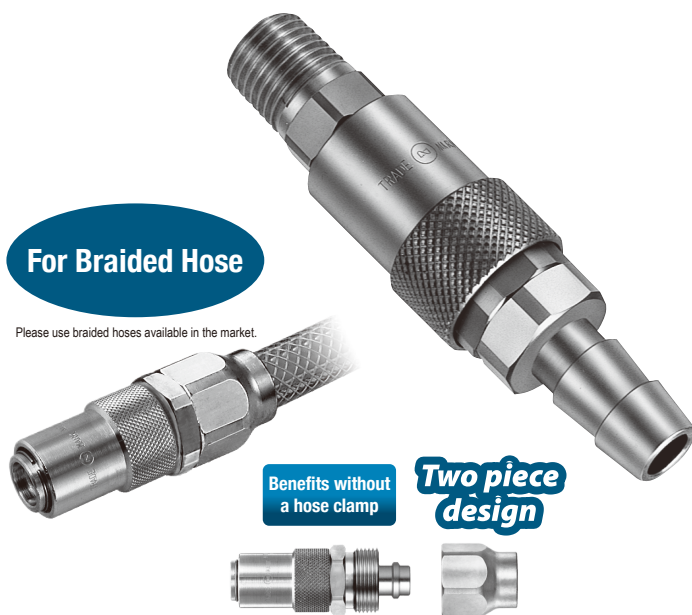

Designed for quick replacement for die and mold !
Rust resistant models having many variations.

- Space saving design for molds with closely spaced coolant ports.
- Long sleeve socket facilitates connection/disconnection with plug embedded in mold.
- Enables quick mold cooling water line connection/disconnection.
- Various sizes and end configurations to suit a wide variety of mold applications.
- Can be connected with SUPER CUPLA, excluding K3 and K4 types.
- Push-to-connect design. (Built-in automatic shut-off valve in the socket) Also available is CUPLA without valve (Please specify in ordering).
- CUPLA for braided hose connection requires no hose clamp. (Model K-90SN)

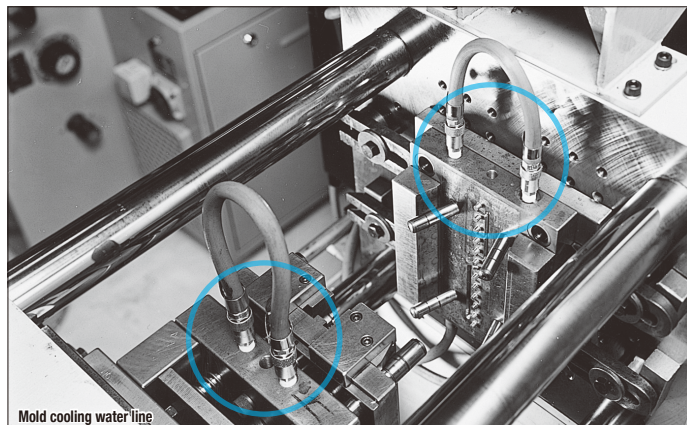

For Braided Hose

Please use braided hoses available in the market.

Benefits without a hose clamp

Two piece design

Mold cooling water line

Specifications

Body material		Brass			
Size	Thread	1/8", 1/4", 3/8"			
	Hose barb	Hose: 1/4", 3/8" / Braided hose: ø9 mm×ø15 mm			
Pressure unit		MPa	kgf/cm ²	bar	PSI
Working pressure		1.0	10	10	145
Seal material		Seal material	Mark	Working temperature range	Remarks
Working temperature range*1		Nitrile rubber	NBR	-20°C to +80°C	Standard material
		Fluoro rubber	FKM	-20°C to +180°C	Available on request

- Maximum working pressure and working temperature range of CUPLA for braided hoses depend upon the specifications of braided hoses to be used.

*1: The operable temperature range depends on the operating conditions.

Maximum Tightening Torque

Nm {kgf·cm}

Size (Thread)	1/8"	1/4"	3/8"
Torque	5 {51}	9 {92}	11 {112}

Tighten the nut until it is flush against the hose barb base after pushing a braided hose to the end.

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Interchangeability

Sockets and plugs can be connected regardless of end configurations and sizes. K-0 series are not interchangeable with high flow type K3 and K4 series. Can be connected with SUPER CUPLA.

* Braided hoses for SN type should be made of soft PVC and woven by reinforcement thread.

For Low Pressure

MOLD CUPLA High Flow Type

High flow type mold coolant port coupling

Flow rate has doubled* to increase productivity.

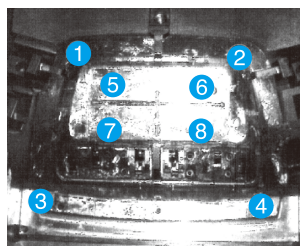

*Compared to our conventional model

- High flow type K3 and K4 series are added to MOLD CUPLA series for mold coolant and heated oil port coupling.
- Almost double flow rate compared with our standard K-01, K-02 and K-03 series, increasing productivity.
- Space saving design for molds with closely spaced coolant ports.
- Long sleeve socket facilitates connection/disconnection with plug embedded in mold.
- Enables quick mold coolant hose connection/disconnection.

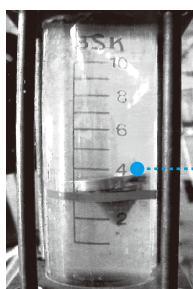

Results of reduced cooling time in the field

A customer replaced conventional K-0 series MOLD CUPLA with the K3 series and shortened the cooling time from 30 seconds to 21 seconds meaning an 18% reduction per shot and increased productivity by 20%, compared to the conventional models. Temperature checks at 8 positions on the mold (①~⑧ on the right picture) showed that surface temperatures on average had fallen by 3°C, providing evidence of the high cooling efficiency.

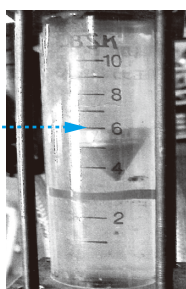

Flow comparison

Coolant water flow rate was checked with a flow meter, which confirmed increase by 1.7 to 1.8 times, compared to the conventional models when MOLD CUPLA K3 series are used.

Conventional K-0 series MOLD CUPLA were used.

Increased by
1.7 to 1.8 times UP

K3 series are used.

Specifications

Body material		Brass			
Size	Thread	1/4", 3/8", 1/2"			
	Hose barb	3/8", 1/2" hose			
Pressure unit		MPa	kgf/cm ²	bar	PSI
Working pressure		1.0	10	10	145
Seal material Working temperature range*1		Seal material	Mark	Working temperature range	Remarks
		Nitrile rubber	NBR	-20°C to +80°C	Standard material
		Fluoro rubber	FKM	-20°C to +180°C	Available on request

*1: The operable temperature range depends on the operating conditions.

Maximum Tightening Torque

Nm {kgf·cm}

Size (Thread)	1/4"	3/8"	1/2"
Torque	9 {92}	11 {112}	20 {204}

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Interchangeability

K3 series sockets and plugs can be connected regardless of end configuration and sizes. K4 series sockets and plugs can be connected regardless of end configuration and sizes. K3 series and K4 series are not interchangeable with each other. Also not interchangeable with other K-0 series.

Minimum Cross-Sectional Area

(mm²)

Accessory

For low pressure
For checking the water flow of mold cooling water pipes

FLOW MONITOR

Replaceable Flow Vane type

The flow of cooling water
can be checked at a glance.

- Fluid flow from low flow rate (2 L/min) water pipes can be visually checked with the rotating two-colored impeller.
- Flow Vane ASSY can be replaced without removing it from the piping.
- The stopper prevents unintended removal of the plastic parts.
- Installation and replacement is easy since the screw part of the T2 side rotates freely to the left and right.

Flow Vane ASSY
(Plastic part)

NEW

Check the flow with the rotating two-colored impeller.

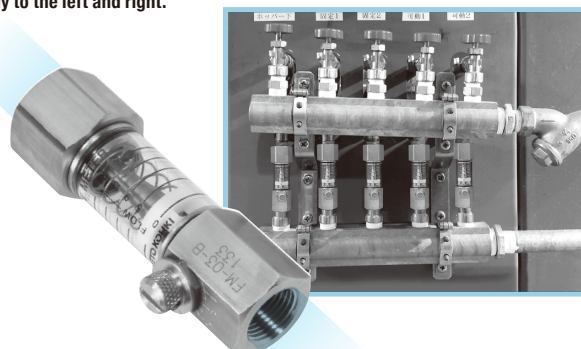

See page 167 for the details.

Flow meter with valve dedicated for mold cooling lines

FLOW METER

The coolant flow rate stability and specified flow rate reproducibility have been achieved.

- Graduated scale shows the coolant flow rate numerically, thus reducing operator variation in setting cooling conditions.
- Although small, it has a built-in flow rate adjustment valve, allowing the molding conditions of each machine to be set freely.
- Molding conditions are reproducible and lead time can be shortened.
- Installation and replacement is easy since the screw part of the T2 side rotates freely to the left and right.

See page 168 for the details.

For Low Pressure

LEVER LOCK CUPLA

Metal Body / Plastic Body

For bulk flow, low pressure applications

Working pressure

0.7 to 1.8
0.7 to 1.8 MPa
(7 to 18 kgf/cm²)

Working pressure

0.2 to 0.5
0.2 to 0.5 MPa
(2 to 5 kgf/cm²)

Valve structure

Designs and specifications are subject to change for improvement without notice

Water

Hydraulic oil

Air

Powder

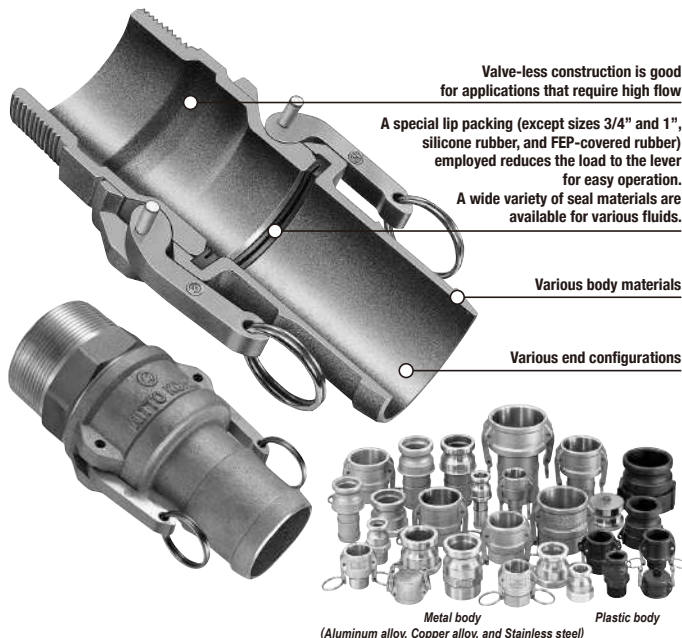

Steam

Applicable fluids (plastic body CUPLA are for water or air only)

Note: Depending on the temperature of steam / hot water, the heat may damage seal materials.

Light lever pull-down will connect the plug and socket without fail ready to flow liquid or gases.

- This CUPLA complies with diversified applications in liquid or gas transportation.
- End-face seal structure enables no bumps or hollows on the internal fluid passage, and ensures smooth fluid transportation.
- A special lip packing (except sizes 3/4" and 1", silicone rubber, and FEP-covered rubber) employed reduces the load to the lever for easy operation.
- Connection part dimensions comply with US military specifications MIL-A-A-59326 (MIL-C-27487).
- The variety of body materials, sizes and end configurations has been standardized to comply with wide range of applications.
- Additional stopper function design will enhance safety (only for made-to-order metal body product).

For Medium Pressure

TSP CUPLA

For medium pressure general applications

Working pressure

1.5 to 7.5
1.5 to 7.5 MPa
(15 to 76 kgf/cm²)

Valve structure

Straight through

Applicable fluids for braided hose connection type depend upon the specifications of braided hoses to be used.

Applicable fluids

Note: Depending on the temperature of steam / hot water, the heat may damage seal materials.

Valveless structure suits high viscosity fluids! Various body materials, sizes and end configurations. Braided hose connection types are newly added.

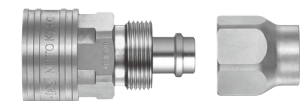

- Valveless construction drastically saves pressure loss and achieves high flow rate.
- Suitable for high viscosity fluids (such as grease).
- Available in various standard body materials, sizes and end configurations to cope with diversified applications and operating situations.
- No hose clamp required! Simple and secure connection to braided hose.

Note: See the pages of Seal Material Selection Table at the end of this catalog for the suitability of seal materials to fluids.

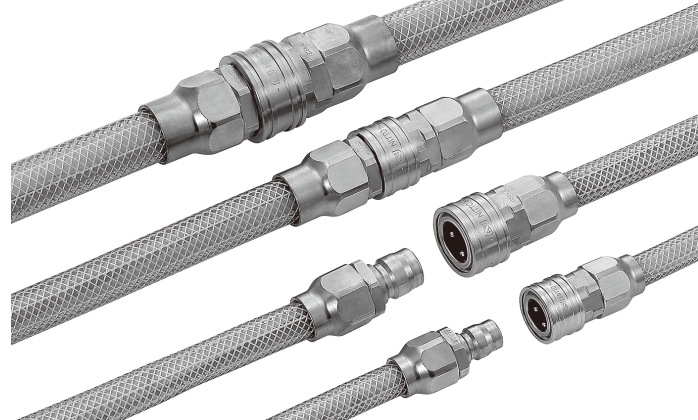

For connection to braided hoses

Benefits without a hose clamp

Two piece design

Please use braided hoses available in the market.

Specifications

Body material		Brass				Stainless steel (SUS304), Steel (Nickel plated)			
Size (Thread and hose)		1/8", 1/4" 3/8", 1/2"	3/4" 1"	1 1/4" 1 1/2"	2"	1/8", 1/4" 3/8", 1/2"	3/4" 1"	1 1/4" 1 1/2"	2"

	PSI	725	435	290	218	1090	653	435	290
Seal material *1 Working temperature range *2		Seal material	Mark		Working temperature range		Remarks		
		Nitrile rubber	NBR		-20°C to +80°C		Standard material		
		Fluoro rubber	FKM		-20°C to +180°C				
		Ethylene-propylene rubber	EPDM		-40°C to +150°C				

- SUS316 is available as option.

- Maximum working pressure and working temperature range of TSP CUPLA for braided hoses depend upon the specifications of braided hoses to be used.

*1: Seal material available for braided hoses is nitrile rubber only.

*1: Seal material available for steel body is nitrile rubber only.

*2: The operable temperature range depends on the operating conditions.

* Tighten the nut for braided hoses until it is flush against the hose barb base.

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Interchangeability

Sockets and plugs can be connected regardless of end configurations if the first number(s) of the model is the same.

*1 : 1TSP steel is a made-to-order item. *2 : Stainless steel: 54×ø60 *3 : Stainless steel: 54×ø59 *4 : Stainless steel: 58×ø65 *5 : Braided hoses for TPN type and TSN type should be made of soft PVC and woven by reinforcement thread.
 - Hydrocarbon type grease is applied to the threaded part of stainless steel nut for TPN type and TSN type to prevent galling.

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

For Low Pressure

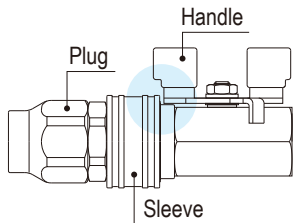

TSP CUPLA Socket with Ball Valve

For low pressure general applications

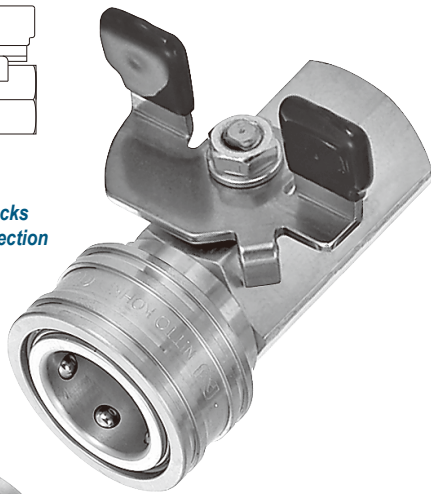

One-piece design of TSP CUPLA socket and ball valve.
Separation prevention mechanism prevents accidental disconnection during connection.
(when the valve is open.)

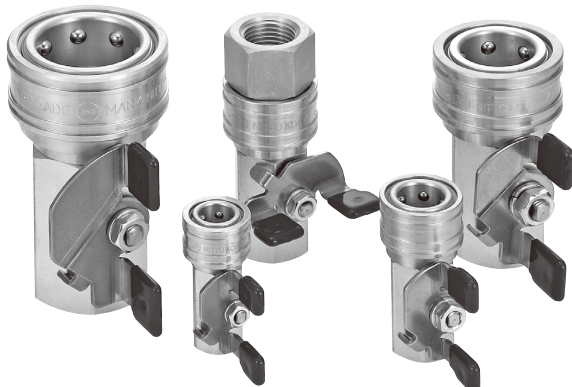

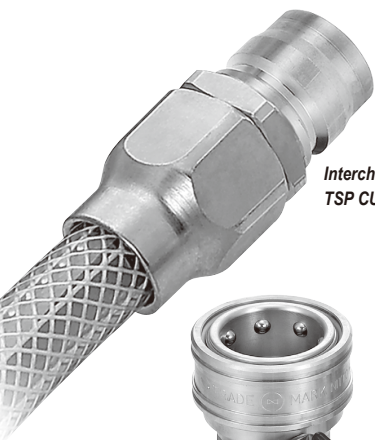

- Socket valve can be opened and shut off while socket and plug are connected.
- Ball valve design provides for high flow rate.
- High viscosity fluids such as grease can be applied.

The handle of the ball valve locks the sleeve to prevent disconnection of the plug during use.

Interchangeable with standard TSP CUPLA plug in the same size.

Specifications

Model	BV-2TSF	BV-3TSF	BV-4TSF	BV-6TSF	BV-8TSF
Size (Thread)	1/4"	3/8"	1/2"	3/4"	1"
Body material	Brass				
Pressure unit	MPa	kgf/cm ²	bar	PSI	
Working pressure	1.0	10	10	145	
Seal material	CUPLA Part		Seal material	Mark	Working temperature range
Working temperature range*1	Ball Valve Part		Fluoro rubber	FKM	-5°C to +120°C
			Fluoropolymer resin	-	

*1: The operable temperature range depends on the operating conditions.

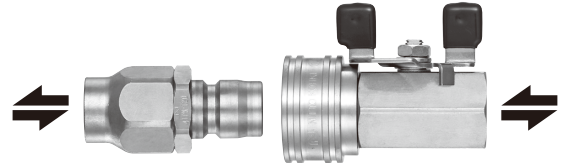

Maximum Tightening Torque

Nm {kgf·cm}

Application

TSP CUPLA Socket with Ball Valve

TSP CUPLA Socket
+
Commercially Available Ball Valve

Overall length reduced by around 30%

Compact and enhanced sealing design

Connection part between a Standard TSP CUPLA socket and a commercially available ball valve is eliminated for enhanced sealing and the overall length is reduced by around 30%.

Accessory

CUPLA ADAPTER for Braided Hose Connection

Can be screwed into CUPLA with female threads, 3/8", 1/2", 3/4"

See [page 166](#) for the details.

For Medium Pressure

SP CUPLA Type A

For medium pressure general applications

Working pressure

1.5 to 7.5
1.5 to 7.5 MPa
(15 to 76 kgf/cm²)

Valve structure

Two-way shut-off

Applicable fluids

Note: Depending on the temperature of steam / hot water, the heat may damage seal materials.

For medium pressure applications, with automatic shut-off valves in both socket and plug. Various body materials, sizes and end configurations. Plugs with male thread end are also available.

- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- Available in various standard body materials, sizes and end configurations to cope with diversified applications and operating situations.

New self-aligned valve design provides better seal

The new design of the valve head makes smooth self-aligned return to its original position when socket and plug are disconnected. This mechanism enhances safety sealing of individual socket or plug when disconnected (1 to 8SP-A Type).

Specifications

Body material		Brass				Stainless steel (SUS304), Steel (Nickel plated)

Accessory

CUPLA ADAPTER for Braided Hose Connection

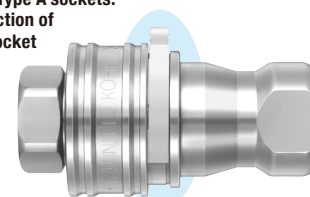

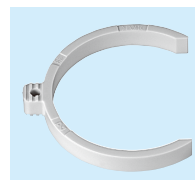

Can be screwed into CUPLA with female threads, 3/8", 1/2", 3/4"

See [page 166](#) for the details.

SLEEVE STOPPER for SP CUPLA Type A

Sleeve stopper exclusively for SP CUPLA Type A sockets. Attaching the sleeve stopper after connection of socket and plug locks the sleeve of the socket and prevents unexpected disconnection.

Attached to SP CUPLA Type A

See [page 165](#) for the details.

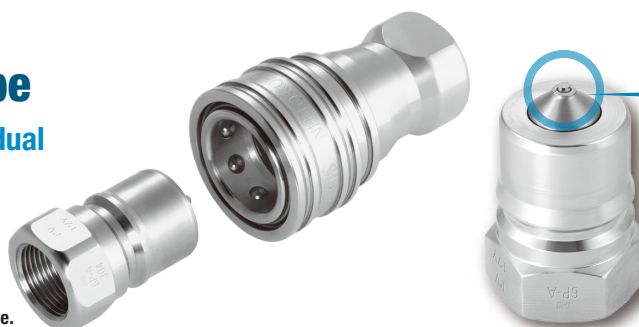

Related product

For Medium Pressure / Connectable with residual pressure [With Purge Valve]

SP CUPLA TypeA PV Type

SP CUPLA Type A equipped with residual pressure eliminating valve.

- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- Smooth connection even when there is residual pressure when connecting.
- No residual pressure eliminating operation required on your piping. Just connect to purge the remaining pressure.

Made-to-order

Purge Valve

The small purge valve is pressed and completes the connection by releasing the residual pressure.

See [page 161](#) for the details.

For Medium Pressure

HOT WATER CUPLA

HW Type

For temperature control piping

Working pressure

2.0
2.0 MPa
(20 kgf/cm²)

Valve structure

Two-way shut-off

Applicable fluids*

Water

Steam

* This product is designed for use with water from -20°C to +180°C. When used with other fluids, check the suitability of the seal and body material.

Employs sealing material with excellent heat resistance.
Suitable for hot water applications such as plastic moldings.

- Separation prevention mechanism prevents accidental disconnection caused by vibration or impact.
- Nickel plated on the liquid contact parts to improve corrosion resistance.
- The socket has double O-ring for improved seal.

Specifications

Body material	Brass (Nickel plated)			
Size (Thread)	Plug : R 1/4, R 3/8, R 1/2 / Socket : Rc 1/4, Rc 3/8, Rc 1/2			
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	2.0	20	20	290
Seal material	Seal material	Mark	Working temperature range	Remarks
Working temperature range*1	Fluoro rubber	FKM	-20°C to +180°C	Standard material

*1: The operable temperature range depends on the operating conditions.

Maximum Tightening Torque

Nm {kgf·cm}

Size (Thread)	1/4"	3/8"	1/2"
Torque	9 {92}	12 {122}	30 {306}

On installation or removal always use correct size spanner / wrench on the hexagon section of socket/plug body.

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Interchangeability

Socket and plug of different sizes cannot be connected.

SP CUPLA Type A and HW Type CUPLA of the same size can be connected regardless of end configurations.

However, SP CUPLA Type A has different seal material characteristics, so the product specification and durability will differ.

Conduct performance evaluation test under your actual operating environment and conditions within range of the working conditions of the product.

Minimum Cross-Sectional Area

(mm²)

Model	HW-2S-FxHW-2P-M	HW-3S-FxHW-3P-M	HW-4S-FxHW-4P-M
Min. Cross-sectional area	26	51	73

Suitability for Vacuum

1.3×10⁻¹ Pa {1×10⁻³ mmHg}

Socket only	Plug only	When connected
—	—	Operational

Admixture of Air on Connection

May vary depending upon the usage conditions.

(mL)

Model	HW-2S-FxHW-2P-M	HW-3S-FxHW-3P-M	HW-4S-FxHW-4P-M
Volume of air	1.2	2.7	3.9

Volume of Spillage per Disconnection

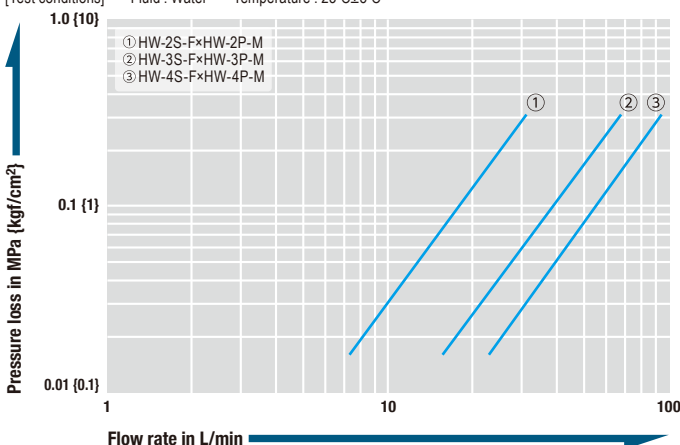

May vary depending upon the usage conditions.

