

For vacuum applications

# SP-V CUPLA Type A

For air conditioner and refrigerator production lines

Applicable fluid Inert gas Vacuum Air Water

Stainless steel

# **CUPLA** for refrigerant charging and evacuation

Excellent sealing structure with a built-in automatic shut-off valve developed for refrigerant charging and evacuation. Both socket and plug are completely sealed when disconnected, withstanding up to vacuum of 1.3 x 10<sup>-1</sup> Pa (1 x 10<sup>-3</sup> mmHg). Three types of seal material are available to suit for production lines of air conditioners, refrigerators, etc (charging, evacuation and inspection work).

The "V" mark is engraved on the hex. part of the plug and the flat part of the socket to distinguish from SP CUPLA Type A.

**Brass** 

The flow rate is increased by up to 141% more than that of conventional SP-V CUPLA.

(Test conditions: • Fluid: Water • Temperature: 25°C±5°C)

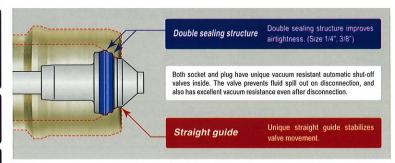

Increased durability by carrying out stress analysis and revising the packing shape.

A straight guide is incorporated to stabilize valve return movement.

A double sealing structure improves airtightness. (Size 1/4", 3/8")

Three types of seal material are available.

Holds vacuum even when disconnected.

Seal materials for refrigerants
Various eco-friendly refrigerants for air conditioner and refrigerator have been developed. NITTO KOHKI, having invested years in the research and development of excellent seal materials to withstand ferigerants and refrigerant oils, has made early attempts to develop and manufacture the seal materials for these eco-friendly refrigerants.

Seal material Hydrogenated nitrile rubber  Mark HNBR		Chloroprene rubber CR		
Application	Refrigerator production lines Air conditioner production lines	Air conditioner production lines		

Chloroprene rubber (CR), Fluoro rubber (FKM), and Hydrogenated nitrile rubber (HNBR) are available for various fluids.

Withstands a vacuum up to 1.3 x 10<sup>-1</sup> Pa (1 x 10<sup>-3</sup> mmHg).

- 1: Stainless steel models (Rc 1/2 and Rc 3/4) are made-to-order items.
- 1. Ordiniess steer indees (the 2 and no 3/y ale indee/order items.)
  2: The normal allowable fluid pressure under continuous use.
  Continuously exceeding the working pressure may cause leakage or damage.

  13: No lubricant is applied to the O-ring of the socket for HNBR seal material products when shipping.
- Be sure to apply refrigerating machine oil before use.
  \*4: The working temperature range depends upon the operating conditions.

#### Flow Direction

Fluid flow can be bi-directional when socket and plug are connected.

#### Interchangeability

Socket and plug of different sizes cannot be connected. Interchangeable with SP CUPLA Type A, SP-V CUPLA and SP CUPLA of the same size but take heed of flow rate change.

#### Minimum Cross-Sectional Area Model 2S-V-A x 2P-V-A | 3S-V-A x 3P-V-A | 4S-V-A x 4P-V-A | 6S-V-A x 6P-V-A Min. Cross-sectional area

- Do not apply pressure to CUPLA socket or plug while they are disconnected. It will cause leakage or damage.
- Read without fail and observe the "Instruction sheet" that comes with the product and the following pages in the Quick Connect Couplings General Catalog; [Precautions Relating to the Use of All CUPLA] and "CUPLA for Inert Gas" in the [Safety Guide] page.
