Hand Valve - Shut-Off Valve (On-Off 2 way, 3 way)

Characteristics

- The Hand valve (shut-off valve) turns on and off air pressure to a pneumatic device or a circuit.
- The three way, pressure relief type isolates the supplied air pressure and exhausts the downstream pressure for maintenance purpose while the two way type holds the downstream pressure.
- 4 types are available to fit the application requirement.

Construction

2-way valve

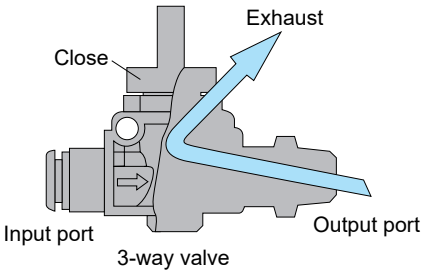
No code: Hexagon flat-to-flat mm spec.

About 3-way and 2-way Valves



The three way valve releases the residual pressure from the downstream (connected devices) when turning off. It is necessary to protect the systems against malfunction or decrease the pressure so the systems may be maintained. The two way valve holds the pressure so it is ideal for the application where the residual pressure maintained such as an air tank or some vacuum system.

Detailed Safety Instructions

Before using the PISCO device, be sure to read the "Safety Instructions", "Common Safety Instructions for Products Listed in This Manual" and "Common Safety Instructions for Change Series Valves".

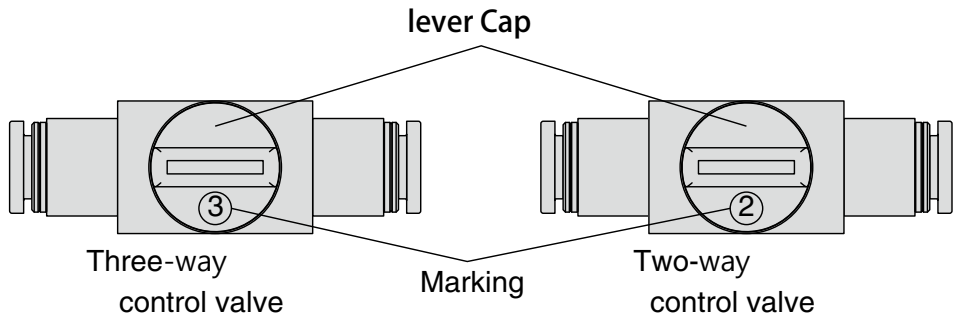
△Caution

1. When operating the cap lever, turn it 90 degrees completely until it stops. Inadequate turning may result in poor conduction or low flow rate due to faulty switching.
2. Distinguish between the two-directional and the three-directional control valve by checking the marking②or③ on the top surface of the cap lever.
3. For use with negative pressures, provide a vacuum filter on the suction side. Otherwise dust sucked in may cause malfunction.

■ Identification between Three-directional control valve and Two-directional control valve Check the marking on the lever cap

③: Three-directional control valve - 3-way

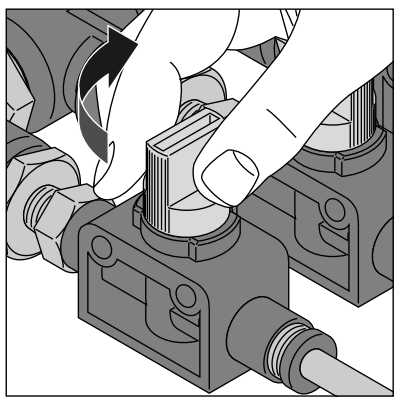
②: Two-directional control valve - 2-way



■ Cap lever operation

1. Open the valve

To open the valve, turn the cap lever 90 degrees until it stops.



2. Close the valve

To close the valve, turn the cap lever 90 degrees counterclockwise until it stops.

As for three-way valve, the residual pressure in outlet side **is released from the gap between the lever cap and the body when turning it off.**