(mL)

Model	HW-2S-FxHW-2P-M	HW-3S-FxHW-3P-M	HW-4S-FxHW-4P-M
Volume of spillage	0.8	2.1	3.2

Flow Rate – Pressure Loss Characteristics

[Test conditions] - Fluid : Water - Temperature : 23°C±5°C

Separation prevention mechanism (Safety lock)

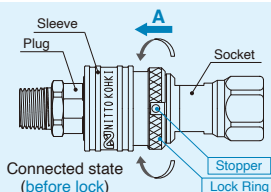

Unlocked

Locked

How to lock

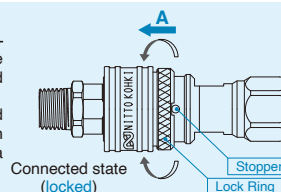

Slide the Lock Ring in the direction of the **arrow A** and rotate it simultaneously. When the Stopper is aligned with the shallower cutout on the Lock Ring, it will be in an inseparable state.

Connected state (before lock)

How to unlock

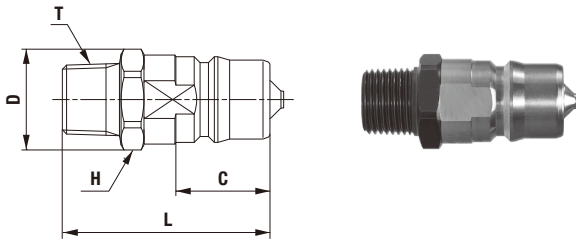

Slide the Lock Ring in the direction of the **arrow A** and rotate it simultaneously. When the Stopper is aligned with the deeper cutout on the Lock Ring, it will be in a separable state.

Connected state (locked)

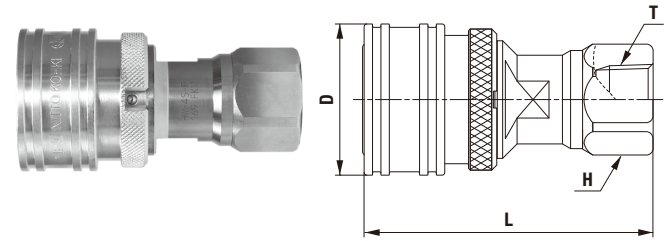

Models and Dimensions

Plug Male thread

Model	Application (Thread)	Mass (g)	Dimensions (mm)				
			L	C	øD	H (WAF)	T
HW-2P-M	Rc 1/4	41	(44)	22	18.5	Hex.17	R 1/4

Approximate time for Valve / O-ring replacement

*Test results by us

Test conditions

• Testing device: Mold temperature controlling machine • Fluid: Clean water • Test temperature: 160°C, 180°C • Test condition: Continuous test with CUPLA connected

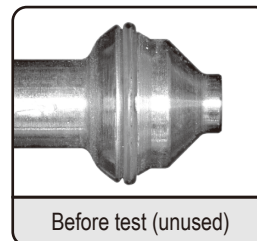

Valve

when
180°C

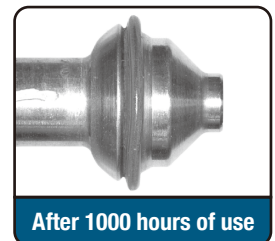

Please replace whole CUPLA in approximately 1000 hours.
The valve cannot be replaced.

when
160°C

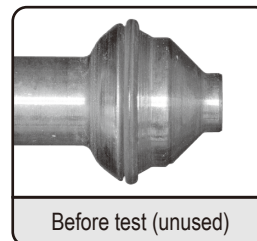

Please replace whole CUPLA in approximately 3000 hours.
The valve cannot be replaced.

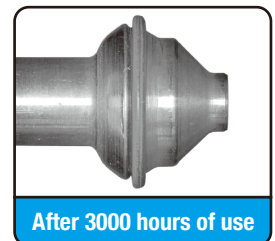

Before test (unused)

Hot water
180°C

After 1000 hours of use

Before test (unused)

Hot water
160°C

After 3000 hours of use

The packing starts to swell

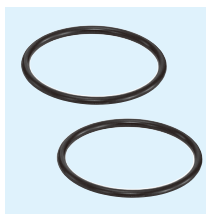

O-ring

when
180°C

Please replace the O-rings of the Socket in approximately 700 hours.
Please replace the two O-rings at once.

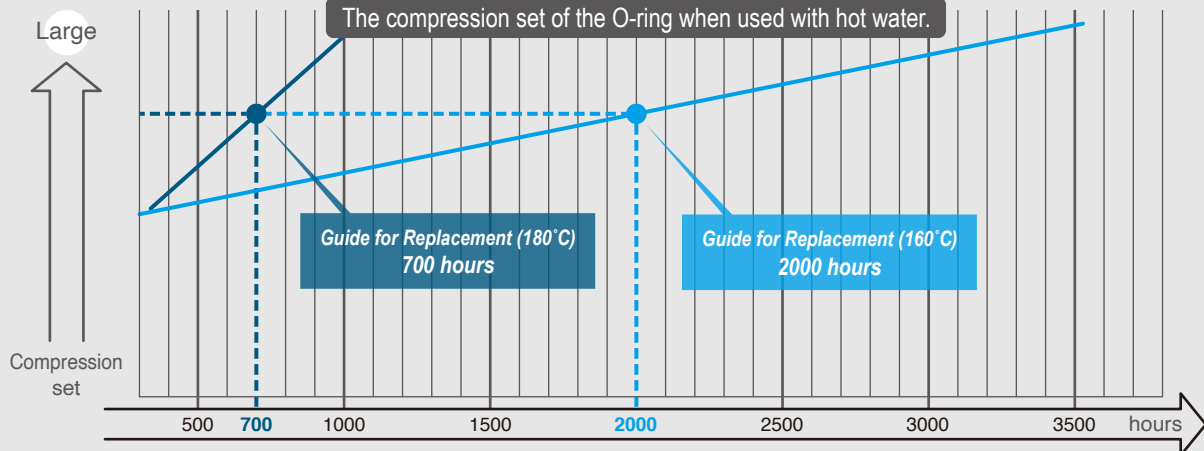

when
160°C

Please replace the O-rings of the Socket in approximately 2000 hours.
Please replace the two O-rings at once.

Accessory
O-ring (2 pieces/set)

Please apply grease at the replacement.

⚠ Caution

*Hot water continuous flow test by a mold temperation controller

Valve: For continuous use of 3000 hours at 160°C / 1000 hours at 180°C

O-ring: For continuous use of 2000 hours at 160°C / 700 hours at 180°C

- Air will be admixed at the time of connection. Please purge the air by the equipment side when using with hot water.
 - If additives are mixed in water or the piping is filled with steam, the lifetime of the seal will be decreased.
- When using in such an environment, conduct performance evaluation test by actual product.

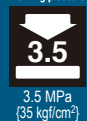

Although we have confirmed that there is no leakage, it is our experimental value and not a guaranteed value. Please consider above hours just as a guide. The durability of the seal differs depending on the customers usage conditions. (Number of connection / disconnection, fluid additives, etc.)

For Medium Pressure

ZEROSPILL CUPLA

Low spill type for medium pressure use

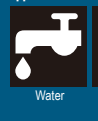

Working pressure

Valve structure

Applicable fluids

Unique seal design reduces both liquid spillage and air ingress.

- New valve design offers smooth zero-friction movement.
- Push to connect design.
- A variety of body materials and sizes have been standardized to support a wide range of applications and situations.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.

Specifications

Body material	Brass		Stainless steel (SUS 304)

* The photos above show stainless steel model ZEL-8P and ZEL-8S. The profiles of brass couplings are the same as those of the stainless steel couplings.

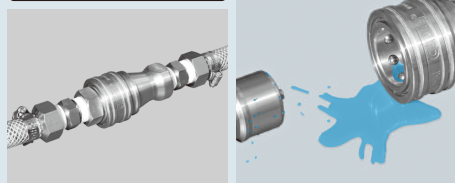

Main Features

Unique seal design reduces both liquid spillage and air ingress

To compare with SP CUPLA Type A.

Volume of spillage:
about 96% less vs SP CUPLA Type A

SP CUPLA Type A

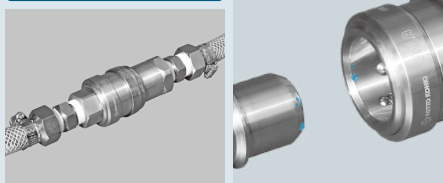

Connected

Disconnected

Volume of air ingress:
about 94% less vs SP CUPLA Type A

ZEROSPILL CUPLA

Connected

Disconnected

*blue colored water is used to show volume of spillage clearly.

Reliable zero friction valve

New valve design offers smooth zero-friction movement resulting in reduced chance of malfunction caused by deterioration of valve parts.

Push-to-connect design

One-hand easy operation

Just push the plug into the socket for simple and secure connection.
This reduces connection time and improves efficiency.

Just push the plug into the socket

Simple and secure connection

Accessory

CUPLA ADAPTER for Braided Hose Connection

Can be screwed into CUPLA with female threads, 3/8", 1/2", 3/4"

See page 166 for the details.

For High Pressure

HSP CUPLA

For hydraulic pressure from 14.0 to 20.6 MPa {142 to 210 kgf/cm²}

Working pressure

Valve structure

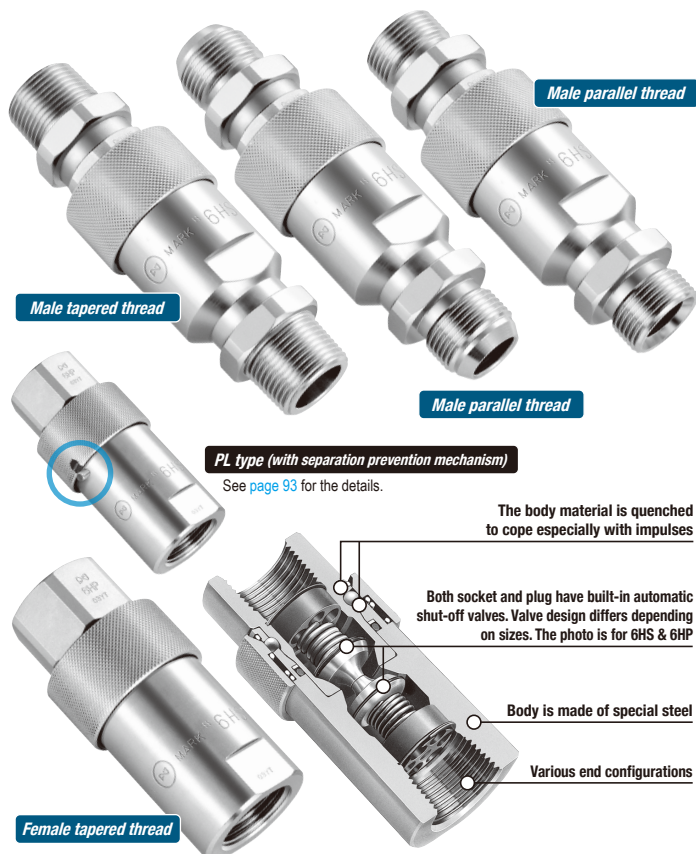

Applicable fluid

Special steel body is tough against vibration and impact! Male and female thread end configurations are available. Low pressure loss characteristic suits hydraulic equipment applications.

- Quenched special steel body!
Powerful impact resistance, especially against impulses.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- In addition to conventional female thread type, male thread types (male tapered thread, male parallel thread with 30° flare, and male parallel thread with 30° cone-seat) are available. Male thread types are designed especially for direct connection to hydraulic power units effectively.
- Male parallel thread type complies with both metal seal and O-ring seal. (In case of O-ring seal, O-rings available in the market can be used.)
- Optional HSP-DC CUPLA series are available for die-casting machine applications with severe pressure variation. (See page 158 of HSP-DC CUPLA for details.)
- The overall length of male thread type is shorter than that of female thread type plus conversion nipple available in the market.
- PL type (with separation prevention mechanism) for 2HS to 8HS (except 66HS) with female thread is also available as standard.

Specifications

8HS-PL	R 1	1042	93	(58)	46	Rc 1

At connection

Align the cutout in the sleeve with the stopper, and pull the sleeve to connect the plug.

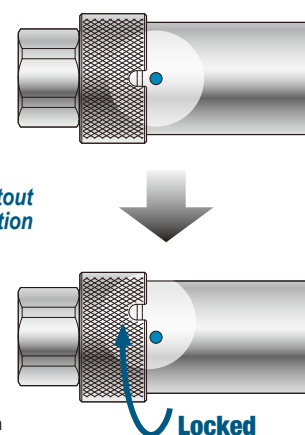

Locking the sleeve

Without alignment of the cutout with the stopper, disconnection cannot be made.

Accidental disconnection is prevented.

Align the cutout in the sleeve with the stopper, and pull the sleeve to disconnect.

The stopper is marked with blue for visual understanding.

For High Pressure

HYPER HSP CUPLA

Connects hydraulic piping even with residual pressure up to 20.6 MPa {210 kgf/cm²}

Working pressure

20.6
20.6 MPa
(210 kgf/cm²)

Valve structure

Two-way shut-off

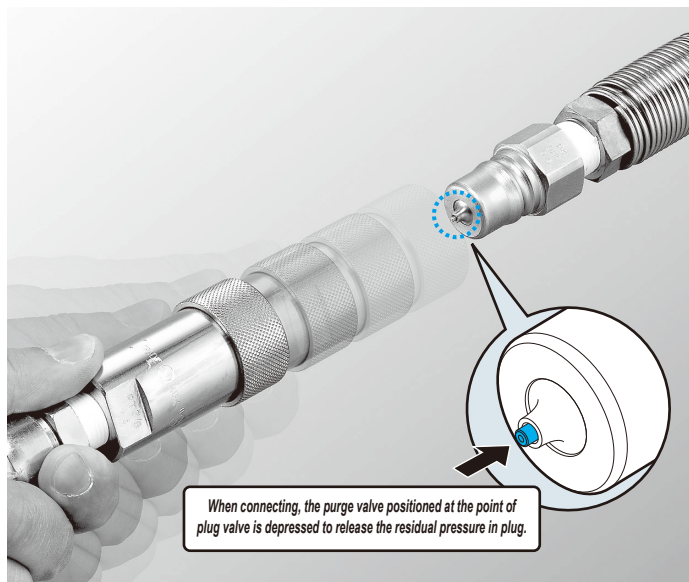

Applicable fluid

Hydraulic oil

Purge function will set you free from the troublesome residual pressure elimination before connection and let you achieve efficient and frequent hydraulic pipe line coupling.

- Both socket and plug have built-in automatic shut-off valves to prevent fluid spill out when disconnected.
- Interchangeable with standard HSP CUPLA plug or socket in the same size.

Specifications

Body material	Special steel (Nickel plated)			
Size (Thread)	1/4", 3/8", 1/2", 3/4", 1"			
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	20.6	210	206	2990
Seal material	Seal material	Mark	Working temperature range	Remarks
Working temperature range *1	Nitrile rubber	NBR	-20°C to +80°C	Standard material

*1: The operable temperature range depends on the operating conditions.

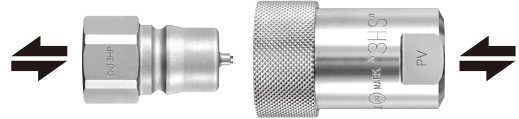

Maximum Tightening Torque

Residual Pressure Release (or purge) Mechanism

While connecting, the purge valve indicated with a circle is being pushed and releasing the residual pressure

Note: Either socket or plug of HYPER HSP CUPLA must be used on the line where the residual pressure remains. The counterpart of HYPER HSP must be either plug or socket of standard HSP CUPLA. HYPER HSP CUPLA can be connected under the residual pressure in the line, but cannot during pressurizing. It may lead to incomplete connection, durability deterioration or possible valve fly out.

For High Pressure

210 CUPLA

For hydraulic pressure up to 20.6 MPa {210 kgf/cm²}

Working pressure

Valve structure

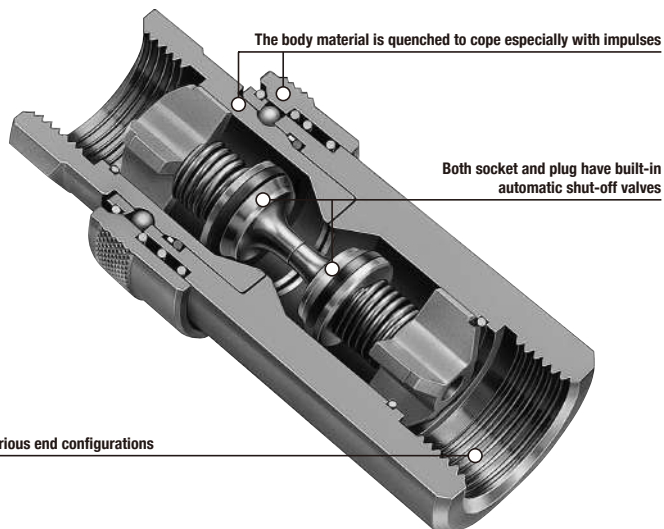

Applicable fluid

Hydraulic CUPLA for general purposes with a working pressure up to 20.6 MPa. Low pressure loss, suitable for hydraulic equipment.

- Hydraulic CUPLA with a working pressure of 20.6 MPa {210 kgf/cm²}.
- Structure is designed to reduce pressure loss to the lowest, and is suitable for hydraulic applications that need big flow rates.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid outflow when disconnected.

Various end configurations

Specifications

Application Example

For High Pressure

HSU CUPLA

Stainless steel CUPLA for high pressure up to 21.0 MPa {214 kgf/cm²}

The flow volume is increased by between 14 to 44% while at the same time the coupled length is reduced by at least 10% compared with the S210 CUPLA.

- Body material is excellent corrosion resistant stainless steel (SUS304). Suitable for use in tough/harsh environments such as offshore applications.
- Separation prevention mechanism is easily locked by turning the sleeve after connection.
- Despite having a stainless steel body, the working pressure, 21.0 MPa, of HSU CUPLA is comparable to that of special steel body CUPLA such as HSP CUPLA series.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid outflow on disconnection.
- Hydrogenated nitrile rubber (HNBR) is used as a seal material for wide variety of liquids.

Specifications

Body material	Stainless steel (SUS304)			
Size (Thread)	1/4", 3/8", 1/2", 3/4", 1"			
Pressure unit	MPa	kgf/cm ²	bar	PSI

Separation Prevention Mechanism

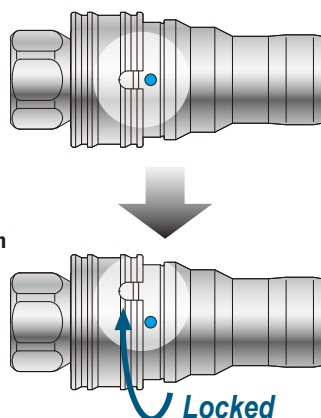

Easy to operate separation prevention mechanism enhances operator safety.

At connection

Locking the sleeve

Without alignment of the cutout with the ball stopper disconnection cannot be made.

Separation prevention mechanism is easily locked by turning the sleeve after connection.

Accidental disconnection is prevented.

The stopper is marked with blue for visual understanding.

Gas

Stainless steel for excellent corrosion resistance!
The unique “inner seal mechanism” accepts a working pressure up to 20.6 MPa.

- Body material is excellent corrosion resistant stainless steel (SUS304). Suited for use in tough conditions such as ocean development.
- Although it is made of stainless steel, the unique “inner seal mechanism” enables the working pressure of 20.6 MPa {210 kgf/cm²}, the same as special steel's.
- Separation prevention mechanism (safety lock) ensures tight and secured connection under vibration or impacts.
- Both socket and plug have built-in automatic shut-off valves that prevent fluid outflow on disconnection.

How to operate the separation prevention mechanism (safety lock)**How to lock****Connected state (before lock)**

Slide the Lock Ring in the direction of the arrow A and rotate it in either direction simultaneously. When the Stopper is aligned with the shallow cutout on the Lock Ring, it will be locked.

How to unlock**Connected state (locked)**

Slide the Lock Ring in the direction of the arrow A and rotate it in either direction simultaneously. When the Stopper is aligned with the deeper cutout on the Lock Ring, it will be unlocked.

Application Example

Ocean development

For High Pressure

280 CUPLA

For hydraulic pressure up to 27.5 to 31.5 MPa {281 to 321 kgf/cm²}

Working pressure

Valve structure

Applicable fluid

**Copes with higher pressure lines in hydraulic equipment!
Low pressure loss is ideal for hydraulic equipment.**

- Conforms to international standard ISO 7241-1A.
- Hydraulic CUPLA with the working pressure up to 27.5 to 31.5 MPa {281 to 321 kgf/cm²}.
- Structure keeps pressure loss extremely low, particularly ideal for hydraulic applications requiring high flow rates.
- Both socket and plug have built-in automatic shut-off valves to prevent fluid spill out when disconnected.
- Special steel body material is adopted for its excellent strength and additional quenching treatment is done to withstand hydro pressure impacts.

Specifications

For High Pressure

FLATFACE CUPLA

F35

For hydraulic pressures up to 35.0 MPa {357 kgf/cm²} with flat contact face

Working pressure

35.0 MPa
(357 kgf/cm²)

Valve structure

Two-way shut-off
(Spill Reduction)

Applicable fluid

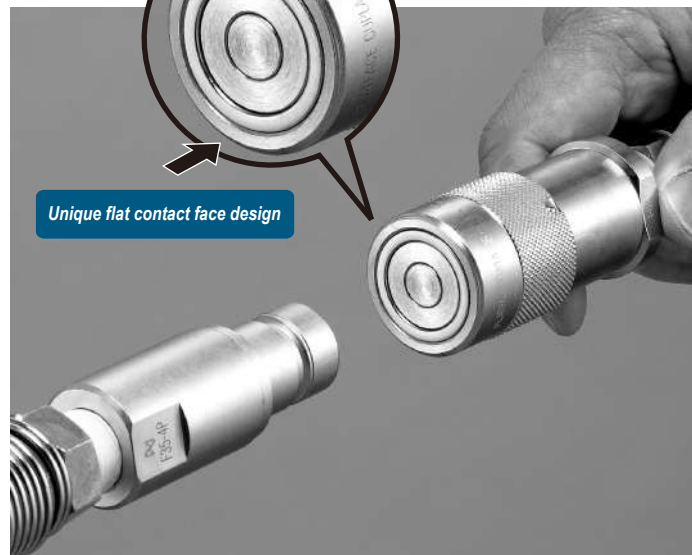

Hydraulic oil

Flat contact face design reduces spill upon disconnection.

- Flat contact face design makes it easy to clean dust and foreign matter adhered on the surface of coupling so as to prevent them from entering inside and thus causing faulty operation of connection or disconnection.
- Flat contact face design minimizes air admixture during connection to keep the possible malfunction of equipment caused by the air bubbles in the hydraulic line at minimum level.
- Push-to-connect operation.
- Separation prevention mechanism is easily locked by turning the sleeve after connection. It prevents accidental disconnection even when vibration or impact is applied to CUPLA.
- The special design reduces pressure loss considerably, and especially suited to hydraulic applications in which big flow is needed. Both socket and plug have built-in automatic shut-off valves that prevent fluid spill out on disconnection.

Unique flat contact face design

Torque	28 {286}	40 {408}	80 {816}	150 {1530}	250 {2550}

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Interchangeability

Socket and plug of different sizes cannot be connected.

Minimum Cross-Sectional Area

(mm²)

Model	F35-2SP	F35-3SP	F35-4SP	F35-6SP	F35-8SP
Minimum cross-sectional area	21.2	32.2	78.5	149.6	227.0

Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

Admixture of Air on Connection

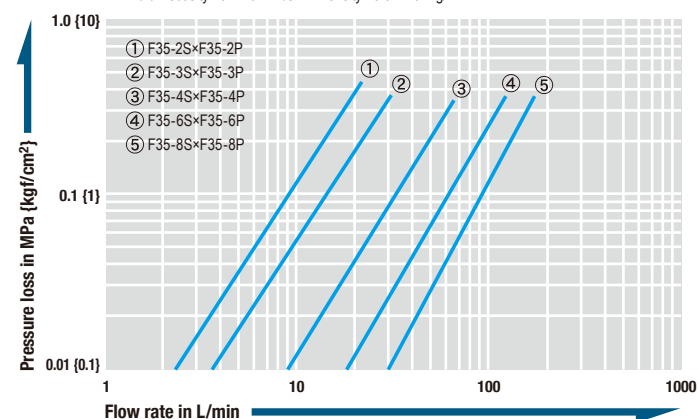

May vary depending upon the usage conditions.

(mL)

Model	F35-2SP	F35-3SP	F35-4SP	F35-6SP	F35-8SP
Volume of air	0.1	0.1	0.2	0.3	0.4

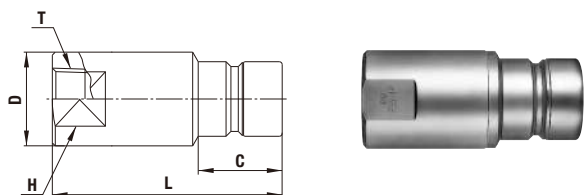

Flow Rate – Pressure Loss Characteristics

[Test conditions] - Fluid : Hydraulic oil - Temperature : 30°C±5°C
- Fluid viscosity : 32×10⁻⁶ m²/s - Density : 0.87×10³ kg/m³

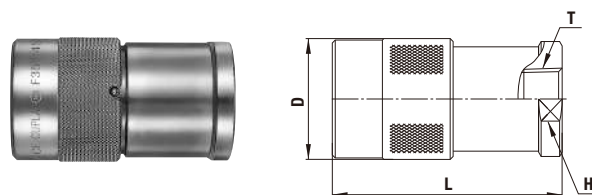

⚠ Precautions for use

Do not connect / disconnect CUPLA when pressure is applied or remaining.

Application Example

Snow plow

For High Pressure FLATFACE CUPLA FF

For hydraulic pressure up to 35.0 MPa {357 kgf/cm²} with flat contact face

Working pressure

35.0 MPa
(357 kgf/cm²)

Valve structure

Two-way shut-off
(Spill Reduction)

Applicable fluid

Hydraulic oil

Compared with 350 CUPLA and FLATFACE CUPLA F35, the flow volume is increased 1.5 to 2 times.

*Increase ratio of each flow volume depends on the CUPLA product size.

- "Airless valve shut-off" design minimizes spillage volume on disconnection and admixture volume of air on connection.
- Suitable for hydraulic lines with drastic high pressure pulsation such as in die-casting machines.
- Separation prevention mechanism preventing accidental disconnection under vibration or impacts enhances workability and safety.
- Sizes are Rc 3/8, Rc 1/2, Rc 3/4, and Rc 1.

*Only the same size of socket and plug can be connected.

Offset concave flat face enables quick and smooth connection

Unique flat face design

Concaved offset for the flat face on socket guides plug for quick and smooth centering and connection, but still easy to wipe off dirt and dusts.

Hexagon nut for easy mount

Specifications

Body material	Special steel (Nickel plated)			
Size (Thread)	3/8", 1/2", 3/4", 1"			
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	35.0	357	350	5080

FF-8S	R 1	1865	(109.5)	(66)	Hex.54	Rc 1

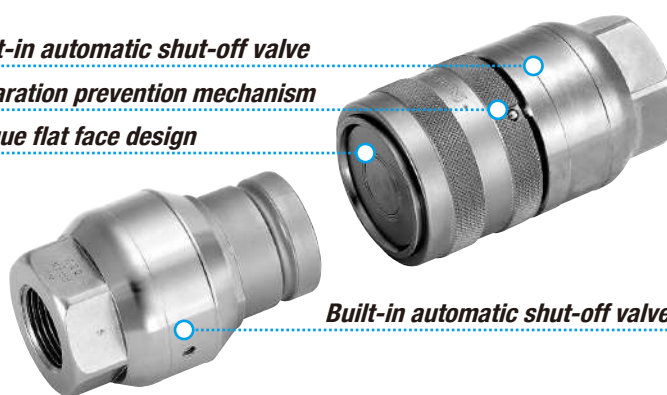

Applications

- Hydraulic piping for die-casting machines
- Casting machines
- Electric furnaces
- Molding presses
- Forging press
- Powdery alloy presses
- Extrusion molding machines
- Machine tools
- Iron manufacturing blast furnaces
- Continuous casting machines
- Rolling mills
- Pipe forging machines
- Furnace opening / closing machines
- Glass molding machines, etc.

Built-in automatic shut-off valve

Separation prevention mechanism

Unique flat face design

Built-in automatic shut-off valve

For High Pressure

450B CUPLA

For hydraulic pressure up to 44.1 MPa {450 kgf/cm²}

Working pressure

44.1

44.1 MPa
(450 kgf/cm²)

Valve structure

Two-way shut-off

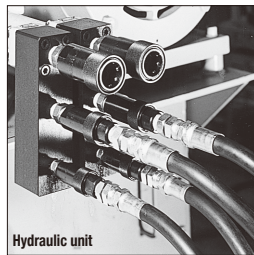

Applicable fluid

Hydraulic oil

Metal-touch valve system with superior durability!
Separation prevention mechanism gives secure connection.

- CUPLA for higher working pressure up to 44.1 MPa {450 kgf/cm²}.
- Separation prevention mechanism is easily locked by turning the sleeve after connection.
- Both socket and plug have metal-touch automatic shut-off valves that prevent fluid spill out on disconnection.

Hydraulic unit

Specifications

Body material	Special steel (Nickel plated)			
Size (Thread)	3/8"			
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	44.1	450	441	6400
Seal material Working temperature range ^{*1}	Seal material	Mark	Working temperature range	Remarks
	Nitrile rubber	NBR	-20°C to +80°C	Standard material
	Fluoro rubber	FKM	-20°C to +180°C	Made-to-order item
Stand-alone leakage rate on either socket or plug	0.1 mL/min at 0.3 MPa {3 kgf/cm ² }			

^{*1}: The operable temperature range depends on the operating conditions.

Maximum Tightening Torque

Nm {kgf·cm}

Torque	40 (408)
--------	----------

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Minimum Cross-Sectional Area

(mm²)

Minimum cross-sectional area	37
------------------------------	----

Suitability for Vacuum

1.3 Pa {1×10⁻² mmHg}

Socket only	Plug only	When connected
—	—	Operational

Admixture of Air on Connection

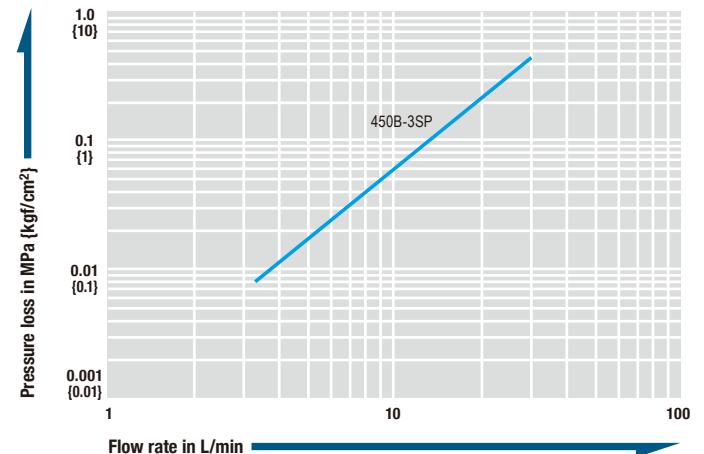

May vary depending upon the usage conditions.

(mL)

Volume of air admixture	1.43
-------------------------	------

Flow Rate – Pressure Loss Characteristics

[Test conditions] - Fluid : Hydraulic oil - Temperature : 25°C±5°C
- Fluid viscosity : 32×10⁻⁶ m²/s - Density : 0.87×10³ kg/m³

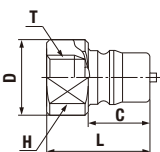

Precautions for use

There is no interchangeability between 450B CUPLA and HSP CUPLA, 210 CUPLA or 280 CUPLA. Do not connect each other even if some sizes are approximate.

Models and Dimensions

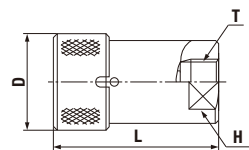

WAF : WAF stands for width across flats.

Plug Female thread

Model	Application (Thread)	Mass (g)	Dimensions (mm)				
			L	C	øD	H(WAF)	T
450B-3P	R 3/8	95	37.5	22.5	28	24	Rc 3/8

Socket Female thread

Model	Application (Thread)	Mass (g)	Dimensions (mm)			
			L	øD	H(WAF)	T
450B-3S	R 3/8	285	59.5	(36)	24	Rc 3/8

For High Pressure

700R CUPLA

For hydraulic pressure up to 68.6 MPa {700 kgf/cm²}

Working pressure

68.6
68.6 MPa
(700 kgf/cm²)

Valve structure

Two-way shut-off

Applicable fluid

Hydraulic oil

High pressure CUPLA for working pressures up to 68.6 MPa.

- Metal-touch valves use no rubber seal, and thus ensure excellent durability.
- Both socket and plug have metal touch automatic shut-off valves that prevent fluid spill out on disconnection.

Specifications

Body material	Special steel (Nickel plated)			
Size (Thread)	3/8", 1/2"			
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	68.6	700	686	9950
Seal material Working temperature range *1	Seal material	Mark	Working temperature range	Remarks
	Nitrile rubber	NBR	-20°C to +80°C	Standard material
	Fluoro rubber	FKM	-20°C to +180°C	Made-to-order item
Stand-alone leakage rate on either socket or plug	For 700R-3SP, 0.05 mL/min at 0.2 MPa {2 kgf/cm ² } For 700R-4SP, 0.5 mL/min at 0.3 MPa {3 kgf/cm ² }			

* Do not use in an environment where there is impulse pressure.

*1: The operable temperature range depends on the operating conditions.

Maximum Tightening Torque

Nm {kgf·cm}

Size (Thread)	3/8"	1/2"
Torque	40 {408}	85 {867}

MULTI CUPLA

MAM-B Type

Multiple port system

Working pressure

Valve structure

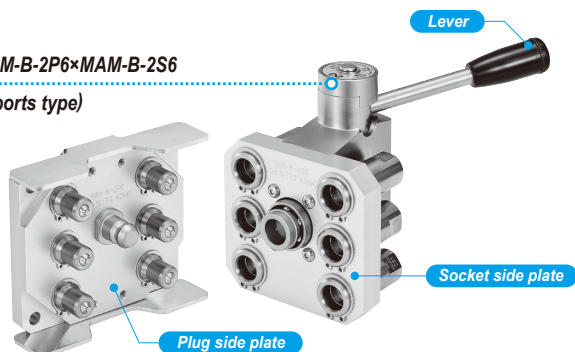

Applicable fluids

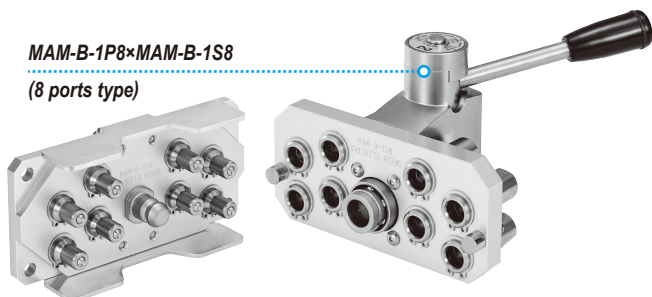

Simultaneously connects several ports securely in one operation. Greatly reduces changeover time in multiple ports replacement.

- Handles several ports at once.
- Simple manual lever action completes easy connection/disconnection.
- Two-stage lever operation prevents CUPLA from accidental dropping due to sudden detachment.
- Comes with lock mechanism to prevent accidental disconnection.
- Large flow equivalent to that of SP CUPLA Type A.
- Two kinds of plates are available for each size.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- Self-aligned valve design provides safety sealing of individual socket or plug when disconnected.

Dimensions (mm)

Made-to-order MULTI CUPLA is available on request, such as a combination of different sizes on the flange plate.

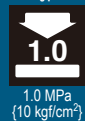

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

For Multi-Port Connection (Manual)

MULTI CUPLA

MAM-A-SP Type

For mounting onto plates of MULTI CUPLA MAM-A / MAM-B Type

Working pressure

1.0 MPa
(10 kgf/cm²)

Valve structure

Two-way shut-off

Applicable fluids

Air

Water

Individual CUPLA for mounting onto plates of MULTI CUPLA MAM-A / MAM-B Type.

- Large flow equivalent to that of SP CUPLA Type A.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- Self-aligned valve design provides safety sealing of individual socket or plug when disconnected.

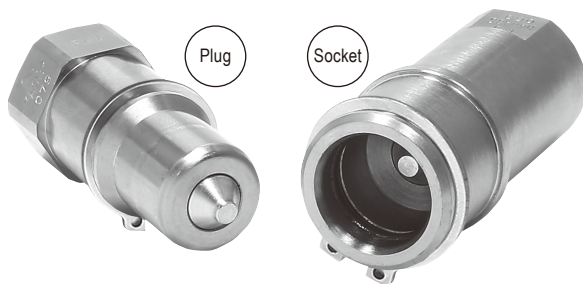

MULTI CUPLA series and plates that can mount MAM-A-SP Type

MAM-B Type (See page 115 to 117)

MAM-B Type plate (See page 126 to 127)

MAM-A Type (See page 119 to 122)

MAM-A Type plate (See page 128 to 130)

Specifications (Individual CUPLA)

Model	Plug	MAM-A-1P	MAM-A-2P	MAM-A-3P	MAM-A-4P
	Socket	MAM-A-1S	MAM-A-2S	MAM-A-3S	MAM-A-4S
Size (Thread)		Rc 1/8	Rc 1/4	Rc 3/8	Rc 1/2
Body material		Brass (Nickel plated)			
Pressure unit		MPa	kgf/cm ²	bar	PSI
Working pressure		1.0	10	10	145
Seal material	Sealing material	Mark	Working temperature range	Remarks	
Working temperature range *1	Fluoro rubber	FKM	-20°C to +180°C	Standard material	

- The specifications when used with individual CUPLA mounted onto the plate, conform to the specifications of the individual CUPLA.

*1: The operable temperature range depends on the operating conditions.

Maximum Tightening Torque

Nm {kgf·cm}

Size (Thread)	Rc 1/8	Rc 1/4	Rc 3/8	Rc 1/2
Torque	5 {51}	9 {92}	12 {122}	30 {306}

Interchangeability

No connection is possible between plates with different number of ports or different size.

Minimum Cross-Sectional Area per Port

(mm²)

Model	MAM-A-1S×MAM-A-1P	MAM-A-2S×MAM-A-2P	MAM-A-3S×MAM-A-3P	MAM-A-4S×MAM-A-4P
Minimum cross-sectional area	14	26	51	73

Suitability for Vacuum

1.3×10⁻¹ Pa {1×10⁻³ mmHg}

Socket only	Plug only	When connected
—	—	Operational

Admixture of Air on Connection per Port

(mL)

Model	MAM-A-1S×MAM-A-1P	MAM-A-2S×MAM-A-2P	MAM-A-3S×MAM-A-3P	MAM-A-4S×MAM-A-4P
Volume of air	0.6	1.1	2.7	3.9

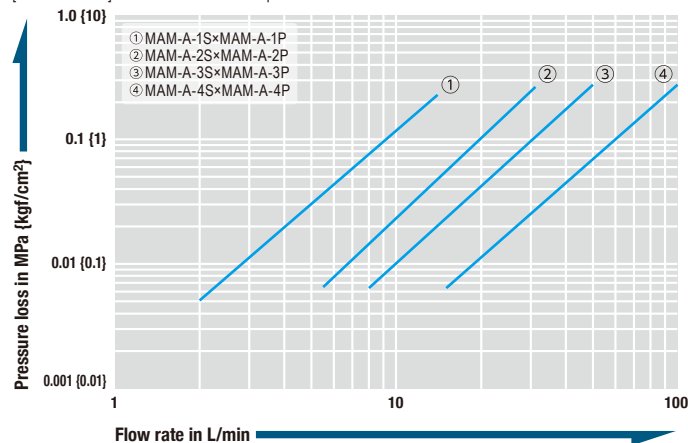

Volume of Spillage on Disconnection per Port

(mL)

Model	MAM-A-1S×MAM-A-1P	MAM-A-2S×MAM-A-2P	MAM-A-3S×MAM-A-3P	MAM-A-4S×MAM-A-4P
Volume of spillage	0.4	0.8	2.1	3.4

Flow Rate - Pressure Loss Characteristics

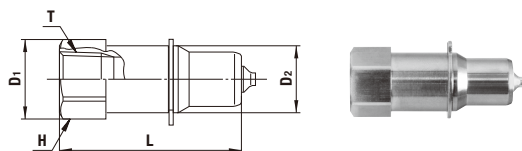

[Test conditions] - Fluid : Water - Temperature : 23°C±5°C

Models and Dimensions

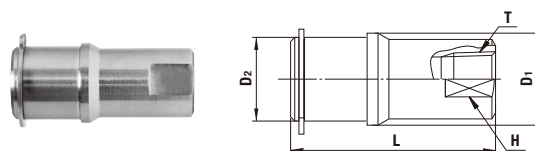

WAF : WAF stands for width across flats.

Plug For mounting onto plug side plate (Female thread)

Model	Application (Thread)	Mass (g)	Dimensions (mm)				
			L	øD1	øD2	H (WAF)	T
MAM-A-1P	R 1/8	25	34	17	14	14	Rc 1/8
MAM-A-2P	R 1/4	40	43.5	19	16	Hex.17	Rc 1/4
MAM-A-3P	R 3/8	62	47.5	23	20	Hex.21	Rc 3/8
MAM-A-4P	R 1/2	127	51.5	32	25	Hex.29	Rc 1/2

Socket For mounting onto socket side plate (Female thread)

Model	Application (Thread)	Mass (g)	Dimensions (mm)				
			L	øD1	øD2	H (WAF)	T
MAM-A-1S	R 1/8	49	41	17.5	16	14	Rc 1/8
MAM-A-2S	R 1/4	82	49	22	20	17	Rc 1/4

MAM-A-4S	R 1/2	256	61.5	32	30	29	Rc 1/2

Valve-less (Plug and Socket without valve) are available on request as made-to-order versions.
In such case, the model name ends with "-VL". (ex: MAM-A-2P-VL)

For Multi-Port Connection (Manual)

MULTI CUPLA

MAM-A-ZEL Type

For mounting onto plates of MULTI CUPLA MAM-A / MAM-B Type

Working pressure

1.0 MPa
(10 kgf/cm²)

Valve structure

Two-way shut-off
(Spill Reduction)

Applicable fluids

Air

Water

Individual CUPLA for mounting onto plates of MULTI CUPLA MAM-A / MAM-B Type.

Their “airless valve shut-off design” greatly reduces both liquid spillage and air admixture.

- Original valve structure reduces both liquid spillage and air admixture on connection and disconnection.
- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.

MULTI CUPLA series and plates that can mount MAM-A-ZEL Type

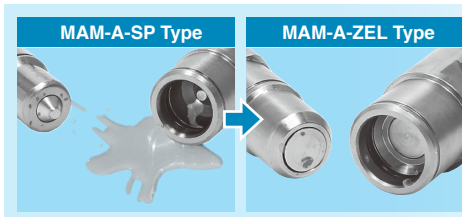

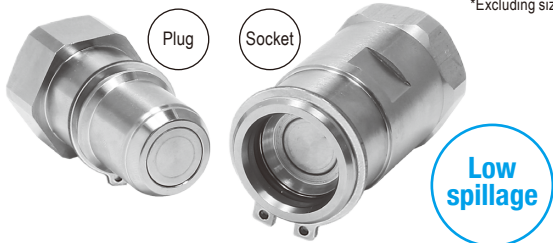

MAM-B Type* (See page 115 to 117)

MAM-B Type plate* (See page 126 to 127)

MAM-A Type (See page 119 to 122)

MAM-A Type plate (See page 128 to 130)

*Excluding size Rc 1/8

Typical spillage
(6 ports of size 1/4")
4.8 mL → 0.36 mL
(May vary. Depends on the application.)

Specifications (Individual CUPLA)

Model	Plug	MAM-A-ZEL-2P	MAM-A-ZEL-3P	MAM-A-ZEL-4P
	Socket	MAM-A-ZEL-2S	MAM-A-ZEL-3S	MAM-A-ZEL-4S
Size (Thread)		Rc 1/4	Rc 3/8	Rc 1/2
Body material		Brass (Nickel plated)

One way valve types (Plug without valve) are available on request as made-to-order versions.
In such case, the model name ends with "-VL". (ex: MAM-A-ZEL-2P-VL)

For Multi-Port Connection (Manual)

MULTI CUPLA

Plate for mounting
MAM-A-ZEL / MAM-A-SP Type

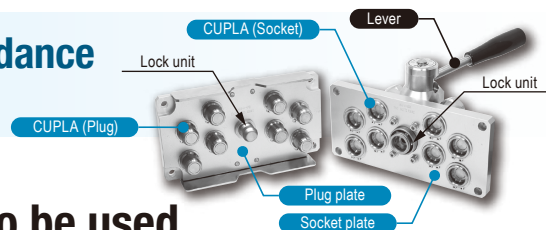

Plates for mounting MULTI CUPLA
MAM-A-ZEL and MAM-A-SP Type.

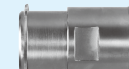

Specifications (Individual plate)

Plate type		MAM-B Type				MAM-A Type					
Model	Plug side	MAM-B-1P8-CL	MAM-B-1P12-CL	MAM-B-2P6-CL	MAM-B-2P8-CL	MAM-A-2P6-CL	MAM-A-2P12-CL	MAM-A-3P6-CL	MAM-A-3P12-CL	MAM-A-4P4-CL	MAM-A-4P8-CL
	Socket side	MAM-B-1S8-CL	MAM-B-1S12-CL	MAM-B-2S6-CL	MAM-B-2S8-CL	MAM-A-2S6-CL	MAM-A-2S12-CL	MAM-A-3S6-CL	MAM-A-3S12-CL	MAM-A-4S4-CL	MAM-A-4S8-CL
Number of ports		8	12	6	8	6	12	6	12	4	8
Body material		Aluminum alloy									
Ambient temperature range		0°C to +60°C									

Select the most suitable combination in accordance with your operating conditions.

1 Decide the [Type] and [Size] of CUPLA to be used

CUPLA	Low spill type	Plug	Size (Thread)	Model	Interchangeable Same size only	Low spill type	Socket	Size (Thread)	Model
		MAM-A-ZEL Type	1/8	—			MAM-A-ZEL Type	1/8	—
			1/4	MAM-A-ZEL-2P				1/4	MAM-A-ZEL-2S
			3/8	MAM-A-ZEL-3P				3/8	MAM-A-ZEL-3S
			1/2	MAM-A-ZEL-4P				1/2	MAM-A-ZEL-4S
	General purpose type	Plug	Size (Thread)	Model	No interchangeability Interchangeable Same size only	General purpose type	Socket	Size (Thread)	Model
	MAM-A-SP Type		1/8	MAM-A-1P		MAM-A-SP Type		1/8	MAM-A-1S
			1/4	MAM-A-2P				1/4	MAM-A-2S
			3/8	MAM-A-3P				3/8	MAM-A-3S
			1/2	MAM-A-4P				1/2	MAM-A-4S

MAM-A-ZEL and MAM-A-SP Type can be mounted on the same plates.

Note: MAM-A-ZEL Type is not interchangeable with the MAM-A-SP Type.

One way valve for MAM-A-ZEL (Plug without valve) and valve-less MAM-A-SP (Plug and Socket without valve) are available on request as made-to-order versions.

In such case, the model name ends with "-VL".
(ex: MAM-A-2P-VL)

2 Specify the required number of [Port]s

3 Select the [Plate]

Note: If CUPLA size is 1/4" and the number of ports is 6, either plate for MAM-A or MAM-B can be used. (Choose either one by the outer dimensions)

Plate	Coupling body		Size (Thread)	Number of ports	Plate model of Plug side	Plate model of Socket side	Outer dimensions
	MAM-A-ZEL Type	MAM-A-SP Type	1/8	8	MAM-B-1P8-CL	MAM-B-1S8-CL	See page 126
				12	MAM-B-1P12-CL	MAM-B-1S12-CL	See page 126
			1/4	6	MAM-A-2P6-CL	MAM-A-2S6-CL	See page 128
				8	MAM-B-2P6-CL	MAM-B-2S6-CL	See page 127
				12	MAM-B-2P8-CL	MAM-B-2S8-CL	See page 127
				12	MAM-A-2P12-CL	MAM-A-2S12-CL	See page 128
			3/8	6	MAM-A-3P6-CL	MAM-A-3S6-CL	See page 129
				12	MAM-A-3P12-CL	MAM-A-3S12-CL	See page 129
			1/2	4	MAM-A-4P4-CL	MAM-A-4S4-CL	See page 130
				8	MAM-A-4P8-CL	MAM-A-4S8-CL	See page 130

In order to balance the force of system pressure, place each CUPLA symmetrically from the lock unit (center).

Before use, please be sure to read "Safety Guide" described at the end of this book and "Instruction Sheet" that comes with the products.

For Multi-Port Connection (Automatic)

MULTI CUPLA MAS Type / MAT Type

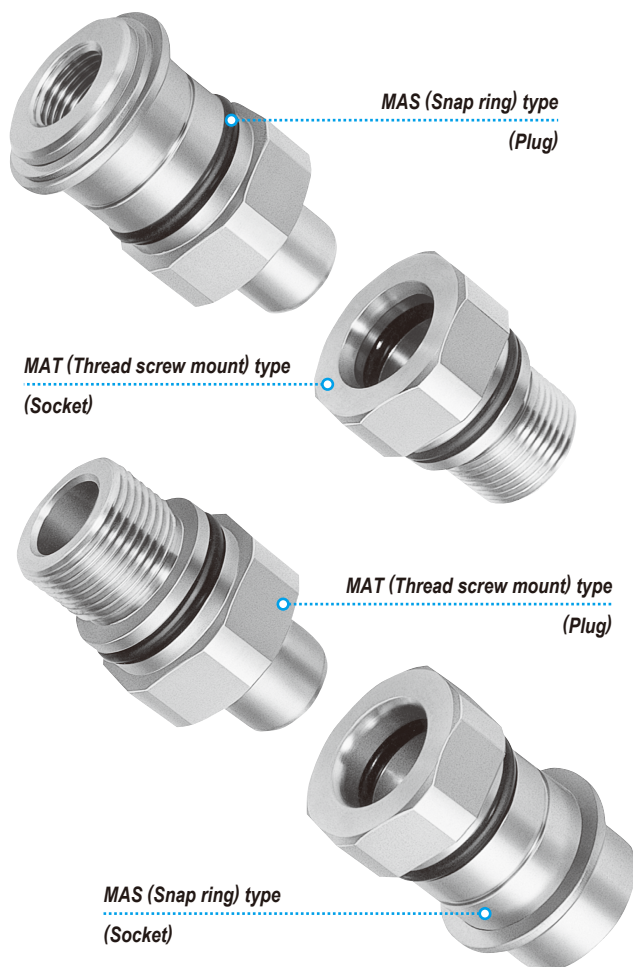

7.0 MPa {71 kgf/cm²} general purpose type

Connects multiple lines simultaneously with a single operation for different fluids and sizes.

- Effective for automated systems that connect/disconnect multiple lines simultaneously using hydraulic or pneumatic cylinders.
- Automatic shut-off valves in both sockets and plugs ensure no outflow of fluid on disconnection.
- Body materials other than stainless steel are available, which can be ordered with or without valves (made-to-order products).
- Snap ring and screw thread-in types to mount on the base plate are standardized.
- MAS type can accept axial eccentricity between socket and plug. The allowance of eccentricity is within the radius range of 0.3 mm.

* CUPLA connection or disconnection with fluid under dynamic pressure cannot be made.

Specifications

Body material	Stainless steel (Nickel plated)			
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	7.0	71	70	1020
Seal material	Sealing material	Mark	Working temperature range	
Working temperature range *1	Fluoro rubber	FKM	-20°C to +180°C	

*1: The operable temperature range depends on the operating conditions.

Maximum Tightening Torque

	Nm {kgf·cm}				
Size (Thread)	1/4"	3/8"	1/2"	3/4"	1"
Torque (MAS type)	14 {143}	22 {224}	60 {612}	90 {918}	120 {1224}
Size (Thread)	M20	M24	M30	M39	M45
Torque (MAT type)	50 {510}	50 {510}	50 {510}	70 {714}	80 {816}

Interchangeability

- MAS & MAT or MAS & MAS types of the same size are to be connected.
- Connection between the same MAT types is virtually not possible because there is no allowance for eccentricity.

Minimum Cross-Sectional Area

	(mm ²)				
Model	2SP	3SP	4SP	6SP	8SP
Min. cross-sectional area	23	41	76	145	224

Suitability for Vacuum

	1.3×10 ⁻¹ Pa {1×10 ⁻³ mmHg}		
Socket only	—	Plug only	When connected
—	—	—	Operational

Admixture of Air on Connection

	May vary depending upon the usage conditions. (mL)				
Model	2SP	3SP	4SP	6SP	8SP
Volume of air	1.1	2.4	3.2	10.5	17.0

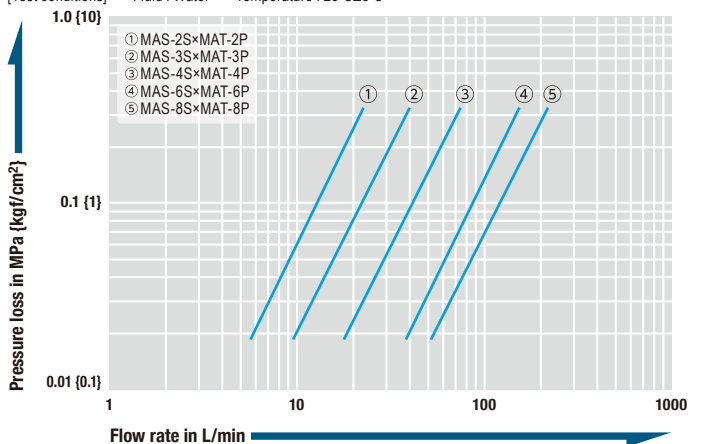

Load Required to Maintain Connection When Line Is Pressurized

Model	2SP	3SP	4SP	6SP	8SP
Maximum acceptable load N (kgf)	3200 {327}	5200 {531}	9200 {939}	13900 {1419}	20200 {2062}
Minimum load required to maintain connection N (kgf) *1	Px185+45 {px1.85+4.5}	Px310+70 {px3.1+7}	Px545+85 {px5.45+8.5}	Px850+95 {px8.5+9.5}	Px1225+120 {px12.25+12}

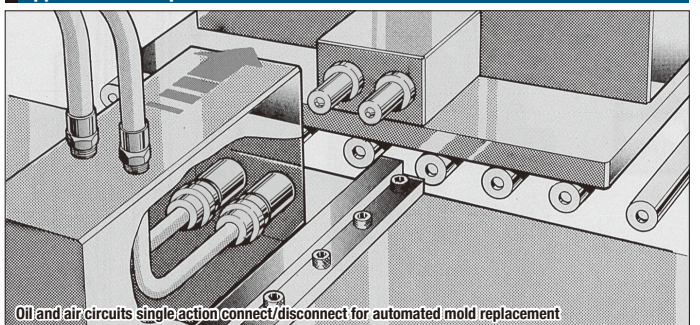

*1: Assign the actual value of pressure [P (MPa), p (kgf/cm²)] to the above formula to calculate the load. Maintain the connection with the minimum load or more, but not more than the maximum acceptable load.

Flow Rate - Pressure Loss Characteristics

[Test conditions] - Fluid : Water - Temperature : 23°C±5°C

For Multi-Port Connection (Automatic)

MULTI CUPLA

MALC-01 Type for Low Pressure Use

One-way shut-off type for Low pressure use

Solo use of socket is possible.
Suitable for operation of ejector pins to open/close valve gates in molding.

- Solo use of socket is possible.
- As in the case of MULTI CUPLA MALC-SP type and MALC-HSP type, the distance between the socket plate and the plug plate is designed to be 30 mm when connected. This means MULTI CUPLA MALC-01 type can also be installed mixed with any size of MALC-SP type and MALC-HSP type on the same plate.
- An axial eccentricity allowance of 2 mm eliminates precise centering at installation.
- Compact size with " thread screw mount " and "with flange" types available.

Specifications

Body material	Socket: Brass (Nickel plated) Plug: Brass (Nickel plated)			
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	1.0	10	10	145
Seal material	Sealing material		Mark	Working temperature range
Working temperature range *1	Nitrile rubber		NBR	-20°C to +80°C

*1: The operable temperature range depends on the operating conditions.

Maximum Tightening Torque

Nm {kgf·cm}

Thread screw mount	15 {153}
Flange	1.5 {15}

Interchangeability

- Sockets and plugs can be connected regardless of end configurations.
- Not interchangeable with MALC-SP Type (for medium pressure use) MALC-1SP or MALC-HSP Type (for high pressure use) MALC-1HSP.

Minimum Cross-Sectional Area

(mm²)

Minimum cross-sectional area	28
------------------------------	----

Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

Load Required to Maintain Connection When Line Is Pressurized

$$F = (P \times 160) + 50 \{ f = p \times 1.6 + 5 \}$$

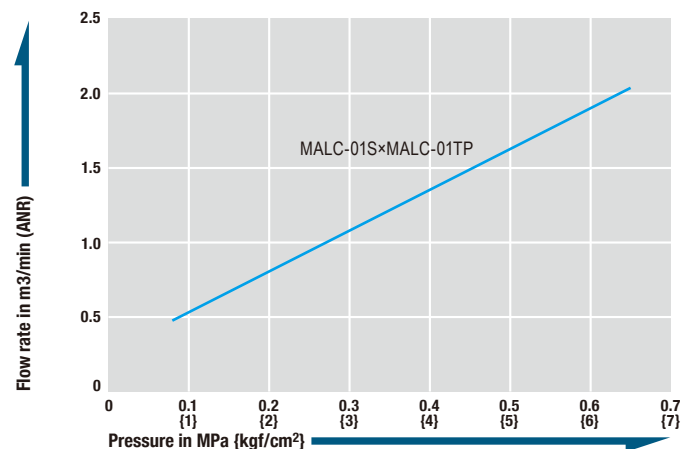

Minimum load required to maintain connection F [N] {f [kgf]}

Actual value of pressure P [MPa] {p [kgf/cm²]}

Assign the actual value of pressure [P (MPa), p (kgf/cm²)] to the above formula. Maintain the connection with this load [F (N), f (kgf)] or more. However, the maximum acceptable load is 500 N {51 kgf}.

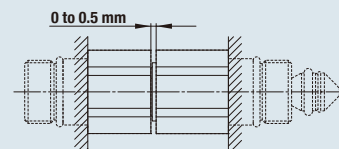

Pressure - Flow Characteristics

[Test conditions] - Fluid : Air

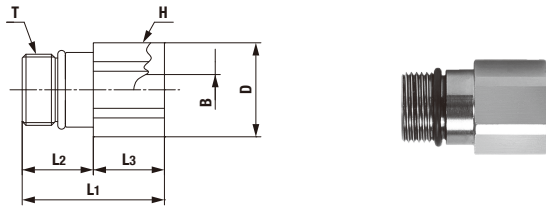

Acceptable distance between CUPLA

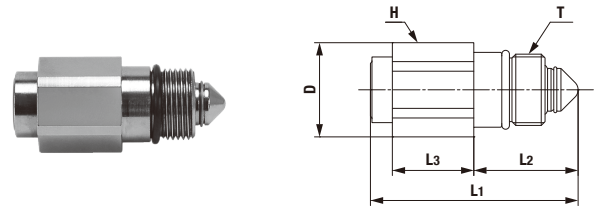

Socket and plug or plate must be used in contact with each other. Maximum 0.5 mm distance between socket and plug or plate is acceptable.

Solo use of socket is possible

The shape of counterpart for solo use of socket

The shape of counterpart for connection

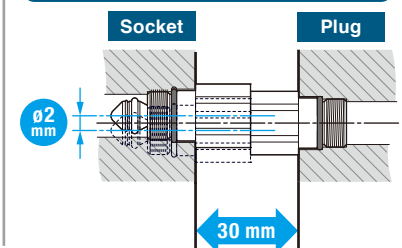

The angle of inclination between the socket and counterpart must be within 0.5 degrees.

Distance between plates is 16 mm for solo use of socket.

As in the case of MULTI CUPLA MALC-SP type and MALC-HSP type, the distance between the socket plate and the plug plate is designed to be 30 mm when connected. This means MULTI CUPLA MALC-01 type can also be installed mixed with any size of MALC-SP type and MALC-HSP type on the same plate.

A 2 mm axial eccentricity allowance.

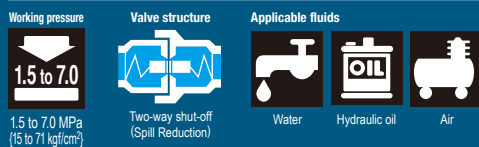

For Multi-Port Connection (Automatic)

MULTI CUPLA

MALC-SP Type for Medium Pressure Use

Low spill type for medium pressure use

A single operation enables simultaneous connections of multiple lines. A special design for medium pressure use minimizes air admixture in fluid lines upon connection.

- Compared with conventional MULTI CUPLA, approximately double flow rates are realized. This could reduce the size of required plates. (Rate of flow increase depends on CUPLA sizes.)
- The MALC type realizes a 2 mm axial eccentricity allowance, while conventional MULTI CUPLA is only 0.6 mm.
- Special valve design enables connection of socket and plug under pressure of up to 2 MPa. (up to 1.5 MPa for MALC-12SP.)
- When connected, the distance between the socket plate and the plug plate is designed to be 30 mm for all sizes. This means that any size of CUPLA can be mounted and used on the same plate.
- Low spill valves minimize outflow of fluid and admixture of air into the fluid line.

For High Purity Chemicals

SEMICON CUPLA

SP Type

For semiconductor manufacturing production installation

General purpose type with stainless steel body and rubber seal.
Electro-polished body for enhanced corrosion resistance.

- Body and valve springs are stainless steel (SUS304). Body is electro-polished for enhanced corrosion resistance.
- Seal materials can be selected to suit your fluid and application, to flexibly comply with your semiconductor production process requirements.
- All components are cleaned, assembled, inspected, and then packed in a clean room.
- Grease free. No grease is applied to the seal material.
- Each plug comes with a dust cap.
- Stainless steel SUS316 body and valve springs are available as made-to-order products.

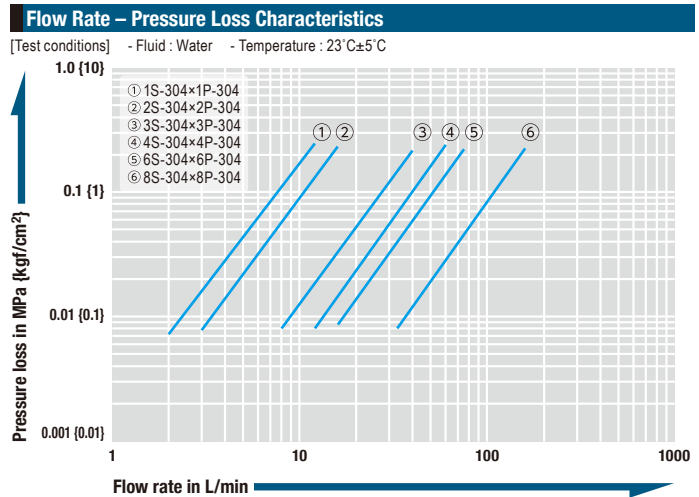

Specifications

For Inert Gas and Vacuum

SP-V CUPLA Type A

For vacuum

Working pressure

3.0 to 7.5
3.0 to 7.5 MPa
(31 to 76 kgf/cm²)

Valve structure

Two-way shut-off

Applicable fluids

Inert gas,
Vacuum

Gas

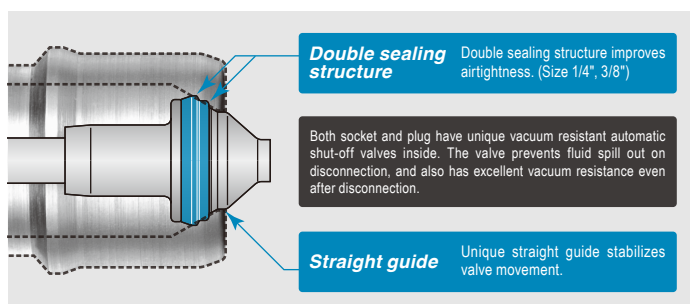

Air

Water

Automatic shut-off valves in both socket and plug for vacuum applications. Each can withstand a vacuum of as high as 1.3×10^{-1} Pa even when disconnected.

- Uses automatic shut-off valves with ultra-tight sealed construction in both socket and plug. Ideal for vacuum applications.
- Having automatic shut-off valves in both socket and plug facilitates easy fluid handling. Suitable for a wide range of vacuum applications as high as 1.3×10^{-1} Pa [1×10^{-3} mmHg] even when disconnected.
- Three types of seal material are available to suit any of the diversified production lines for air conditioners, refrigerators or similar.
- Can be connected with SP CUPLA Type A and SP-V CUPLA.

Specifications

Body material		Brass (Standard material)		Stainless steel (Standard material)	Stainless steel (Made-to-order item)
Size (Thread)		1/4", 3/8"	1/2", 3/4"	1/4", 3/8"	1/2", 3/4"
Working pressure	MPa	5.0	3.0	7.5	4.5
	kgf/cm ²	51	31	76	46
	bar	50	30	75	45

Seal material		Seal material	Mark	Working temperature range	Remarks
Working temperature range *1		Chloroprene rubber	CR	-20°C to +80°C	Standard material
		Fluoro rubber	FKM	-20°C to +180°C	Standard material
		Hydrogenated nitrile rubber	HNBR *2	-20°C to +120°C	Standard material

*1: The operable temperature range depends on the operating conditions.

*2: HNBR which can be used for refrigeration oil and refrigerant applications such as HFC-134a is adopted.

*3: No grease is applied to the O-ring of the socket for HNBR seal material products when shipping.

Be sure to apply refrigerating machine oil before use.

Maximum Tightening Torque

Nm {kgf·cm}

Size (Thread)		1/4"	3/8"	1/2"	3/4"
Torque	Brass	9 {92}	12 {122}	30 {306}	50 {510}
	Stainless steel	14 {143}	22 {224}	60 {612}	90 {918}

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Interchangeability

Socket and plug of different sizes cannot be connected.

Interchangeable with SP CUPLA Type A, SP-V CUPLA and SP CUPLA of the same size but take heed of flow rate change.

Minimum Cross-Sectional Area

(mm²)

Model	2S-V-Ax2P-V-A	3S-V-Ax3P-V-A	4S-V-Ax4P-V-A	6S-V-Ax6P-V-A

Seal materials for refrigerants

Various eco-friendly refrigerants for air conditioner and refrigerator have been developed. NITTO KOHKI, having invested years in the research and development of excellent seal materials to withstand refrigerants and refrigerant oils, has made early attempts to develop and manufacture the seal materials for these eco-friendly refrigerants.

Seal material	Hydrogenated nitrile rubber	Chloroprene rubber
Mark	HNBR	CR
Features	Resistant to hydrofluorocarbons (HFC-134a, HFC-407C, HFC-410A, HFC-404A), and PAG type and ester type oils. Also resistant to heat up to 120°C	Excellent resistance to hydrofluorocarbons (HCFC-22 and HFC-134a)
Application	Refrigerator production lines Air conditioner production lines	Air conditioner production lines

How to distinguish from SP CUPLA Type A

The "V" mark is engraved on the flat part of the plug and the flat part of the socket to distinguish from SP CUPLA Type A.

Application Example

Vacuuming

For Inert Gas and Vacuum

PCV PIPE CUPLA

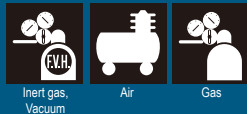

For connection to copper pipes

Working pressure

4.5
4.5 MPa
(46 kgf/cm²)

Valveless

Applicable fluids

Clamps directly on straight copper pipes ! Double seal construction withstands a vacuum of up to 1.3×10^{-1} Pa.

- Clamps directly on to straight copper pipes eliminating unnecessary welding or flaring.
- Withstands a vacuum of up to 1.3×10^{-1} Pa (when connected) making it possible to be used in leak testing, vacuum suction and refrigerant charge.
- Select from three standard types of seal materials to be used with fluids for air conditioner and refrigerator production lines. Many models to suit various pipe sizes.
- One lever operation simultaneously clamps and seals pipe. Double seal construction for tight fit on end and outside surface of pipe ensures excellent sealing and vacuum resistance.

Wide variations of end configurations; 1/4", 3/8" and blind plug

Standard seal materials fluoro rubber (FKM), hydrogenated nitrile rubber (HNBR) and chloroprene rubber (CR) to suit air conditioner and refrigerator production lines

Double seal design for tight fit on both end and outside of pipe

Many models to cover various pipe sizes

One lever operation simultaneously clamps and seals pipe

For exclusive use on straight copper pipes

Clamping Mechanism

Application Example

For Paint

PAINT CUPLA

Piping for painting equipment

Working pressure

Valve structure

Applicable fluid

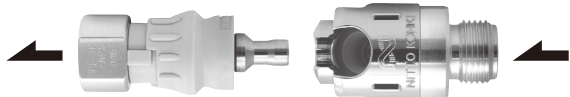

Quick connection and disconnection of paint spray gun and paint fluid line is realized.

- Unique swing connection system enables easy connection and disconnection of paint spray gun and paint hose even by gloved hands.
- Full-open gate valve mechanism prevents paint precipitate buildup.
- Adoption of special resin seal that has resistance against solvents made it possible to feature superior durability, long stable capability, and easy cleaning of paint spray gun after the job.
- Connection and disconnection can be made even if paint sticks to the socket sleeve.
- Small and lightweight design (80 g per set) reduces the weight to be held by hand of operators.
- Built-in sleeve lock mechanism prevents accidental disconnection of CUPLA, ensuring safe operation.
- Wide variety of end configurations (standard thread: G 3/8) are available in response to various paint spray guns.

Flow Direction

Fluid must run from socket to plug.

Specifications

Body material	Socket : Aluminum alloy Plug : Stainless steel

Tightening Torque Range

Nm {kgf·cm}

Torque	15 {153}
--------	----------

Interchangeability

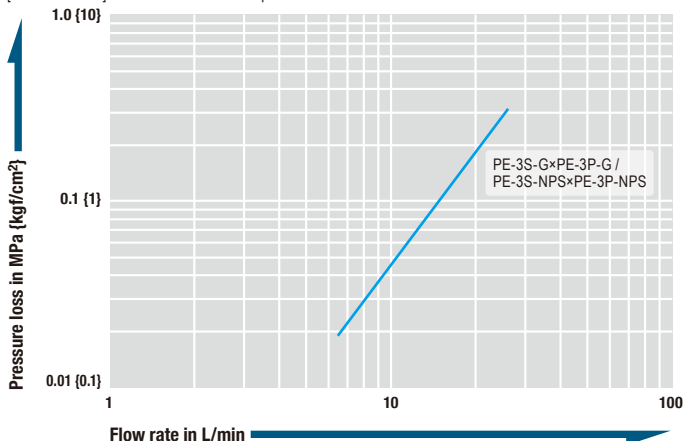

Sockets and plugs can be connected regardless of end configurations.

Suitability for Vacuum

Not suitable for vacuum application in either connected or disconnected condition.

Flow Rate – Pressure Loss Characteristics

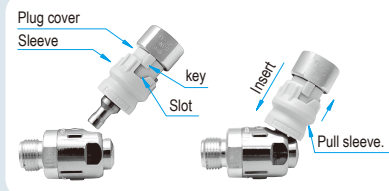

[Test conditions] - Fluid : Water - Temperature : 23°C±5°C

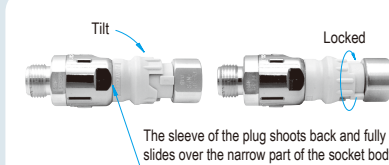

Connection and Disconnection

Connection

Align the key on plug cover to the slot on sleeve, then while pulling the socket sleeve insert the plug to the hilt.

While keeping the plug inserted into the socket, tilt the plug so as to align the plug with the socket. Lock can be made by turning the sleeve.

Disconnection

Disconnect in the reverse order of connection.

Models and Dimensions

Plug PE-3P type (Female thread)

Model	Application (Thread)	Mass (g)	Dimensions (mm)				
			L	øD	øB	H(WAF)	T
PE-3P-G	G 3/8	31	(58)	24	4.5	19	G 3/8
PE-3P-NPS	3/8 NPS	31	(58)	24	4.5	19	3/8 NPS

For Food

HYGIENIC CUPLA

Easy Wash Type

Disassemble and wash type / For food manufacturing piping

Working pressure	Valve structure	Applicable fluids				
1.0						
1.0 MPa (10 kgf/cm ²)	Straight through	Food, Drinking water	Water	Powder	Air	

Solves the troubles of ferrule joints by the effortless operation unique to CUPLA. Easy disassembly and cleanability help in hygienic management of HACCP.

- It can be connected by just inserting the plug to the socket and twisting the "Safety lock".
- The "Safety lock" feature ensures that there can be no unintentional disconnection of the coupling.
- O-rings that conforms to the Food sanitation Act of Japan is adopted.
- An operator friendly design. Seal parts will not drop off during connection like conventional fittings.
- Stainless steel (JIS SUS316L equivalent) for the liquid contact parts, and finished with buffing (#400).

Smart Connect and Disconnect

Ferrule type

(ISO 2852 standard)

Welding type

(JIS G 3447 standard)

Specifications

Body material	Stainless steel [SCS16 (JIS SUS316L equivalent)] *1			
Surface finish of the liquid-contact part	Buff finish #400			
Size of end configurations	Welding type *2		Ferrule type *3	
	1.5 S / 2.0 S			
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	1.0	10	10	145
Seal material *4 Working temperature range *5	Seal material	Mark	Working temperature range	Remarks
	Silicone rubber	SI	0°C to +110°C	Standard material
	Fluoro rubber	FKM	0°C to +180°C	Available on request
	Ethylene-propylene rubber	EPDM	0°C to +150°C	Available on request
O-ring size	1.5 S: P38, 2.0 S: P50 (Dimensions, tolerance: refer to JIS B 2401, Hardness: A70±5)			

*1: All metal parts are equivalent to SUS304 except those exposed to liquid contact.

*2: The dimensions of the weld zone conform to JIS G 3447 stainless steel sanitary pipe.

*3: Please use ferrule couplings conforming to IDF / ISO 2852.

*4: The seal material conforms to article No.3-D-3-(1) Rubber utensils (except nursing utensils) or Containers / Packages. It has passed both material and elution tests specified in the Food sanitation Act and the standards for Food and Food additives (Notice No.370 of 1959 issued by the Ministry of Health and Welfare of Japan). Conforms to standard No.21CFR 177.2600 of the US Food and Drug Administration (FDA).

*5: The operable temperature range depends on the operating conditions.

Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

Interchangeability

Sockets and plugs can be connected regardless of end configurations if the size is same.

Suitability for Vacuum

Vacuum pressure: 53 kPa A

Socket only	Plug only	When connected
—	—	Operational

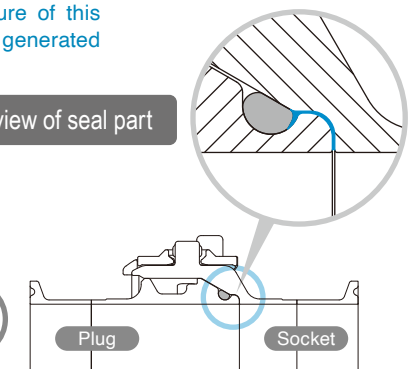

Vacuum performance may vary depending upon working environment and usage conditions.

Seal part (cross section)

Because of the structure of this product, dead space is generated when using.

Enlarged view of seal part

Plug / Socket
Connected state

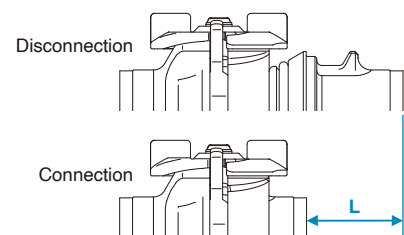

When installing on the pipe

Connection and disconnection of socket and plug is enabled by sliding either the socket or plug to the central axis of pipe. When installing on the pipe, ensure that there is at least minimum moving distance (L) in the axial direction.

Amount of sliding (L)

More than 40 mm

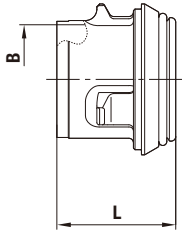

HACCP: Hazard Analysis and Critical Control Point

HACCP is the management system in which food safety is addressed to the process from production, procurement and handling of raw materials to distribution and consumption of finished products through the analysis and control of biological, chemical and physical hazards.

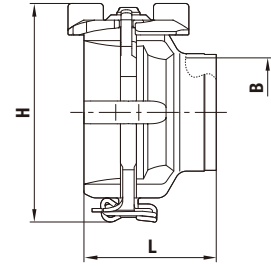

Models and Dimensions

Plug Welding type

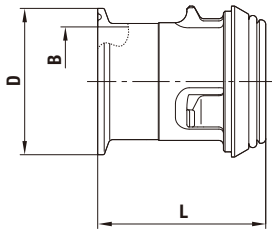

Model	Mass (g)	Dimensions (mm)

SEW-2.0S-FR	526	(79.5)	64	(96)	47.8

* A type without seal material is also available. In such case, the model name ends with "-NP". (ex: SEW-2.0P-BW **-NP**)

Applications

Easy assembly and disassembly

No tools are required to disassemble / assemble HYGIENIC CUPLA. Small number of parts that are easy to handle, aiding efficient maintenance.

Easy washing of the whole unit

After disassembly, small number of components requires minimum effort when cleaning. No small parts to lose.

Safety Lock function

As a safety measure, the "Safety lock" feature ensures that there can be no unintentional disconnection. By turning the cam handle, you can maintain the connected state of the socket and plug.

Construction and Safety standards

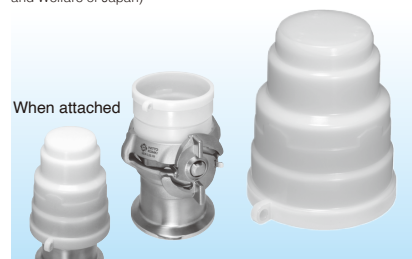

Since the O-Ring is attached beforehand, it will not drop off during connection like conventional fittings. And the seal material conforms to article No. 3-D-3-(1) Rubber utensils (except nursing utensils) or Containers / Packages. It has passed both material and elution tests specified in the Food sanitation Act and the standards for Food and Food additives (Notice No.370 of 1959 issued by the Ministry of Health and Welfare of Japan). Also conforms to standard No. 21 CFR 177.2600 of the US Food and Drug Administration (FDA).

Accessory

DUST CAP Dust cap for both plug and socket (made of polyethylene).

Prevents contamination of foreign matter into piping during separation.

The Dust Cap conforms to No. 3-D-2-(1) and 3-D-2-(2)-4 Apparatus and Containers / Packages. It has passed both material and elution tests specified in the standards for Food and Food additives. (Notice No.201 of revised March 31, 2006 by the Ministry of Health and Welfare of Japan)

See page 164 for the details.

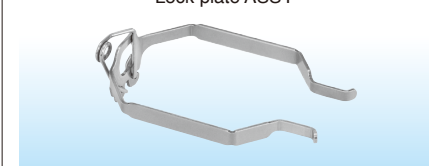

Consumables

The O-ring and Lock plate ASSY are consumable items. See the following list as a replacement guide for the Lock plate ASSY.

Replacement guide

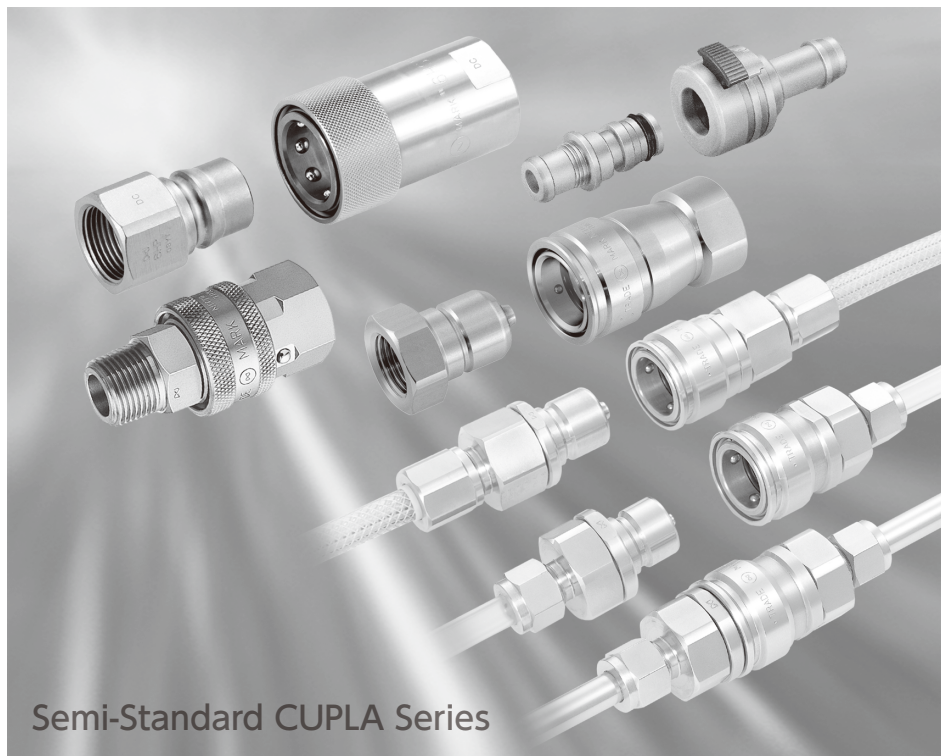

Replacement parts	Connection and disconnection times
Lock plate ASSY	1000 times

Lock plate ASSY

- When the Lock plate ASSY is deformed, replace it with a new one regardless of connection / disconnection times.
- The durability of the O-ring differs depending on the operating environment and conditions (pressure and temperature etc.).

Index

Semi-Standard CUPLA Series

[illegible]

CUPLA with Single Lock

CUPLA with Safety Lock

Separation prevention mechanism

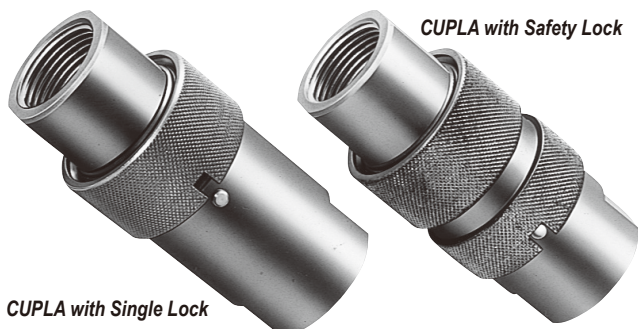

The standard CUPLA series listed on the lower right can have an additional single lock or a safety lock mechanism to prevent accidental disconnection.

- **CUPLA with Single Lock**

The sleeve is provided with a cutout and the body of the socket has a projecting lock pin or ball. After connecting CUPLA, simply turn the sleeve to lock the back and forth movement of the sleeve.

- **CUPLA with Safety Lock**

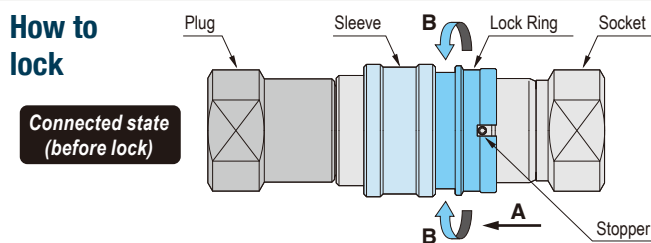

A sleeve stopper Lock Ring is provided behind the sleeve. After connecting CUPLA, simply turning the Lock Ring to disable the back and forth movement of the sleeve (see diagram sketch on the right top).

CUPLA with Single Lock

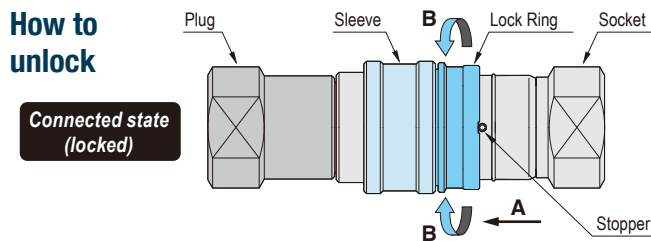

How to operate the Separation prevention mechanism (Safety lock)

How to lock

Slide the Lock Ring in the direction of the arrow A and rotate it in either direction simultaneously. When the Stopper is aligned with the shallow cutout on the Lock Ring, it will be locked.

How to unlock

Slide the Lock Ring in the direction of the arrow A and rotate it in either direction simultaneously. When the Stopper is aligned with the deeper cutout on the Lock Ring, it will be unlocked.

CUPLA with Single Lock

HI CUPLA (Brass) / MOLD CUPLA / SP CUPLA Type A / TSP CUPLA / HSP CUPLA / 210 CUPLA
 *The above all with single lock are made-to-order.

The following CUPLA comes with single lock as standard feature.

HI CUPLA BL / LOCK CUPLA 200 / HSU CUPLA / 350 CUPLA / FLATFACE CUPLA F35 / FLATFACE CUPLA FF / 450B CUPLA

CUPLA with Safety Lock

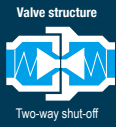

SP CUPLA Type A / TSP CUPLA / HSP CUPLA / 210 CUPLA / 350 CUPLA
 *The above all with safety lock are made-to-order.

The following CUPLA comes with safety lock as standard feature. HOT WATER CUPLA / S210 CUPLA

HSP-DC CUPLA

For high pressure / For hydraulic pressure up to 20.6 MPa {210 kgf/cm²}

Working pressure
20.6
20.6 MPa
(210 kgf/cm²)

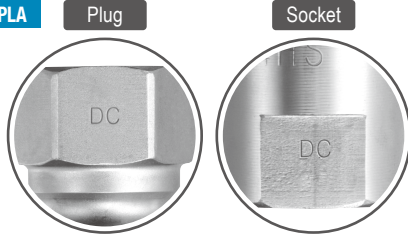

For various applications with large pressure fluctuations.

- "Electroless nickel phosphor plating" which is not soluble to fire-resistant "water glycol type hydraulic fluid" is entirely adopted.
- Valve material with high impact resistance. Available for die casting machines with large pressure fluctuations.
- Various thread sizes available.

How to distinguish from HSP CUPLA

The "DC" mark is engraved on the flat part of the plug and the flat part of the socket to distinguish from HSP CUPLA.

Application examples

Die-casting machines, Various casting machines, Continuous casting machines, Pipe casting machines, Machine tools, Rolling mills, Molding presses, Forging presses, Powder alloy presses, Blast furnaces, Electric furnaces, Furnace switchgear, Injection molding machines, Adaptable to connections of hydraulic piping such as glass forming equipment, etc.

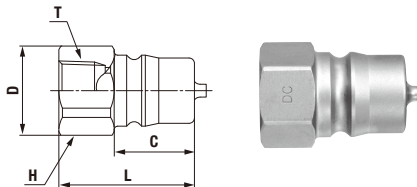

Admixture of Air on Connection May vary depending upon the usage conditions. (mL)

Model	2HS-DC × 2HP-DC	3HS-DC × 3HP-DC	4HS-DC × 4HP-DC	6HS-DC × 6HP-DC	66HS-DC × 66HP-DC	8HS-DC × 8HP-DC
Volume of air	0.7	1.9	3.5	3.5	8.2	12.4

Models and Dimensions (4HSP with 6HSP can be connected with each other whereas 6HSP with 66HSP cannot be connected.)

WAF : WAF stands for width across flats.

Plug HP type (Female thread)

Model	Application	Mass (g)	Dimensions (mm)

HI FLOW CUPLA

For Medium Pressure

Working pressure

1.0 MPa
{10 kgf/cm²}

Valve structure

Two-way shut-off

Applicable fluids

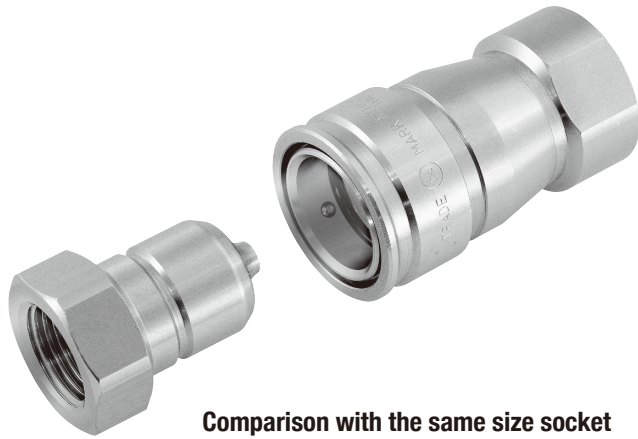

Water

Temperature control refrigerant

Drastically increases flow volume while minimizing pressure drop.

- Both socket and plug have built-in automatic shut-off valves.
 - High flow rate type to increase cooling effect.
 - Quick connection and disconnection of cooling pipes.
 - Compact and space-saving design.
- Compared with the coupled length of SP CUPLA type A, that of HI FLOW CUPLA is reduced by 22%.
- Installation and maintenance can be done within a short time.

Comparison with the same size socket

HI FLOW CUPLA BI Type

CUPLA with bite type tube fitting for piping water and fluids for temperature control

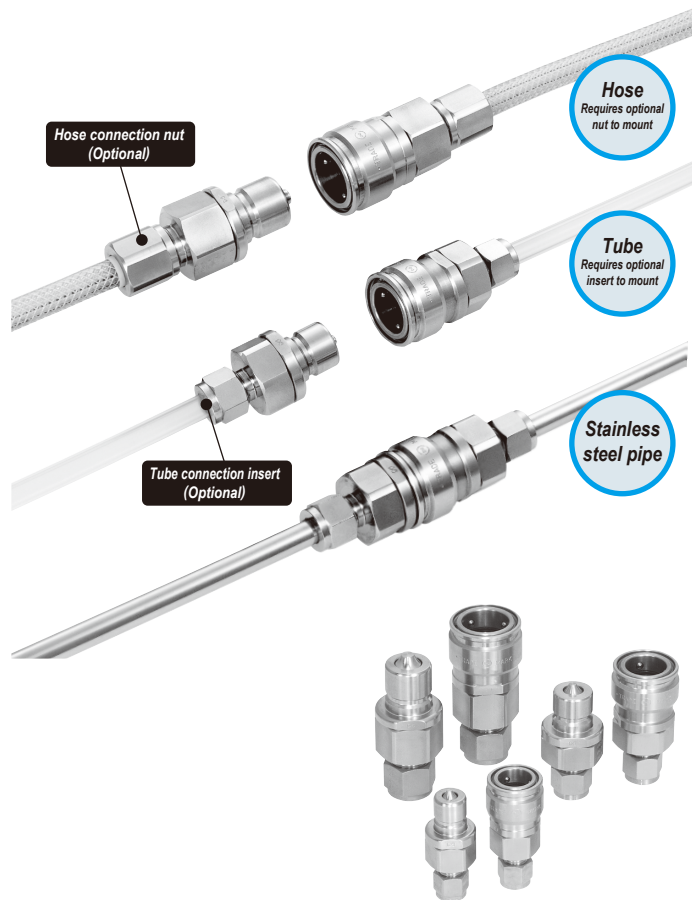

Working pressure
1.0
1.0 MPa
(10 kgf/cm²)

Valve structure

Two-way shut-off

Applicable fluids

Water
Temperature control refrigerant

HI FLOW CUPLA and bite type tube fitting are combined to achieve efficient piping.

- Easy connection with stainless steel pipe.
- Connection to plastic hose is possible with optional hose connection kit.
- Connection to various tubes is also possible via the use of appropriate optional inserts.

Specifications

Body material	Stainless steel			
Applicable pipe size	1/4", 3/8", 1/2" (See the below list for hose and tube size.)

SP CUPLA Type A PV Type

For Medium Pressure / Connectable with residual pressure with Purge Valve

Working pressure

2.0 to 4.5
2.0 to 4.5 MPa
(20 to 46 kgf/cm²)

Valve structure

Two-way shut-off

Applicable fluids

Water

Hydraulic oil

Equipped with residual pressure eliminating valve (up to 1 MPa).

- Automatic shut-off valves in both socket and plug prevent fluid spill out on disconnection.
- Smooth connection even when there is residual pressure when connecting.
- No residual pressure eliminating operation required on your piping. Just connect to purge the remaining pressure.

The small purge valve is pressed and completes the connection by releasing the residual pressure.

Suitability for Vacuum

1.3×10⁻¹ Pa (1×10⁻³ mmHg)

Socket only	Plug only	When connected
—	—	Operational

Safety Guide: This product can be connected under residual pressure, but do not connect under dynamic pressure applied. It may lead to incomplete connection, deteriorated durability or possible valve fly out. Read without fail and observe the "Instruction sheet" that comes with the product and the following pages in the general Quick Connect Coupling Catalog; [Precautions Relating to the Use of All CUPLA] and "CUPLA for Low Pressure (Water, Liquid) and for Medium Pressure" in the [Safety Guide] page.

Specifications

TSP-HP CUPLA for High Pressure

For high pressure and general purposes

Working pressure
9.0
9.0 MPa
(92 kgf/cm²)

Valve structure

Straight through

Applicable fluids

Water Hydraulic oil

- Good for high pressure water piping such as in high pressure washers, or car washers.
- Valveless type ensures high flow rate.

Specifications

Body material	Stainless steel			
Size (Thread)	1/4", 3/8", 1/2"			
Pressure unit	MPa	kgf/cm ²	bar	PSI
Working pressure	9.0	92	90	1310
Seal material	Seal material	Mark	Working temperature range	Remarks
Working temperature range *1	Nitrile rubber	NBR	-20°C to +80°C	Made-to-order item
	Ethylene-propylene rubber	EPDM	-40°C to +150°C	

*1: The operable temperature range depends on the operating conditions.

PLASTIC CUPLA BC Type Valveless

For low pressure air piping

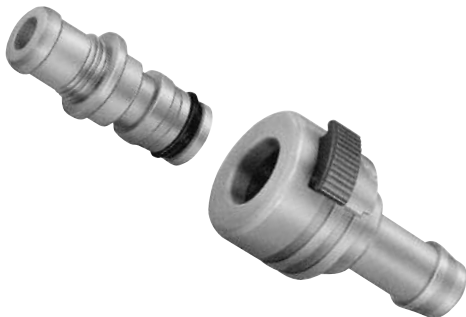

Working pressure
0.07
0.07 MPa
(0.7 kgf/cm²)

Valve structure

Straight through

Applicable fluid

Air

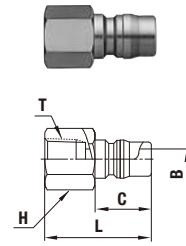

- To connect, just push the plug into the socket.
- Plastic makes this ideal for use in environment prone to rusting.
- Compact and light weight for easy handling.
- Valveless construction gives more stable flow.

DIP MOLD DUST CAP

Dust caps for HI CUPLA, SP CUPLA Type A, TSP CUPLA, and HYDRAULIC CUPLA

- PVC Dust Caps produced by dip molding are available for HI CUPLA, SP CUPLA Type A, TSP CUPLA, and HYDRAULIC CUPLA. Dust Caps prevent dust from getting inside the fluid line and protects the sealability and life of the O-ring.

Caution: The function of the cap may be damaged due to fluid adhering to CUPLA or due to the external environment. Wipe off the fluid from CUPLA to prevent the fluid from adhering.

Size-adjustable Ring for Dip Mold Cap

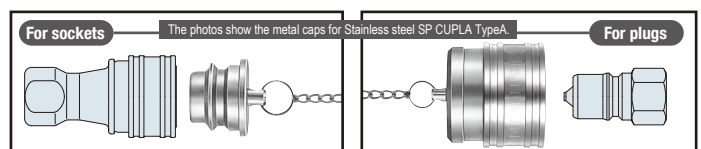

SAFETY CAP

Metal caps for HI CUPLA Series, SP CUPLA Type A, TSP CUPLA and HYDRAULIC CUPLA

(Semi-standard)

- Metal Cap equipped with dust-proof and leak prevention function.
- Caps with metal material corresponding to that of CUPLA body are available.

Model	Applicable CUPLA	Sales unit
Model name of Safety Cap is stated in the following manner. Model= CUPLA Model (normal CUPLA) + SD (safety cap)	Sockets and plugs for HI CUPLA, SP CUPLA Type A, TSP CUPLA, HSP CUPLA, 210 CUPLA, S210 CUPLA, 450B CUPLA and SP-V CUPLA Type A	1 pc.

DUST CAP

DUST CAP Plastic Cap for HI CUPLA Series and FULL BLOW CUPLA

- Dust caps prevent dust from getting inside CUPLA.

*The 20S-D cannot be used together with the SLEEVE COVER.

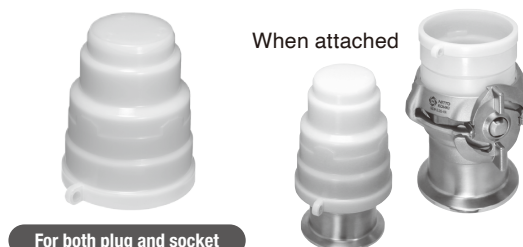

Part number	Model	Applicable CUPLA	Sales unit	Material
CQ12434	20S-D	Sockets for 20/30/40 type HI CUPLA Series <small>Note: Dust caps cannot be attached to the sockets for FULL BLOW CUPLA, 400/600/800 type of HI CUPLA and HI CUPLA ACE.</small>	1	Polyvinyl chloride (PVC)
CQ30978	FBH-D	FULL BLOW CUPLA	1	Polyvinyl chloride (PVC)

DUST CAP

Dedicated polyethylene cap for HYGIENIC CUPLA

- Dust cap for both plug and socket (made of polyethylene).

The Dust Cap conforms to No. 3-D-2-(1) and 3-D-2-(2)-4 Apparatus and Containers/Packages. It has passed both material and elution tests specified in the standards for Food and Food additives. (Notice No.201 of revised March 31, 2006 by the Ministry of Health and Welfare of Japan)

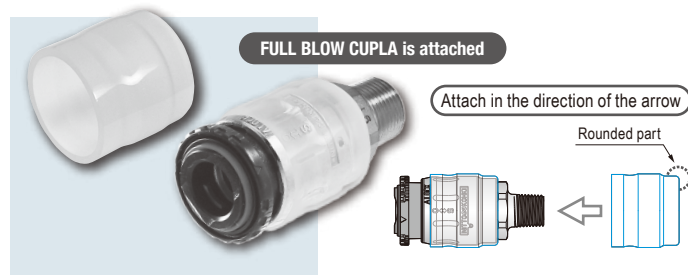

Model	Size	Applicable CUPLA	Sales unit	Material
SEW-1.5SP-D	1.5S	For HYGIENIC CUPLA Plug and Socket	1	Polyvinyl chloride (HDPE)
SEW-2.0SP-D	2.0S		1	

SLEEVE COVER

Plastic cover for FULL BLOW CUPLA

- Easier sliding operation is achieved by attaching an additional plastic cover over the socket sleeve of FULL BLOW CUPLA.
- Plastic covers reduce the risk of damage if CUPLA strikes other components or products.

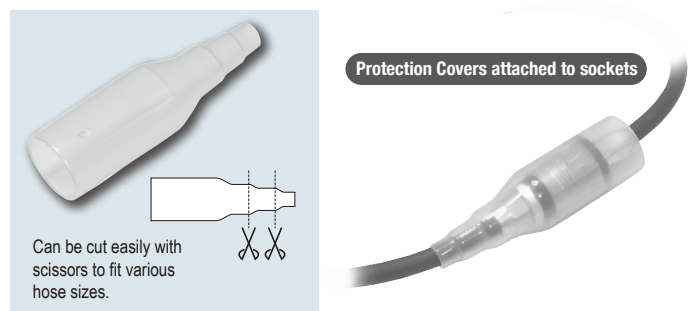

Model	Color	Applicable CUPLA	Sales unit	Material
SLEEVE COVER SLC-FBH	Semitransparent	FULL BLOW CUPLA	1	Polyvinyl chloride (PVC)

PROTECTION COVER

Plastic Cover for NUT CUPLA and FULL BLOW CUPLA Nut Type (Semitransparent)

- Protection cover wraps up whole CUPLA to absorb impacts and to reduce the risk of damage if CUPLA accidentally strikes other components or products.
- Protection covers can be cut to fit the hose diameter of the hose.
- Can be attached to either the socket or the plug, and can be used as a dust cap.

Part number	Model	Applicable CUPLA	Sales unit	Material
CB23784	SOC-HI	Can be attached to NUT CUPLA socket or plug (SN type & PN type) and FULL BLOW CUPLA (SN Type).	1	Polyvinyl chloride (PVC)

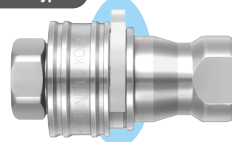

SLEEVE STOPPER

Sleeve Stopper for SP CUPLA Type A and SP-V CUPLA Type A

- Sleeve stopper exclusively for SP CUPLA Type A and SP-V CUPLA Type A sockets. Attaching the sleeve stopper after connection of socket and plug locks the sleeve of the socket and prevents unexpected disconnection.

	Part number	Stopper for SP CUPLA Type A socket	Applicable CUPLA	Sales unit	Material		Part number	Stopper for SP CUPLA Type A socket	Applicable CUPLA	Sales unit	Material
Socket	CB24350	For 1S	SP CUPLA Type A, SP-V CUPLA Type A and SP CUPLA Type A PV Type sockets	10	Engineering plastics (POM)	Socket	CB26456	For 10S	SP CUPLA Type A, SP CUPLA Type A PV Type sockets	1	SUS 304

ACCESSORIES FOR O-RING MAINTENANCE

Jigs & grease for replacement of O-rings for couplings
For SP CUPLA Type A, TSP CUPLA, HOT WATER CUPLA, ZEROSPILL CUPLA,
HSP CUPLA, HSU CUPLA and HYGIENIC CUPLA

- The seal materials play an important role in maintaining the performance of a coupling. O-rings or seal materials of these CUPLA series are designed to be replaceable. Please be certain to choose the correct and genuine Nitto kohki O-ring in order to maintain the performance of couplings.

Jig for O-ring replacement

- Model: **PMJ-1 (Small)**
(Part.No.CB23687)
• Sales unit: 1 pc.

PMJ-1 (Small)

- Model: **PMJ-2 (Large)**
(Part.No.CB23688)
• Sales unit: 1 pc.

PMJ-2 (Large)

5 mL container
Grease for CUPLA

- **GRE-HC1** (Hydrocarbon grease) for NBR, FKM O-ring or packing (Part.No.CB28531)
• Sales unit: 1 pc.

5 mL container

Grease for CUPLA

- **GRE-M1** (Mineral grease) for NBR, FKM O-ring or packing (Part.No.CB23701)
• Sales unit: 1 pc.

5 mL container

Grease for CUPLA

- **GRE-S1** (Silicone grease) for NBR, FKM, and EPDM O-ring or packing (Part.No.CB23702)
• Sales unit: 1 pc.

5 mL container

Grease for CUPLA

- **GRE-S2** (Silicone grease) for NBR, FKM, and EPDM O-ring or packing (Part.No.CB28791)
• Sales unit: 1 pc.
(NSF H1, NSF 61 registered product)
Standardly applied to CUBE CUPLA

5 mL container

Grease for CUPLA

- **GRE-S3** (Silicone grease) for NBR, FKM, and EPDM O-ring or packing (Part.No.CB66292)
• Sales unit: 1 pc.
Standardly applied to FLOW MONITOR

RESIDUAL PRESSURE RELEASE JIG

Residual Pressure Release Metal Jig for SP CUPLA Type A and HYDRAULIC CUPLA (Semi-standard)

- Residual pressure within socket or plug can be released easily by just turning the handle.
- Residual pressure release jigs are available in two types; socket type for use with plugs and plug type for use with sockets.
- Connection to sockets or plugs is the same as connection of normal CUPLA.

The photos show the jigs for HSP CUPLA.

Model	Attachable CUPLA	Sales unit
<p>The model name is to be defined in the following manner.</p> <p>Z N – Type of CUPLA to be attached</p> <p>Residual pressure release jig</p> <p>Example: For CUPLA model 350-3S, the jig name would be ZN-350-3S</p>	Sockets and plugs for SP CUPLA Type A, HSP CUPLA, 210 CUPLA, S210 CUPLA, 280 CUPLA and 350 CUPLA	1 pc.

Caution: Since the upper limit of residual pressure that can be relieved depends on the product, please contact us separately.

CUPLA ADAPTER for Braided Hose Connection

Mounts on CUPLA plug / socket with female thread

- Adapter for CUPLA with female thread such as ZEROSPILL CUPLA and SP CUPLA Type A.
 - No hose clamp is required resulting in reduced risk of injuries to fingers or palms.
 - Deterioration of the braided hose at the hose barb part has been eliminated.
 - Unique nut construction increases the pulling load of braided hoses.
 - Simply push a braided hose onto the hose barb to the end and tighten the nut until it is flush against the hose barb base.
 - No inner parts for conventional braided hose fittings are required.
- Thus incorrect assembling does not occur.

A tool and a hose clamp are not required.

Not Required

Please use braided hoses available in the market.

Specifications

Body material	Brass			
Model	BH90-3M	BH120-4M	BH150-4M	BH190-6M
Size (Thread)	3/8"	1/2"	1/2"	3/4"
Braided hose size	ø9×ø15 mm	ø12×ø18 mm	ø15×ø22 mm	ø19×ø26 mm
Working pressure *1	Depends upon the specifications of braided hoses to be used.			
Working temperature range *1	Depends upon the specifications of braided hoses to be used.			
Applicable fluids *2	Air, Water, Oil			

Maximum Tightening Torque

Nm {kgf·cm}

Model	BH90-3M	BH120-4M	BH150-4M	BH190-6M
Torque (Taper Pipe Threads) *3,4	12 {122}	30 {306}	30 {306}	50 {510}

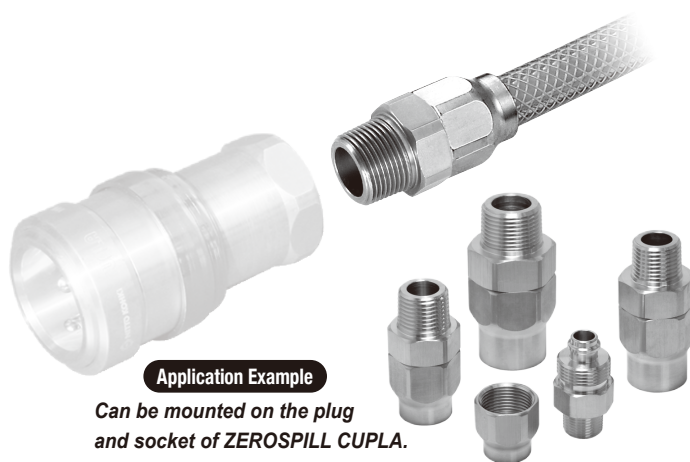

*1: Max working pressure and working temperature depend upon the specifications of braided hoses to be used.

*2: Use within the specification of the seal material and the braided hose to be used.

*3: Stress corrosion crack may happen if they are used under corrosive environment. Take note of usage conditions.

*4: Tighten the nut until it is flush against the hose barb base after pushing a braided hose to the end.

- Braided hoses should be made of soft PVC and woven by reinforcement thread.

Application Example

Can be mounted on the plug and socket of ZEROSPILL CUPLA.

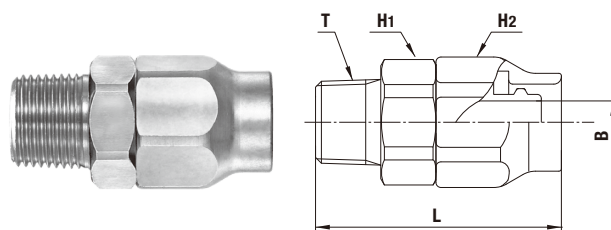

Benefits without a hose clamp

Two piece design

Models and Dimensions

WAF : WAF stands for width across flats.

BH-M type (Male thread)

Model	Application (Hose) (mm)	Hose wall thickness (mm)	Mass (g)	Dimensions (mm)				
				L	H1 (WAF)	H2 (WAF)	T	øB
BH90-3M	ø9×ø15	3±0.3	106	(49)	Hex.23	Hex.24	R 3/8	8.5
BH120-4M	ø12×ø18	3±0.3	159	(59)	Hex.27	Hex.27	R 1/2	11
BH150-4M	ø15×ø22	3.5±0.35	210	(67)	Hex.30	Hex.30	R 1/2	13
BH190-6M	ø19×ø26	3.5±0.35	301	(74)	Hex.35	Hex.35	R 3/4	17

FLOW MONITOR

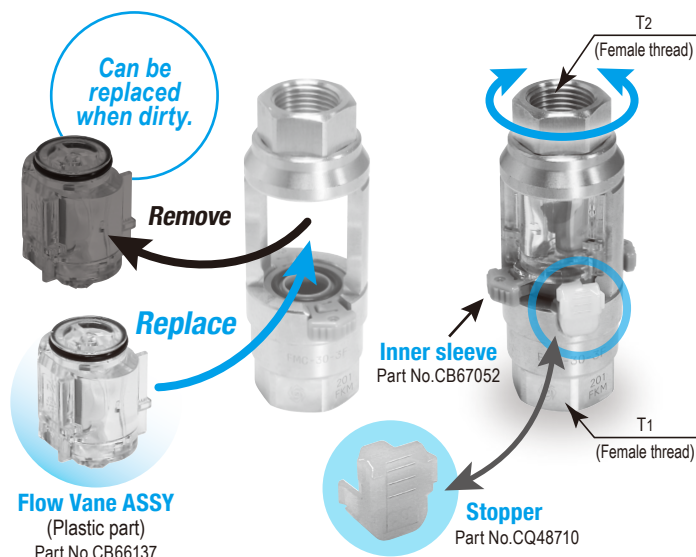

NEW

Replaceable Flow Vane type

For low pressure / For checking the water flow of mold cooling water pipes

- Fluid flow from low flow rate (2 L/min) water pipes can be visually checked with the rotating two-colored impeller.
- Flow Vane ASSY can be replaced without removing it from the piping.
- The stopper prevents unintended removal of the plastic parts.
- Installation and replacement is easy since the screw part of the T2 side rotates freely to the left and right.

* This product cannot be used for gases. If oil is used for the fluid, the durability may be reduced depending on the compatibility of the oil or additive with the plastic parts.

Check the flow with the rotating two-colored impeller.

Recommended replacement time of Flow Vane ASSY

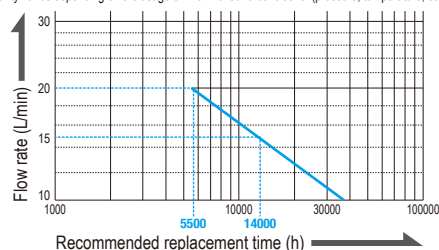

Flow Vane ASSY

If the Flow Vane ASSY is dirty or cloudy and the impeller is difficult to see, replace it regardless of the recommended replacement time.

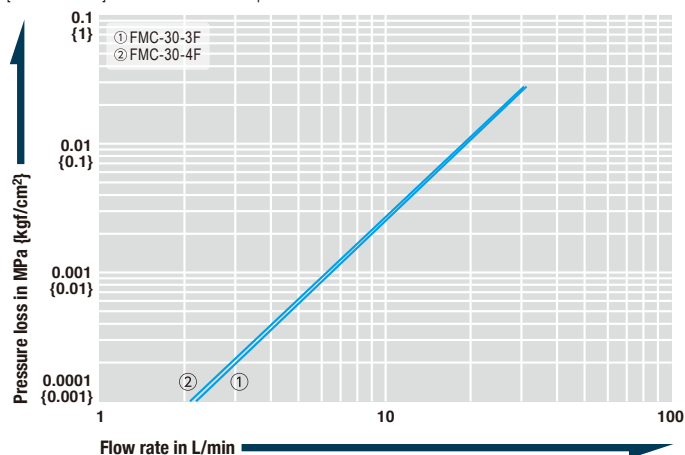

The recommended replacement time for this product is calculated from the amount of wear on the internal parts of the Flow Vane ASSY based on long-term flow durability tests. Refer to the table below for the recommended replacement time.

* The durability varies depending on the usage environment and conditions. (pressure, temperature, etc.)

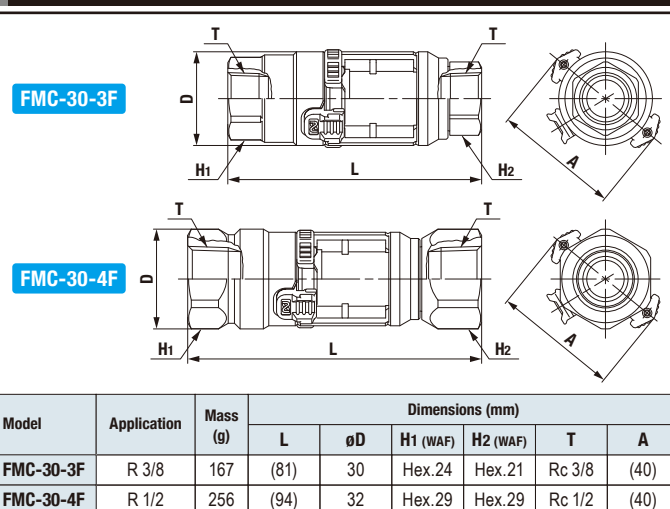

Flow Rate – Pressure Loss Characteristics

[Test conditions] - Fluid : Water - Temperature : 23°C

Models and Dimensions

WAF : WAF stands for width across flats.

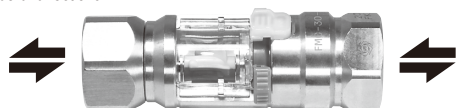

Specifications					
Model		FMC-30-3F		FMC-30-4F	
Size (Thread)		Rc 3/8		Rc 1/2	
Body material		Brass			
Flow Vane ASSY material (Plastic part)	Outer cylinder	Polycarbonate			
	Impeller	Polypropylene			
	Inner sleeve, Stopper	Polyamide			
Pressure unit		MPa	kgf/cm ²	bar	PSI
Working pressure		1.0	10	10	145
Working flow range		L/min	2 to 20		
Seal material		Seal material		Mark	Working temperature range
Working temperature range *1		Fluoro rubber		FKM	+10°C to +80°C

*1: The operable temperature range depends on the operating conditions.

Maximum Tightening Torque		Nm {kgf·cm}
Size (Thread)	Rc 3/8	Rc 1/2
Torque	12 {122}	30 {306}

Flow Direction

Fluid flow can be bi-directional.

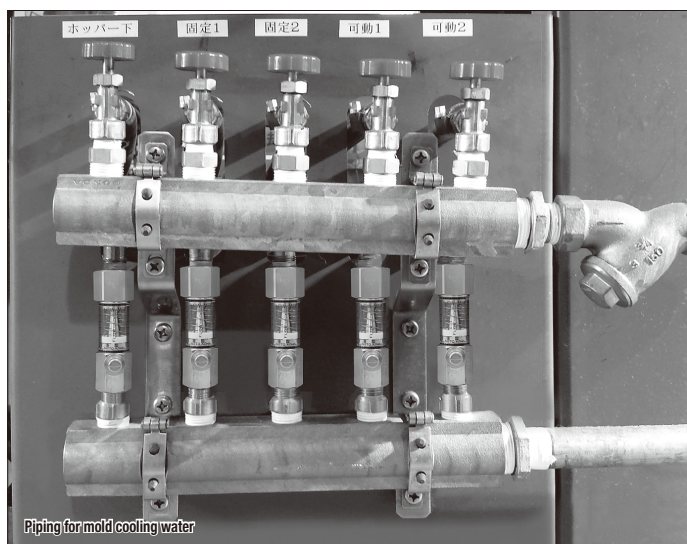

FLOW METER

For low pressure / Flow meter with special valve for mold cooling lines

- Graduated scale shows the coolant flow rate numerically, thus reducing operator variation in setting cooling conditions.
- Although small, it has a built-in flow rate adjustment valve, allowing the molding conditions of each machine to be set freely.
- Molding conditions are reproducible and lead time can be shortened.
- Installation and replacement is easy since the screw part of the T2 side rotates freely to the left and right.

Note: Plastic part (Scale tube) cannot be replaced

Specifications

Body material	Brass			
Graduated tube (Scale tube)	Polycarbonate			
Size (Thread)	Both ends Rc 3/8 female thread			
Pressure unit	MPa	kgf/cm ²	bar	PSI

PAD-6FM / PAD-8FM For thread connection

Technical drawing of a PAD-6FM / PAD-8FM component. The drawing shows two views: a front view (left) and a side view (right). The front view shows a hexagonal base with a central circular feature and a drain outlet port. The side view shows the component's profile with various dimensions labeled. The dimensions are as follows:

- L1**: Total length of the component.
- L2**: Distance from the front face to the center of the drain outlet port.
- B**: Width of the component at the drain outlet port.
- P1**: Distance from the front face to the center of the main port.
- P2**: Distance from the front face to the center of the side port.
- H**: Height of the component.
- T1**: Thickness of the component at the front face.
- T2**: Thickness of the component at the side port.
- D**: Diameter of the main port.
- Rc 1/8**: Thread specification for the drain outlet port.

CUPLA CONNECTING JIG

Connecting Jig for large CUPLA

- Smooth and easy connection of large CUPLA by operating a lever.

The photo shows
SP CUPLA Type A / 16SP-A (Rc2)

Specifications

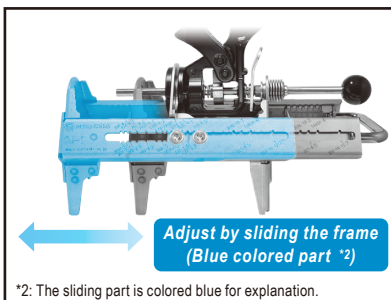

Model	CJ-1
Body material	Stainless steel (SUS430), Aluminum alloy
Applicable CUPLA	See list on the right
Connection under residue pressure	Not possible
Working temperature	Normal temperature
Storage Temperature Range	-20°C to +60°C
Mass	1.85 kg
Accessories	4 mm Hexagon wrench, Operation procedure tag, Cable tie

This is a product that assists connection of CUPLA. If an excessive load is applied during connection, such as when the O-ring is insufficiently lubricated, when the O-ring is hardened in a low temperature environment, or when CUPLA is under dynamic pressure or residual pressure, the safety device activates and will not connect. Be sure to check with the actual product before use.

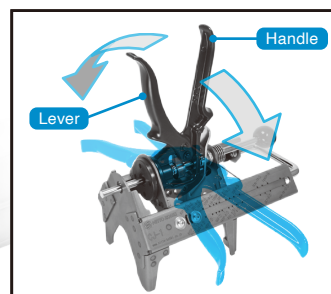

Versatile

Corresponds to all applicable models*1 by adjusting the body length.

*1: Standard CUPLA appearing in the CUPLA general catalog (two-way shut-off valve). Except MULTI CUPLA series. See below list of applicable models.

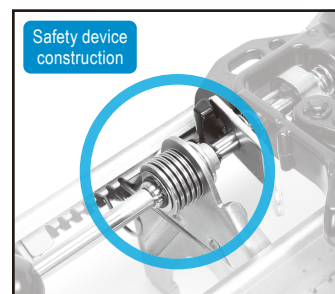

*2: The sliding part is colored blue for explanation.

Functional

The Handle can be used at any angle to prevent interference with CUPLA.

Safe

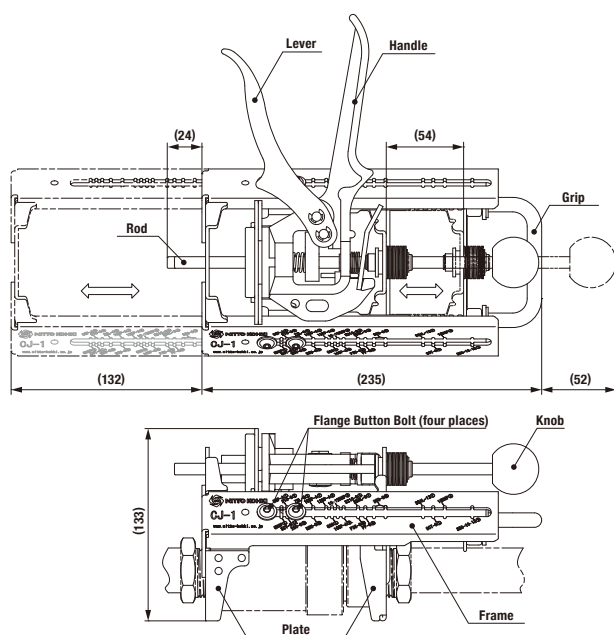

If excessive force occurs during connection, the safety device prevents damage to the body. When the safety device is activated, the connection of CUPLA is disabled.

List of Applicable Models

Applicable models	Size (Thread)			
	Rc 1	Rc 1 1/4	Rc 1 1/2	Rc 2
SP CUPLA Type A	8SP-A	10SP-A	12SP-A	16SP-A
ZEROSPILL CUPLA	ZEL-8SP	—	—	—
HSP CUPLA	8HSP	10HSP	12HSP	16HSP
210 CUPLA	210-8SP	—	—	—
HSU CUPLA	HSU-8SP	—	—	—

FLATFACE CUPLA FF	FF-8SP	—	—	—
SEMICON CUPLA SP Type	8SP-304	—	—	—
SEMICON CUPLA SCS Type	SCS-8P	—	—	—
SEMICON CUPLA SCY Type	SCY-8S	—	—	—
SEMICON CUPLA SCT Type	SCT-8SP	—	—	—
SEMICON CUPLA SCAL Type	SCAL-8SP	—	SCAL-12SP	—

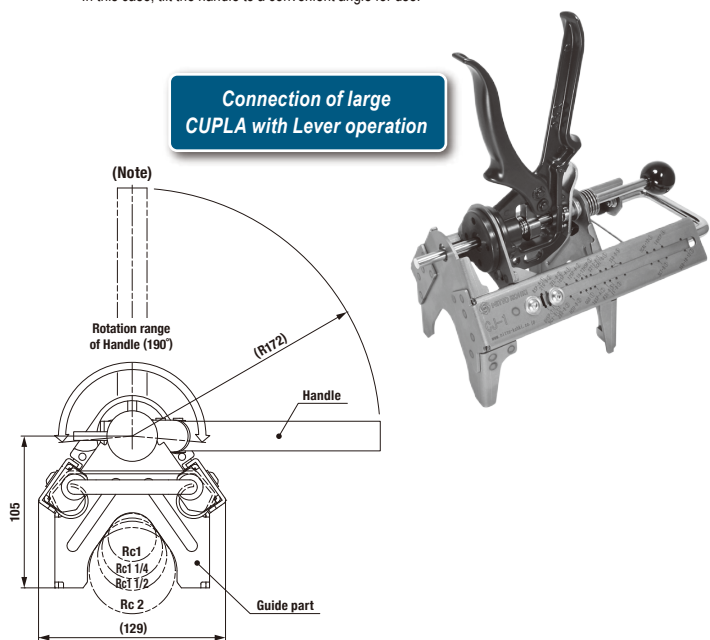

Models and Dimensions

Model: CJ-1

* To prevent injuries, it is recommended to wear gloves during use.

(Note) When the Handle is perpendicular to the body, it may interfere with CUPLA and will not be able to be used. In this case, tilt the handle to a convenient angle for use.

(mm)

Seal Material Selection Table for Reference

For seal parts in CUPLA (the important parts that prevent leaking to the outside), it is important to select the most appropriate seal material to suit the property and temperature of the fluid. It is so important that wrong selection may not only impair the function of CUPLA but also cause an unexpected accident.

When the fluid in question is not listed in "Seal Material Selection Table (For reference)," the seal material that you select should be tested under actual environment. Even if the fluid is stated in the following list, the test could be required in some cases.

	Fluids	Seal Material						
		Nitrile rubber	Hydrogenated nitrile rubber	Ethylene-propylene rubber	Fluoro rubber	Perfluoro-elastomer	Silicone rubber	Chloroprene rubber
2	2,2-Dimethyl-butane	○	○	×	○	○	×	△

Seal Material Selection Table for Reference

How to read the selection tables

- Practically no harm, and can be used (Excellent)
- Some harm may be inevitable but can be used under restrictions (Good)
- △ Should be avoided if at all possible (Not recommended)
- × Should not be used (Unsuitable)

Note: Contact us when the space is blank.

Note: When selecting the seal material, please consider the following suggestions carefully:

1. If there is no comment in the column of the fluid name, the condition of the fluid is under saturation at room temperature.
2. Please check with us for applications at a high fluid temperature or with different fluid concentrations.
3. For applications related to foods, please order separately specifying the detailed applications.

Body Material Selection Table

The selection of appropriate body material for CUPLA is closely related to its usage application, the type of fluid run through, its concentration (%), the pressure, its working environment, etc. So the material must be carefully considered in order to use CUPLA efficiently and obtain its full performance. Since there are some body materials that should not be used with certain fluids, please refer to this table when making your selection.

Taper Pipe Threads

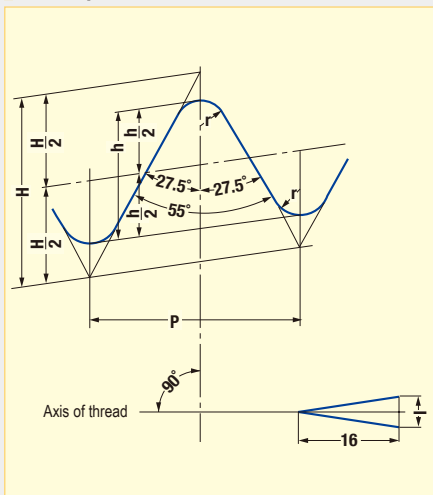

JIS B 0203:1999
ISO 7-1:1994
(BS21)

UDC 621.882.082.2 JIS
Japanese Industrial Standard

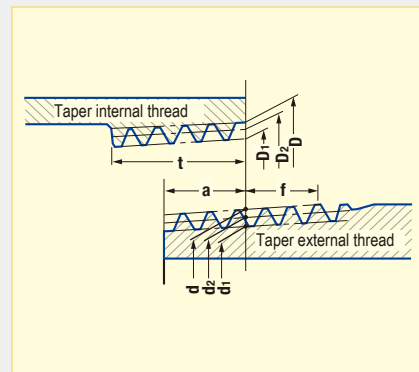

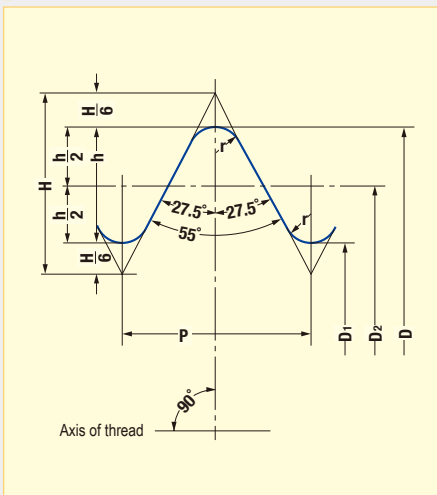

This Japanese Industrial Standard specifies taper pipe threads and is applicable to the threads used mainly for pressure-tight joints on the threads for joining pipes, pipe fittings, fluid machinery, etc.

Attached Table: Basic Profiles, Basic Dimensions and Tolerance

Basic Profile Applied for Taper External and Taper Internal Threads

Basic Profile Applied for Parallel Internal Threads

How to symbolize taper pipe threads:

Taper external thread	R 3/8
Taper internal thread	Rc 3/8

Thick continuous line shows basic profile.

$$P = \frac{25.4}{n}$$

$$H = 0.960237 P$$

$$h = 0.640327 P$$

$$r = 0.137278 P$$

Thick continuous line shows basic profile.

$$P = \frac{25.4}{n}$$

$$H = 0.960491 P$$

$$h = 0.640327 P$$

$$r = 0.137329 P$$

Unit: mm

Designation of thread	Thread				Gauge dia.			Position of gauge plane			Tolerance on D , D_2 and D_1 of parallel internal thread \pm	Length of useful thread (min.)				Size of carbon steel pipe for ordinary piping (Given for reference)		
	Number of threads (in 25.4 mm) n	Pitch P (Given for reference)	Height of thread h	Radius r or r'	External thread			External thread		Internal thread		From position of gauge plane toward larger dia. end f	Internal thread					
					Major dia. d	Pitch dia. d_2	Minor dia. d_1	From pipe end		At pipe end			When there is incomplete thread part	When there is no incomplete thread part				
								Internal thread	Gauge length a	Axial tolerance $\pm b$					Axial tolerance $\pm c$			
																Major dia. D	Pitch dia. D_2	Minor dia. D_1
Outer dia.	Thickness

Production Facilities That Assure Our Product Quality

Large scale production facilities in Tochigi Prefecture, Japan and Ayutthaya, Thailand, having the capability of flexible mass production, are in full operation around the clock and constitute a complete high-grade supply system, from the machining of components to the assembly and testing of finished products, that is forever ready and able to respond to our user's reliance.

Production Facilities Assure Flexible Supply System

TOCHIGI NITTO KOHKI CO., LTD.

Production of CUPLA, Linear-Motor-Driven Piston Pumps and their Applied Products

Tochigi Nitto Kohki factory is accredited under ISO 14001 & 9001.

In November 1995, the Japan Quality Assurance Foundation, authority for inspection and registration, awarded Tochigi Nitto Kohki "ISO 9001" for quality control and quality assurance in the manufacture of CUPLA products (Quick connect couplings) as well as 1 kW or smaller Linear Drive air compressors, vacuum pumps and applied products, and in November 2001 "ISO 14001", also awarded International Standard for environment management systems intended to perform global environment preservation and pollution control.

NITTO KOHKI INDUSTRY (THAILAND) CO., LTD.

Production of CUPLA, Air Compressors, and Vacuum Pumps

ISO 14001 & 9001

NITTO KOHKI INDUSTRY (THAILAND) CO., LTD. factory is accredited under ISO 14000 and ISO 9001.

From Development to Production, Management and Marketing of “CUPLA”

Nitto Kohki has introduced the “integrated product assurance system” that can respond promptly to “users’ requirements” by covering the range of development, quality control, production and marketing in order to ensure supply of high-performance high-quality “CUPLA”.

Nitto Kohki’s Integrated Product Assurance System

Research and Development

The needs of the time and the latest information are gathered and analyzed, and unique technology is utilized to the challenge for ceaseless development of better CUPLA, CUPLA that suggest new applications.

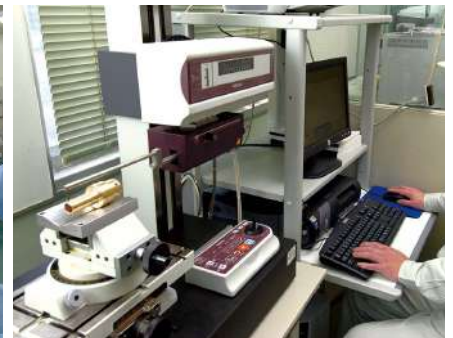

Headquarters and R & D Laboratory

Quality Control

The careful selection of materials, painstaking pursuit of machining precision, and strict surveillance processes such as severe endurance tests have earned trust for CUPLA as a global brand.

Production

High-grade, rationalized, and integrated production system extends from the machining of parts to the assembly and testing of completed products. Robots that we make ourselves for our own plants and many other state-of-the-art facilities that cannot be seen elsewhere have marvelous capacity for mass production. And with them all, we aim to be an establishment of a flexible supply system.

Tochigi Nitto Kohki factory is accredited under ISO 14001 & 9001.

Marketing

Meticulous marketing activities include advertising in the general industrial press and specialist papers, national and local exhibitions, training sessions, catalogs, promotion videos, other presentation tools and technical data sheets for new launches, and unique yet dynamic campaigns, etc.

Nitto Kohki's Laborsaving Products

Nitto Kohki is capturing the needs of users by introducing to the world not only "CUPLA" quick connect couplings, but also next-generation laborsaving devices, including various "Power and Machine Tools", high precision "delvo" electric screwdrivers, and linear-motor-driven free piston "compressors / vacuum pumps".

Nitto Kohki's Quality Products

Machines and Tools to Achieve Energy and Labor Savings in Processing Work

Machines and tools are used at various processing sites for such work as cutting, polishing, scaling, drilling and chamfering of steel materials. We have created a product line up of pneumatic, electric and hydraulic machines and tools to match the diversification of processing methods and the conditions of work operations.

Compressors, Vacuum Pumps and Their Applied Products

NITTO KOHKI pumps are unique products featuring a linear-motor-driven free piston system. NITTO KOHKI has made available a complete series of air compressors and suction pumps that incorporate this uniquely functional design. These are quite appropriate as air sources or suction power units for various pneumatically operated equipment and apparatus in advanced industries.

High Precision "delvo" Electric Screwdrivers for Professional Use

NITTO KOHKI Electric Screwdriver "delvo" is high-quality tools for professional use, with special emphasis on precise control of torque and long life. They apply just the correct amount of torque—with sure, positive control always at your fingertips. They are smooth and shockless in operation, too.

Door Closer "AUTO-HINGE" Series Center Hang Type / Flag Type / Sliding Door Closer

Door closer is a product which allows doors to be closed quietly and safely. Used for various doors worldwide such as medical institutions, wellness centers, offices and transportation equipment. The door closing is automatically controlled by the action of springs and hydraulics, resulting in an armless and neat door.

Safety Guide

Safety Precautions

The safety precautions provide instructions for the safe use of NITTO KOHKI coupling "CUPLA" to avoid the potential danger of bodily harm or damage to surrounding property. The safety precautions are categorized under the headings Danger, Warning and Caution, in accordance with the degree of potential hazard to the body or surrounding property, if CUPLA is used incorrectly. They are all important notes for safety and must be followed as well as in accordance with International standards #1 and other local safety regulations #2.

#1: ISO 4413, Hydraulic Fluid Power – General rules relating to systems
#2: Industrial Health & Safety law (for example)

ISO 4414, Pneumatic Fluid Power – General rules relating to systems

DANGER

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

WARNING

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION

Indicates a potentially hazardous situation which, if not avoided, may result in personal injury or property damage.

DANGER

Stop using the product immediately if there is any anticipated danger of operation or reduced safety.

WARNING

The enclosed safety precautions are only a guideline. When using CUPLA, you are requested to pay particular attention to possible hazardous situations for the application which are not stated in the safety precautions.

Caution When Selecting CUPLA

DANGER

- Connection to a coupling of another brand may cause imperfect connection or disconnection, reduced air tightness, impaired pressure resistance or durability, reduced flow rate and potentially result in an unexpected accident and therefore must be avoided. Nitto Kohki cannot accept liability for any accident that may result by mixed use with the coupling of another brand. Please be sure to check for our marks on the right hand side of this page, which are always inscribed on NITTO KOHKI coupling "CUPLA" when you order and purchase.
- Do not use CUPLA under conditions and environments other than specified in the catalog.

WARNING

- Please consult us prior to use if CUPLA is required for use on machines, equipment or systems (hereafter referred to as "equipment, systems, etc.") for sustaining or controlling human life or body.
- When CUPLA is used for the purpose of ensuring safety, please consult us beforehand.
- The compatibility of the product with specific equipment, systems, etc. must be determined by the person designing the equipment, systems, etc. or the person who decides its specifications based on necessary analysis and test result. The expected performance and safety assurance of the equipment, systems, etc. will be the responsibility of the person who has determined its compatibility with the product.
- If CUPLA is to be used for the following applications, please consult us:
 - Vehicles, aircraft and associated equipment systems that accommodate people
 - Medical facilities or suction equipment that directly affects human body
 - Equipment that directly comes into contact with and runs food, drugs or medicines, drinking water, atomic energy equipment or equipment that ensures safety.
- Selecting the wrong type of seal material may cause a leak. In making your selection, please check the compatibility of the seal material with the type of fluid and temperature used in the application.
- Please consult us prior to selection or use of CUPLA when they are intended for use with corrosive or flammable gases/liquids and/or in atmospheres of these types of gases and liquids.

Warranty and Disclaimer

Our responsibilities for the defects in our products shall be as follows:

- We shall be responsible for any defects in design, material or workmanship of our products, if it is apparent that such defects are due to reasons solely attributable to us.
- Our responsibilities shall be limited to one of the following, as determined by us:
 - (a) repair of any defective products or parts thereof,
 - (b) replacement of any defective products or parts thereof; or
 - (c) compensation for loss and damages incurred by you, which shall in no case exceed the amount of your purchase price for the defective products.
- We shall in no case be liable for any special, indirect or consequential loss or damages, whether such loss or damages are those arising from work stoppage, impairment of other goods or death or personal injury.

Performance, Dimensions and Its Limitation

Please note the performance charts and outside dimensions in this catalog do not take into account any tolerances found in mass production. The information is an average or standard value to be a guide for selecting models and to enable technical appraisal by users.

Beware of Imitations

Recently, similar products which invite misidentification or confusion with NITTO KOHKI coupling "CUPLA" have appeared on the market. Connection with such a similar product to NITTO KOHKI coupling "CUPLA" may cause:

1. Imperfect connection or disconnection
2. Reduced air tightness
3. Impaired pressure resistance or durability
4. Reduced flow rate

and could result in unexpected accidents.

Therefore, connection other than with NITTO KOHKI coupling "CUPLA" must be avoided.

Please be sure to check for our original marks on the right hand side of this page, which are always inscribed on NITTO KOHKI coupling "CUPLA" products, when you order and purchase.

Note:

Nitto Kohki cannot accept any liability for any accident that may occur as a result of using couplings of another brand in conjunction with our own.

Markings

Safety Guide

The following precautions must be taken when using CUPLA. Please contact Nitto Kohki or the outlet / supplier where you purchased the product with regard to repair procedures, certification on the specification or applications of the products.

Precautions Relating to the Use of All CUPLA products

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

CUPLA for Low Pressure (Air)

Caution

- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
- As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
- The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions.
- Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
- The working pressure and working temperature range for hose barb types and braided hose connection types differs depending on the hose to be used.
- Prior to use, confirm that the temperature and the type of fluid to be used is suitable for the hose.
- When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
- Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak. (Applies to thread type)
- Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage. (Applies to thread type, Nut type)
- Care must be taken when installing CUPLA not to overtighten or cross thread, this can cause damage and lead to leakage. (Applies to thread type, Nut type, especially body material: stainless steel)
- Do not use anything other than the applicable hose or tube sizes. It will cause leakage. (Applies to hose or tube fitter connection type)
- Insert the barb (tail) fully into a hose or a tube and secure it tightly with a hose clamp or a nut. Incomplete insertion or insufficient clamping will lead to leakage or sliding off of a hose or a tube from the barb (tail). (Applies to hose or tube fitter connection type)
- Never strike CUPLA when inserting barb (tail) into hose or tube. This could cause poor connection. (Applies to hose or tube fitter connection type)
- Do not use damaged (cracked) or deteriorated hoses or tubes. It will lead to leakage or bursting of hoses or tubes. (Applies to hose or tube fitter connection type)
- Cut off the hose or tube at a designated length from the end when reusing it. Failure to do so will lead to leakage or bursting of the hose or tube. See the "Instruction manual" enclosed with the product for the normal length. (Applies to hose or tube fitter connection type)
- Prior to use, always perform a leak test after installing CUPLA.
- After connection, try to pull the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug may disconnect when pressurized.
- Care should be taken when disconnecting CUPLA whilst still pressurized. To prevent injury due to the Plug popping out, the Socket should be held firmly in one hand and the Plug in the other.
- If the medium is gas, an audible bang may be heard on disconnection. We recommend disconnecting this CUPLA in an unpressurized state. (Except for CUPLA with purge function)
- Put a designated dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface.
- Always install a shut-off valve between the pressure source and CUPLA.
- Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage.
- The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
- Always let fluid flow from socket to plug. It will result in reduced flow. (Except for HI CUPLA Two Way Type)
- Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
- Do not let paint stick to CUPLA. It will cause malfunction or leakage.
- Be careful not to put scratches or dents on CUPLA. Especially, scratches on the sealing parts will cause leakage.
- Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
- Do not drop CUPLA. It will cause leakage or malfunction.
- Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime. The use of a 'Leader' or 'Whip' hose of approx. 30 cm in length between CUPLA and equipment is recommended to help alleviate this.
- Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
- Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA".
- Do not disassemble CUPLA. It will cause leakage or damage.

Cautions on Handling CUPLA HOSE

Caution

- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- Only use CUPLA that are within their rated temperature range. Otherwise the hose will get damaged or deteriorate and cause leakage. It cannot be used continuously at its lowest or highest rated working temperature.
- Do not use on systems that have a high water content, such as drain discharge, this can damage the hose.
- The durability of the Hose differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions.
- Make sure that there is no twist or bend on the hose before use.
- Do not exceed the maximum extensible length, to do so will damage the hose. See catalogue page for full specification details. (Applies to NK CUPLA COIL HOSE)
- Do not bend the hose less than the minimum-bending radius. It will cause damage to the hose. ($\phi 6.5 \times \phi 10$ mm minimum-bending radius : 40 mm, $\phi 6.5 \times \phi 12.5$ mm minimum-bending radius : 50 mm : Applies to NK CUPLA HOSE)
- Do not use with any fluid or medium other than what is specified, to do so could damage the hose.
- The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA. The inclusion of foreign matter in the fluid could damage the hose.
- Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. This may cause damage to the hose.
- Do not use near fire. It will soften or deform the hose and cause damage to the hose.
- Take care not to damage the hose by dragging over rough ground or concrete. It is also important to ensure that the hose does not become kinked or crushed for long periods.
- Do not use for lifting or hoisting, this can damage the hose.
- Store in a shaded, dry and well-ventilated place.
- Cut off the hose at least 3 cm from the end when reusing it. Failure to do so will lead to leakage or bursting of the hose.
- Prior to use, always perform a leak test after installing CUPLA.

CUPLA for Oxygen / Fuel Gas

Warning

- Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage.
- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- Replace CUPLA with a new one if backfire occurs. Backfire damages the body and the seal and will lead to leakage or damage.
- Do not use damaged (cracked) or deteriorated hoses. It will lead to leakage or bursting of hoses. (Applies to hose barb type)
- Never let oil adhere to CUPLA when installing a hose. It will cause spontaneous fire.
- Insert the barb (tail) fully into a hose and secure it tightly with a hose clamp or a nut. Incomplete insertion or insufficient clamping will lead to leakage or sliding off of a hose from the barb (tail). (Applies to hose barb type)
- Prior to use, always perform a leak test after installing CUPLA. Always check for leakage on CUPLA before use. If any leakage is found, stop using immediately.
- Cut off the hose at least 3 cm from the end when reusing it. Failure to do so will lead to leakage or bursting of the hose. (Applies to hose barb type)
- Do not use CUPLA near fire or places where gas accumulates. It will lead to fire or explosion.
- Make sure that the valve on the torch is closed before connecting to CUPLA. If connected with valve open, the gas will flow out and could cause a fire or explosion.
- Do not disassemble CUPLA. It will cause leakage or damage.

Caution

- Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
- The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions.
- Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
- Make sure that O-rings and Packing seals are lubricated with our designated lubricant at all times. The O-rings will get damaged and cause leakage. Not using the designated lubricant will lead to spontaneous fire. (Ask us for the designated lubricant)
- Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak. (Applies to thread type)
- Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage. (Except for hose barb type)
- Do not use anything other than the applicable hose sizes. It will cause leakage. (Applies to hose barb type)
- Never strike CUPLA when inserting barb (tail) into hose. This could cause poor connection. (Applies to hose barb type)
- Do not use damaged (cracked) or deteriorated hoses. It will lead to leakage or bursting of hoses. (Applies to hose barb type)
- After connection, try to pull the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug may disconnect when pressurized.
- Care should be taken when disconnecting CUPLA whilst still pressurized. To prevent injury due to the Plug popping out, the Socket should be held firmly in one hand and the Plug in the other.
- If the medium is gas, an audible bang may be heard on disconnection. We recommend disconnecting this CUPLA in an unpressurized state.
- Always install a shut-off valve between the pressure source and the socket.
- The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
- Always let fluid flow from socket to plug. It will result in reduced flow.
- Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
- Do not let paint stick to CUPLA. It will cause malfunction or leakage.
- Be careful not to put scratches or dents on CUPLA. Especially, scratches on the sealing parts will cause leakage.
- Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
- Do not drop CUPLA. It will cause leakage or malfunction.
- Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
- Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
- Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA".
- Store CUPLA in a dry environment. Moisture will cause corrosion and may also freeze in low temperatures, which may cause malfunction of CUPLA or other equipment.

Precautions Relating to the Use of All CUPLA products

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

MOLD CUPLA / FLOW MONITOR / FLOW METER / HOT WATER CUPLA

Warning

- Do not apply pressure to CUPLA socket while it is disconnected. It will cause leakage or damage. (Applies to MOLD CUPLA or HOT WATER CUPLA)
- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- The fluid in the piping of the plug side will spill out upon disconnection. When using for hazardous fluids (such as hot fluid), discharge all the fluid inside CUPLA before disconnecting, in order to prevent burns, etc. (Applies to MOLD CUPLA)

Caution

- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
 - As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
- Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
- Even if used within the rated operating temperature range, prolonged use of the FLOW METER when under pressure and with the temperature in the upper regions will cause leakage. (Especially when the valve is fully open)
- The durability of CUPLA or FLOW METER differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions.
 - Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
- The working pressure and working temperature range for hose barb types and braided hose connection types differs depending on the hose to be used.
 - Prior to use, confirm that the temperature and the type of fluid to be used is suitable for the hose. (Applies to MOLD CUPLA)
- Make sure that O-rings and Packing seals are lubricated with grease at all times. If not, the O-rings will get damaged and cause leakage.
- Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak. (Applies to MOLD CUPLA thread type or FLOW MONITOR or FLOW METER or HOT WATER CUPLA)
- Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
 - When installing FLOW METER, in order to protect the spherical surface of the ball valve, install it with the valve in a fully opened state as a rule. (Applies to MOLD CUPLA thread type or FLOW MONITOR or FLOW METER or HOT WATER CUPLA)
- When the valve is fully open or closed, there will be a void between valve body and the ball valve which can trap a small amount of fluid under pressure.
 - Before taking the body off from the piping, partially open the valve to allow the pressure to discharge. (Applies to FLOW METER)
- Do not use anything other than the applicable hose sizes. It will cause leakage. (Applies to hose barb type)
- Insert the barb (tail) fully into a hose and secure it tightly with a hose clamp. Incomplete insertion or insufficient clamping will lead to leakage or sliding off of a hose from the barb (tail). (Applies to hose barb type)
- Never strike CUPLA when inserting barb (tail) into hose. This could cause poor connection. (Applies to hose barb type)
- Do not use damaged (cracked) or deteriorated hoses. It will lead to leakage or bursting of hoses. (Applies to hose barb type)
- Cut off the hose at least 3 cm from the end when reusing it. Failure to do so will lead to leakage or bursting of the hose. (Applies to hose barb type)
- Prior to use, always perform a leak test after installing CUPLA.
- After connection, try to pull the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug may disconnect when pressurized. (Applies to MOLD CUPLA or HOT WATER CUPLA)
- Do not connect/disconnect with fluid still under dynamic pressure or static residual pressure. It will cause damage to the valve. (Applies to MOLD CUPLA or HOT WATER CUPLA)
- Always install a shut-off valve between the pressure source and CUPLA.
- Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage.
- Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA.
- The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
- Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the packing if used at 8 m/s or over.
- When using FLOW METER, operate the ball valve slowly to prevent water hammer from occurring.
- Let fluid flow in the direction of the arrow shown on the FLOW METER. (Applies to FLOW METER)
- The FLOW METER may cause malfunction of the float due to contamination of foreign matter, water scale or air bubbles inside the fluid.
- Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
- Do not let paint stick to CUPLA. It will cause malfunction or leakage.
- Be careful not to put scratches or dents on CUPLA. Especially, scratches on the sealing parts will cause leakage. (Applies to MOLD CUPLA or HOT WATER CUPLA)
- Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
- Do not drop CUPLA. It will cause leakage or malfunction.
- Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
- Use only as quick connect couplings/flow meter for fluid pipelines. (It cannot be used as a swivel joint)
- Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA". (Applies to MOLD CUPLA or HOT WATER CUPLA)
- Do not disassemble CUPLA. It will cause leakage or damage.
- When storing FLOW METER, ensure that the valve is fully open. If stored with the valve partially open, the packing will deform and cause leakage.
- Do not replace the Flow Vane ASSY when FLOW MONITOR is in high temperature state, pressurized state or when pressure is remaining.
- Do not replace the Flow Vane ASSY with the stop valve open. Be sure to install a stop valve on the source pressure side of FLOW MONITOR. The impeller may stop even if fluid is flowing due to foreign matter. (Applies to FLOW MONITOR)
- FLOW MONITOR is designed mainly for water. If water containing oil or rust preventive agent is used, the durability of plastic parts may be reduced.
 - After checking with the actual machine under your operating environment conditions, please determine whether FLOW MONITOR can be used.
- Prior to use, always perform a leak test after installing FLOW MONITOR and replacing the Flow Vane ASSY. (Applies to FLOW MONITOR)
- Attach the Stopper to the notch on the main unit. (Applies to FLOW MONITOR)
- Be sure to purify the working fluid through a mesh filter smaller than 40 mesh. (Applies to FLOW MONITOR)
- Use FLOW MONITOR in the flow rate range of 2 L/min to 20 L/min. (Applies to FLOW MONITOR)
- When flowing air into FLOW MONITOR (Air purge of mold temperature controller, etc.), do not flow continuously for a long time. It may cause malfunction of the impeller and damage to plastic parts. (Applies to FLOW MONITOR)
- Do not use it for any purpose other than visual inspection of fluid flow. (Applies to FLOW MONITOR)
- FLOW MONITOR has a swivel structure, but do not rotate it except for installation and removal.
- When cleaning FLOW MONITOR, use a method that will not affect the seal material, plastic and body material.

CUPLA for Low Pressure (Water, Liquid) and for Medium Pressure

Warning

- Do not apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage. (Applies to Valve Structures: Two-way shut-off type and One-way shut-off type)
- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- The fluid in the piping will spill out upon disconnection. When using for hazardous fluids (such as hot fluid), discharge all the fluid inside CUPLA before disconnecting, in order to prevent burns, etc. (Applies to Valve Structures: Straight through type and One-way shut-off type)

Caution

- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
 - As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
- Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
- Even if used within the rated operating temperature range, prolonged use of TSP CUPLA Socket with Ball Valve when under pressure and with the temperature in the upper regions will cause leakage. (Especially when the valve is fully open)
- The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions.
 - Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
- The working pressure and working temperature range for hose barb types and braided hose connection types differs depending on the hose to be used.
 - Prior to use, confirm that the temperature and of the type of fluid to be used is suitable for the hose or tube.
- When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
- Make sure that O-rings and Packing seals are lubricated with grease at all times. If not, the O-rings will get damaged and cause leakage. (Except CUPLA with end face seal construction)
- Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak. (Applies to thread type)
- Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
 - When installing TSP CUPLA Socket with Ball Valve, in order to protect the spherical surface of the ball valve, install it with the valve in a fully opened state as a rule. (Applies to thread type, Nut type)
- Care must be taken when installing CUPLA not to overtighten or cross thread, this can cause damage and lead to leakage. (Applies to thread type, Nut type, especially body material: stainless steel)
- When the valve is fully open or closed, there will be a void between valve body and the ball valve which can trap a small amount of fluid under pressure.
 - Before taking the body off from the piping, partially open the valve to allow the pressure to discharge. (Applies to TSP CUPLA Socket with Ball Valve)
- Do not use anything other than the applicable hose or tube sizes. It will cause leakage. (Applies to hose or tube fitter connection type)
- Insert the barb (tail) fully into a hose or a tube and secure it tightly with a hose clamp or a nut. Incomplete insertion or insufficient clamping will lead to leakage or sliding off of a hose or a tube from the barb (tail). (Applies to hose or tube fitter connection type)
- Never strike CUPLA when inserting barb (tail) into hose or tube. This could cause poor connection. (Applies to hose or tube fitter connection type)
- Do not use damaged (cracked) or deteriorated hoses or tubes. It will lead to leakage or bursting of hoses or tubes. (Applies to hose or tube fitter connection type)
- Cut off the hose or tube at a designated length from the end when reusing it. Failure to do so will lead to leakage or bursting of the hose or tube. See the "Instruction manual" enclosed with the product for the normal length. (Applies to hose or tube fitter connection type)
- Prior to use, always perform a leak test after installing CUPLA.
- After connection, try to pull the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug may disconnect when pressurized.
- Put a designated dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface.
- Do not connect/disconnect with fluid still under dynamic pressure or static residual pressure. It will cause damage to the valve. (Applies to Valve Structures: Two-way shut-off type and One-way shut-off type)
- Always install a shut-off valve between the pressure source and CUPLA.
- Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or malfunction. (Applies to medium pressure, Valve Structure: Two-way shut-off type) However, if you need to relieve residual pressure, please consult us.
- Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage.
- Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA.
- The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
- Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over. (Applies to Valve Structures: Two-way shut-off type and One-way shut-off type)
- When using TSP CUPLA Socket with Ball Valve, operate the ball valve slowly to prevent water hammer from occurring. Also be careful not to get fingers caught when operating the handle.

Safety Guide

Precautions Relating to the Use of All CUPLA products

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

CUPLA for Low Pressure (Water, Liquid) and for Medium Pressure

Caution

- Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
- Do not let paint stick to CUPLA. It will cause malfunction or leakage.
- Be careful not to put scratches or dents on CUPLA. Especially, scratches on the sealing parts will cause leakage.
- Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
- Do not drop CUPLA. It will cause leakage or malfunction.
- Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
- Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
- Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA". (Except LEVER LOCK CUPLA)
- Do not disassemble CUPLA. It will cause leakage or damage.
- When storing TSP CUPLA Sockets with Ball valve, ensure that the valve is fully open. If stored with the valve partially open, the packing will deform and cause leakage.

CUPLA for High Pressure

Danger

- Do not apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage.

Warning

- Do not use CUPLA continuously exceeding the rated working pressure. Also, do not use 700R CUPLA in an environment where there is impulse pressure. It will cause leakage or damage.
- Do not connect/disconnect with fluid still under dynamic pressure or static residual pressure. It will cause damage to the valve. However, the HSP-PV type can be connected under static residual pressure.
- After connection, try to pull the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug may disconnect when pressurized.
- Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA". However, 280 CUPLA is interchangeable with couplers complying with ISO7241-1A.
 - When using by connecting 280 CUPLA with other brand's, compare the pressure specifications and use under the lower pressure.
- Do not disassemble CUPLA. It will cause leakage or damage.

Caution

- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
 - As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
- Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
- The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions.
 - Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
- When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
- Make sure that O-rings and Packing seals are lubricated with grease or oil at all times. If not, the O-rings will get damaged and cause leakage.
- Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak.
- Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
- Care must be taken when installing CUPLA not to overtighten or cross thread, this can cause damage and lead to leakage. (Applies to HSU CUPLA, S210 CUPLA)
- Prior to use, always perform a leak test after installing CUPLA.
- Put a designated dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface.
- Always install a shut-off valve between the pressure source and CUPLA.
- Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or malfunction. However, if you need to relieve residual pressure, please consult us.
- Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage. Do not use 280 CUPLA with water-glycol operating oil. The plating will dissolve.
- Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA.
- The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
- Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over.
- Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
- Do not let paint stick to CUPLA. It will cause malfunction or leakage.
- Be careful not to put scratches or dents on CUPLA. Scratches on the sealing parts will cause leakage. Especially, be careful about the seating surface of HSP CUPLA with male parallel thread with 30° flare.
- Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
- Do not drop CUPLA. It will cause leakage or malfunction. If FLATFACE CUPLA FF plug is dropped, there is a possibility that the valve may open, to re-set, connect the Socket to the Plug and disconnect, the valve will return to its original position.
- Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
- Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
- When using O-Ring seals for GP Type or GS Type of HSP CUPLA, use the O-Ring size described on the "Instruction manual" enclosed with the product.
- Due to the metal-touch valve structure, 450B CUPLA and 700R CUPLA will slightly leak when not coupled.
- Contact us when using CUPLA for high pressure gases.

MULTI CUPLA Series

Overall MULTI CUPLA

Caution

- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
 - As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
- Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
- The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions.
 - Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
- When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
- Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak. (Applies to Snap ring mount Type, MAM Type, MAM-A Type, MAM-B Type)
- Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
- Prior to use, always perform a leak test after installing CUPLA.
- Always install a shut-off valve between the pressure source and CUPLA.
- Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage.
- The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
- Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
- Do not let paint stick to CUPLA. It will cause malfunction or leakage.
- Be careful not to put scratches or dents on CUPLA. Scratches on the sealing parts will cause leakage.
- Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
- Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
- Use only as quick connect couplings for fluid pipelines.
- Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA".

MAM Type

Warning

- Do not connect/disconnect with fluid still under dynamic pressure or static residual pressure exceeding the maximum working pressure. It will cause damage to CUPLA.
- Do not drop MULTI CUPLA. It will cause deformation of the plate.

Caution

- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- Make sure that O-rings and Packing seals are lubricated with grease or oil at all times. If not, the O-rings will get damaged and cause leakage.
- Do not deform the stop ring when installing CUPLA. If the stop ring is widened, it may come off from its groove and lead to poor connection or damage of CUPLA. Also change the stop ring with a new one when replacing CUPLA.
- Install hoses symmetrically from the locking unit when they are connected to CUPLA in order to distribute the reaction force evenly. Failure to do so will lead to breakage.
- Connect after making sure that the lever is in the "connect" position. It will not connect if it is not in the "connect" position.
- Do not force turning the lever. It will cause breakage.
- Do not disassemble CUPLA. It will cause leakage or damage.

Precautions Relating to the Use of All CUPLA products

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

MULTI CUPLA Series

MAM-A Type / MAM-B Type

Warning

- Do not connect or disconnect CUPLA while they are pressurized or residual pressure of more than 0.6 MPa remains. It will cause damage to CUPLA.
- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- Do not drop MULTI CUPLA. It will cause deformation of the plate.

Caution

- Make sure that O-rings and Packing seals are lubricated with grease or oil at all times. If not, the O-rings will get damaged and cause leakage.
- Install the C type retaining ring by using a pair of snap ring pliers. If the C type retaining rings are expanded too much, it will come off from its groove and lead to poor connection or breakage. Also change the retaining ring with a new one when replacing CUPLA.
- Install hoses symmetrically from the locking unit when they are connected to CUPLA in order to distribute the reaction force evenly. Failure to do so will lead to breakage.
- Connect after making sure that the lever is in the "connect" position. It will not connect if it is not in the "connect" position.
- Do not force turning the lever. It will cause breakage.
- Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or malfunction.
- Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA.
- Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over.
- Do not disassemble CUPLA. It will cause leakage or damage.

MAS Type / MAT Type

Warning

- Do not apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage.
- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.

Caution

- Make sure that O-rings and Packing seals are lubricated with grease or oil at all times. If not, the O-rings will get damaged and cause leakage.
- Keep the center axis eccentricity of the Socket and Plug within 0.6 mm diameter. Failure to do so will lead to leakage or breakage.
- Install the C type retaining ring by using a pair of snap ring pliers. If the C type retaining rings are expanded too much, it will come off from its groove and lead to poor connection or breakage. Also change the retaining ring with a new one when replacing CUPLA. (Applies to MAS Type CUPLA)
- Care must be taken when installing CUPLA not to overtighten or cross thread, this can cause damage and lead to leakage.
- When connecting, connect socket and plug together tightly without a gap. If the gap exceeds 0.5 mm the flow will be reduced.
- For the load required to maintain connection when CUPLA is connected, see the page in this catalog where MAS Type/MAT Type is described. Connection exceeding the maximum acceptable load will cause breakage. Connecting below the minimum load required to maintain connection will result in reduced flow.
- Do not connect/disconnect with fluid still under dynamic pressure or static residual pressure. It will cause damage to the valve.
- Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or malfunction.
- Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA.
- Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over.
- Do not drop CUPLA. It will cause leakage or malfunction.
- Do not disassemble CUPLA. It will cause leakage or damage.

MALC-01 Type

Caution

- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- Keep the center axis eccentricity of the Socket, Plug and/or hole in the plate within 2 mm diameter. Failure to do so will lead to leakage or breakage. For the dimensions of end configurations for processing on plates, see the page in this catalog where MALC-01 Type is described.
- Oblivity of socket and plug must be within 0.5 degrees during connection or disconnection. If installed exceeding 0.5 degrees, it will cause leakage or damage.
- When connecting, connect socket and plug together tightly without a gap. However, it can be used even when the gap is 0.5 mm. If the gap exceeds 0.5 mm the flow will be reduced.
- For the load required to maintain connection when CUPLA is connected, see the page in this catalog where MALC-01 Type is described. Connection exceeding the maximum acceptable load will cause breakage. Connecting below the minimum load required to maintain connection will result in reduced flow.
- When using water, judge whether CUPLA can be used or not by conducting a performance evaluation test under your actual operating environment and conditions. Leakage may occur according to rust or foreign matter in the piping or solidified minerals. Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA.
- Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over.
- Do not drop CUPLA. It will cause leakage or malfunction.
- Do not disassemble CUPLA. It will cause leakage or damage.

MALC-SP Type / MALC-HSP Type

Danger

- Do not use uncoupled socket or plug continuously exceeding its rated working pressure. It will cause leakage or damage. (Applies to MALC Type CUPLA)

Warning

- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- Do not disassemble CUPLA. It will cause leakage or damage.

Caution

- Keep the center axis eccentricity of the Socket and Plug within 2 mm diameter. Failure to do so will lead to leakage or breakage.
- Oblivity of socket and plug must be within 0.5 degrees during connection or disconnection. If installed exceeding 0.5 degrees, it will cause leakage or damage.
- Install the C type retaining ring by using a pair of snap ring pliers. If the C type retaining rings are expanded too much, it will come off from its groove and lead to poor connection or breakage. Also change the retaining ring with a new one when replacing CUPLA. (Applies to Snap ring mount Type)
- Care must be taken when installing CUPLA not to overtighten or cross thread, this can cause damage and lead to leakage. (Applies to MALC-SP Type CUPLA)
- When connecting, connect socket and plug together tightly without a gap. However, it can be used even when the gap is 0.5 mm. If the gap exceeds 0.5 mm the flow will be reduced.
- For the load required to maintain connection when CUPLA is connected, see the page in this catalog where MALC-SP Type or MALC-HSP Type is described. Connection exceeding the maximum acceptable load will cause breakage. Connecting below the minimum load required to maintain connection will result in reduced flow.
- Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or malfunction.
- Use it in the state that the fluid does not freeze in the case of water. If it freezes, it will cause damage to CUPLA.
- Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over.
- Do not drop CUPLA. It will cause leakage or malfunction.

SEMICON CUPLA Series

Warning

- Do not apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage.
- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage. (The "Seal Material Selection Table" and "Body Material Selection Table" described in our product catalog is for reference only.)
- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
- When using hazardous fluids, always wear protective clothing which are suitable for the fluid being used and will protect the whole body. Any spillage or leakage should be dealt with by an expert in that product.
- Do not connect/disconnect with fluid still under dynamic pressure or static residual pressure. It will cause damage to the valve.
- When using pressure tanks, connect/disconnect as follows:
Connection: Connect CUPLA on the nitrogen gas side first, and then reduce the nitrogen gas pressure to ambient pressure. Only after then, connect CUPLA on the liquid side.
Disconnection: Reduce the nitrogen gas pressure to ambient pressure, and confirm that the internal pressure has become ambient pressure. Only after then, disconnect CUPLA on the liquid side.
- Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or malfunction. However, if you need to relieve residual pressure, please consult us.

Caution

- The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions. Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions. O-rings are consumable items. Replace them periodically.
- If necessary, conduct an elution test and confirm the suitability of the material.
- When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
- Apply a fluoropolymer resin sealant tape on male tapered pipe threads to ensure no leak.
- Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage. (Applies to SP Type, SCS Type, SCY Type)

Safety Guide

Precautions Relating to the Use of All CUPLA products

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

SEMICON CUPLA Series

Caution

- Care must be taken when installing CUPLA not to overtighten or cross thread, this can cause damage and lead to leakage. (Applies to SP Type, SCS Type, SCY Type)
- When installing SCT Type or SCAL Type CUPLA, firstly apply a fluoropolymer resin sealant tape on the male tapered pipe thread and tighten firmly by hand. Then, additionally tighten with a wrench by turning it 1 3/4 to 2 turns. At this time, overtightening will damage the thread and cause leakage, so be careful.
- Do not use anything other than the applicable tube sizes. It will cause leakage.
- Contact us if detail dimensions of the fixing part is required, such as 19/32-18UNS (for SP Type or SCS Type) or application shape for plugs of SCF Type CUPLA.
- Prior to use, always perform a leak test after installing CUPLA.
- For the purpose of reducing the insertion load on connection and to prevent O-ring from damage, apply pure water or a lubricant that is suitable for the operational environment to the Plug tip and sealing surface. (Applies to SP Type, SCS Type)
- After connection, try to pull the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug may disconnect when pressurized.
- For fluoropolymer resin CUPLA, continuous use under dynamic pressure will result in reduced performance. To extend lifetime, it is recommended to be kept unpressurized unless it is necessary.
- Since the bellows of the SCAL Type CUPLA Socket is made of polytetrafluoroethylene (PTFE), a small amount of gas will escape.
- When using for hazardous fluids, discharge all the fluid inside CUPLA with nitrogen gas, etc., before disconnecting. If disconnected without discharging the fluid, a small amount of fluid will spill out.
- Always mount a designated dust cap after disconnection. Any foreign matter adhering to the sealing surface will cause leakage.
- Always install a shut-off valve between the pressure source and CUPLA.
- The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
- Design and keep the fluid flow speed through CUPLA below 8 m/s. It will cause damage to the valve if used at 8 m/s or over.
- Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
- Do not let paint stick to CUPLA. It will cause malfunction or leakage.
- Be careful not to put scratches or dents on CUPLA. Scratches on the sealing parts will cause leakage. Especially, CUPLA made of fluoropolymer resin are deformed easily, so be careful.
- Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
- Do not drop CUPLA. It will cause leakage or malfunction.
- Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
- Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
- Do not disassemble CUPLA. It will cause leakage or damage.
- Check CUPLA regularly. Stop using immediately if anything unusual is found on CUPLA.

CUPLA for Inert Gas

Warning

- Do not apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage. (Applies to SP-V CUPLA TypeA)
- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- The fluid in the piping will spill out upon disconnection. Take extra care when using at places where it is liable to cause anoxia. (Applies to PCV PIPE CUPLA)

Caution

- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
- Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
- The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions. Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions. Please replace PCV PIPE CUPLA at approximately 5000 times connections/disconnections. (It differs depending on the operating environment and conditions)
- When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
- Apply thread sealants on male tapered pipe threads to ensure no leak.
- Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
- Care must be taken when installing CUPLA not to overtighten or cross thread, this can cause damage and lead to leakage. (Applies to SP-V CUPLA TypeA Body material: Stainless steel)
- Prior to use, always perform a leak test after installing CUPLA.
- Make sure that O-rings are lubricated with grease at all times. If not, the O-rings will get damaged and cause leakage. (Applies to SP-V CUPLA TypeA seal materials: CR, FKM)
- For the purpose of reducing the insertion load on connection and to prevent O-ring from damage, apply a lubricant that is suitable for the operational environment to the Plug tip and sealing surface. (Applies to SP-V CUPLA TypeA Seal material: HNBR)
- Do not use pipe sizes other than the suitable sizes. It will cause leakage. Contact us if required to use Aluminum alloy pipes. (Applies to PCV PIPE CUPLA)
- Chamfer the edge of the copper pipe to be used. If not chamfered, it will damage the packing and cause leakage. Do not use pipes with deformation or burrs. It will lead to leakage or poor connection. (Applies to PCV PIPE CUPLA)
- When connecting copper pipes, push down the lever only after confirming that the end of the copper pipe is pressed against the packing inside CUPLA. At this time, be careful not to get fingers caught. (Applies to PCV PIPE CUPLA)
- After connection, try to pull the socket and plug apart or CUPLA and pipe apart to confirm secure connection. If the connection is incomplete, the socket and plug or CUPLA and pipe may disconnect when pressurized.
- Do not disconnect with fluid still under dynamic pressure or static residual pressure. (Applies to PCV PIPE CUPLA)
- Contact us if it is required to connect/disconnect SP-V CUPLA TypeA under dynamic pressure or static residual pressure.
- When connected with the copper pipe, do not rotate the pipe. It will damage the packing and cause leakage. (Applies to PCV PIPE CUPLA)
- Put a designated dust cap on CUPLA after disconnection when there is a possibility of foreign matter such as dirt sticking to the seal surface. (Applies to SP-V CUPLA TypeA)
- When disconnected, store CUPLA with the lever in the 'Open' position. (Applies to PCV PIPE CUPLA)
- Always install a shut-off valve between the pressure source and CUPLA.
- Do not strike the tip of an automatic shut-off valve with a hammer or a similar tool. It will cause leakage or malfunction. (Applies to SP-V CUPLA TypeA) However, if you need to relieve residual pressure, please consult us.
- Do not use with any fluid or medium other than what is specified, to do so could cause leakage or damage.
- The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
- Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
- Do not let paint stick to CUPLA. It will cause malfunction or leakage.
- Be careful not to put scratches or dents on CUPLA. Especially, scratches on the sealing parts will cause leakage.
- Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
- Do not drop CUPLA. It will cause leakage or malfunction.
- Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
- Stop using CUPLA if the lever is deformed. (Applies to PCV PIPE CUPLA)
- Ensure that any copper residue or swarf that has adhered to the inside of CUPLA is removed after use. (Applies to PCV PIPE CUPLA)
- Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint) (Applies to SP-V CUPLA TypeA)
- Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA". (Applies to SP-V CUPLA TypeA)
- Do not disassemble CUPLA. It will cause leakage or damage.

PAINT CUPLA

Warning

- Make sure that a hose containing a ground wire is connected to a ground. Insufficient grounding will lead to fire or dangerous explosion caused by possible sparks of static electricity.
- Wear appropriate clothes and protective equipment such as safety glasses, face guard and gloves at all times. Otherwise it could be potentially hazardous when paint or solvent splashes on to operators.

Caution

- This CUPLA is designed for paints diluted by solvents. Do not use this CUPLA for any other applications such as Powder coating, Electrostatic coating or Electrodeposition coating. The seal material will deteriorate and cause leakage. As to the use of any special paint or solvent, make thoroughly sure of the material compatibility.
- Do not use CUPLA continuously exceeding the rated working pressure. It will cause leakage or damage.
- Only use CUPLA that are within their rated temperature range. Otherwise this can lead to leakage through seal deterioration or damage. It cannot be used continuously at its lowest or highest rated working temperature.
- The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.). If necessary, conduct performance evaluation test under your actual operating environment and conditions. Also, stress corrosion cracking may occur if used under corrosive environment. Take note of usage conditions.
- Do not exceed the recommended maximum torque when screwing in to the male or female thread of CUPLA for installation. It will cause damage.
- Prior to use, always perform a leak test after installing CUPLA.
- After connection, try to pull the socket and plug apart to confirm secure connection. If the connection is incomplete, the socket and plug may disconnect when pressurized.
- The fluid in the piping of the plug side will spill out upon disconnection. Be careful so that it will not contact the human body.
- Clean CUPLA each time after use. Otherwise paint will dry out and will cause malfunction, insufficient color mix or poor grounding. When cleaning CUPLA, care must be taken not to use any material that will affect the seal and body materials.
- When cleaning, do not try to open the valve by inserting something except the plug into the socket. It will cause leakage.
- Always install a shut-off valve between the pressure source and CUPLA.
- The use of inline filters is strongly advised and recommended. To prevent damage, the fluid should be clean before reaching CUPLA.
- Always let fluid flow from socket to plug.
- Do not use CUPLA in areas or environment where dust such as sand or metal powder can get in to CUPLA. It will lead to malfunction or leakage.
- Be careful not to put scratches or dents on CUPLA. Especially, scratches on the sealing parts will cause leakage.
- Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
- Do not drop CUPLA. It will cause leakage or malfunction.
- Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
- Use only as quick connect couplings for fluid pipelines. (It cannot be used as a swivel joint)
- Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA".
- Do not disassemble CUPLA. It will cause leakage or damage.

⚠ Precautions Relating to the Use of All CUPLA products

Be sure to read the "Instruction Sheet" that comes with the product or "Caution" on the package before use.

HYGIENIC CUPLA

⚠ Warning

Any residual fluid remaining in the passage will spill out on disconnection. Drain any residual fluid before disconnection to avoid burns or injury to the skin when dangerous fluid such as chemical agent or high temperature fluid is used. If the fluid comes into contact with the skin, stop the disconnecting work and consult a doctor if necessary.

⚠ Caution

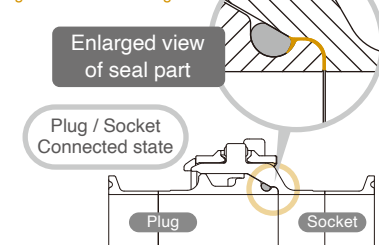

Observe the cautions below. If not observed, it could result in burns, injury to the skin, damage to the product or other machinery when dangerous fluid such as chemical agent or high temperature fluid is used. Stop using CUPLA immediately if this happens.

- CUPLA can be easily disassembled for cleaning. CUPLA should be evaluated before use to determine the suitability with regard to sanitation and safety. Especially when using O-rings of other brands than Nitto Kohki, be sure to evaluate the O-ring at your end.
- Prior to use, check the compatibility of the seal material and body material against the temperature and the fluid to be used. Selecting the wrong seal material will lead to leakage.
- Do not use CUPLA continuously under any pressure exceeding the rated working pressure. This may cause leakage or damage.
- Use only within range of its rated temperature. May cause damage or deterioration to the sealing and leak if used otherwise.
- Also, do not use continuously at the lowest or highest working temperature.
- The durability of CUPLA differs depending on the operating environment and conditions (pressure and temperature etc.).
- If necessary, conduct performance evaluation test under your actual operating environment and conditions.
- When assembling, disassembling and washing, do not drop the disassembled parts, or put scratches on the sealing surface. It will cause malfunction or leakage.
- When washing, do not deform the lock plate by applying excessive force. It will cause bad connection.
- When assembling or disassembling, do not put scratches on the O-ring. Also do not attach the O-ring in a twisted state. It will cause leakage.
- When welding to CUPLA, do so with CUPLA in disassembled state. Welding in assembled state will deform the parts or damage the O-ring and cause leakage.
- The outer diameter and thickness of the pipe to be welded to CUPLA must conform to JIS G 3447.
- After welding to CUPLA, please polish the welded part. (Surface roughness $Ra \leq 1.0 \mu m$ recommended for the liquid contact parts. Surface roughness on the weld line should not exceed $Ry=16 \mu m$.)
- If it is not polished or if the surface roughness becomes rougher than the recommended value, it may potentially cause the spread of bacteria.
- Malfunction caused by welding (directly or otherwise) is not included in the warranty.
- For the ferrule type, please use ferrule couplings conforming to IDF/ISO 2852.
- Prior to use, always perform a leak test after installing CUPLA.
- When a high temperature fluid is applied to CUPLA, be careful in handling CUPLA as it also becomes hot.
- If CUPLA is used in a high temperature atmosphere, the cam handle may not rotate smoothly.
- In such case, please apply water, etc. to the part where the cam handle and the lock plate ASSY is in contact.
- When powder is applied to CUPLA, static electricity may be generated. Please take countermeasure against this if required.
- When CUPLA remains connected for long periods of time, it may become difficult to disassemble.
- In this case, do not forcefully turn the socket and plug to disconnect as this may damage the seal material and cause leakage.
- Do not disconnect with fluid still under dynamic pressure or static residual pressure.
- Do not drop CUPLA. It will cause leakage or malfunction.
- Always install a shut-off valve between the pressure source and CUPLA.
- Do not apply any artificial impact, bend or tension. It will cause leakage or damage.
- Connecting CUPLA directly to vibrating or impacting equipment will result in reduced lifetime.
- Use only as quick connect couplings for fluid pipelines.
- Only use CUPLA in a combination with NITTO KOHKI coupling "CUPLA".
- Check CUPLA regularly. Stop using immediately if anything unusual is found on CUPLA.
- When storing CUPLA, remove the O-ring from the plug. Otherwise, it may become difficult to remove due to adsorption.
- Before using CUPLA, disassemble and clean it in the way that is appropriate to your usage conditions and not affecting the seal material and body material.

Seal part (cross section)

Because of the structure of this product, dead space is generated when using.

- The O-ring and Lock plate ASSY are consumable items.
- Please replace the Lock plate ASSY at approximately 1,000 times connections/disconnections.
- When the Lock plate ASSY is deformed, replace it with a new one regardless of connection/disconnection times.
- The durability of the O-ring differs depending on the operating environment and conditions (pressure and temperature etc.).

SEMI-STANDARD CUPLA Series

Contact us separately for detail cautions for the SEMI-STANDARD CUPLA series.

Maintenance of CUPLA

O-ring Replacement Procedure

The internal O-ring is a consumable item. If the O-ring in the socket has failure such as wear and tear or deterioration, take the following steps to replace it with a new one. Always use genuine Nitto Kohki O-rings.

Accessories for O-ring maintenance

Grease for O-ring

5 mL container

O-ring replacement Jig

PMJ-1 (Small)

PMJ-2 (Large)

- GRE-M1 (Mineral grease) for NBR and FKM
- GRE-HC1 (Hydrocarbon grease) for NBR and FKM
- GRE-S1 (Silicone grease) for NBR, FKM, and EPDM
- GRE-S2 (Silicone grease) for NBR, FKM, and EPDM (NSF H1, NSF 61 registered product)
- GRE-S3 (Silicone grease) for NBR, FKM, and EPDM

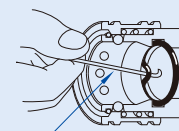

⚠ Caution for Storing CUPLA

- Store CUPLA in a place where no dust or foreign matter gets in. If fluid flows while the dust or foreign matter is present inside CUPLA, the dust or foreign matter may go into the equipment connected to CUPLA and may cause malfunction.
- Store CUPLA indoors away from water or moisture.
- Store CUPLA in a shaded, dry and well-ventilated place.
- Do not drop CUPLA. It will deform or damage CUPLA.
- If CUPLA is stored or not being used for a long period of time, check their appearance, function and performance before use.

CUPLA should be inspected periodically to ensure safe operation and to prevent them from a performance drop or malfunction. If there is a malfunction in CUPLA or wear and tear, please replace it with a new one. If you have any concerns, contact Nitto Kohki or the distributor from whom you purchased your CUPLA.

How to Remove the O-ring

- 1 Use an optional O-ring replacement Jig to remove the O-ring. Be careful not to damage the groove of O-ring with the jig. Used O-rings with wear and tear or deterioration can be removed easily with the jig.
- 2 After removing the O-ring, wipe the groove clean with a cloth.

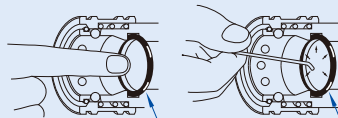

O-ring replacement Jig

How to Install a New O-ring

- 1 After making sure that no dust or foreign matter exists in the groove of O-ring, push in part of the O-ring and the remaining part can be easily pressed in with the jig.

- 2 HSP CUPLA has a backup ring. Insert an O-ring in the place as shown in the figure. If CUPLA connection/disconnection is hard and not smooth after the O-ring has been replaced, apply a little grease to the O-ring.

O-ring

Press the O-ring into place with the jig.

Backup ring for HSP

O-ring
